New BIM Managers Start Up Guide

Charles H. Berteaux Iv
BIM / VDC / VR Section Manager ATSBU

 @neosymbionic

Join the conversation #AU2017

I am a BIM Manager with 20+ years total experience servicing as an BIM Design Lead, BIM Content Builder, BIM Coordinator, BIM Teacher, experienced in both 2D and 3D production. I bring experience guiding clients from kick off planning, all the way through SDC and VDC, and visualization with High End renderings and VR. Background is Architecture, but I have built-designed content for every discipline.

I also have 20+ years of Graphic Design, Digital Media and Publication experience.

Class Summary

Whether you are looking for a BIM Manager or want a job as a BIM Manager, but you have no idea where to start – This class is for you. Without a doubt, BIM management requires an extremely diverse set of management skills and toolsets. This roll is often called upon to provide tips, tricks, technologies, tools, and strategies to better manage the company's BIM environment. A BIM Manager needs to have the ability to tackle problem identification, problem solving, user motivation, senior management support, budgeting, training program justification, objection handling and more. I hope that this class will give you a few insights and resources to help you hire the BIM Manager you need or give you the resources to be the best BIM Manager possible.

- What is BIM???
- 10 Key Terms
- Roles and Responsibilities
- Salaries
- Integrating with Management & Non-BIM
- Standards and Templates
- Training
- Tools for the Trade
- 8 Steps To Successfully Marketing BIM

Key Learning Objectives

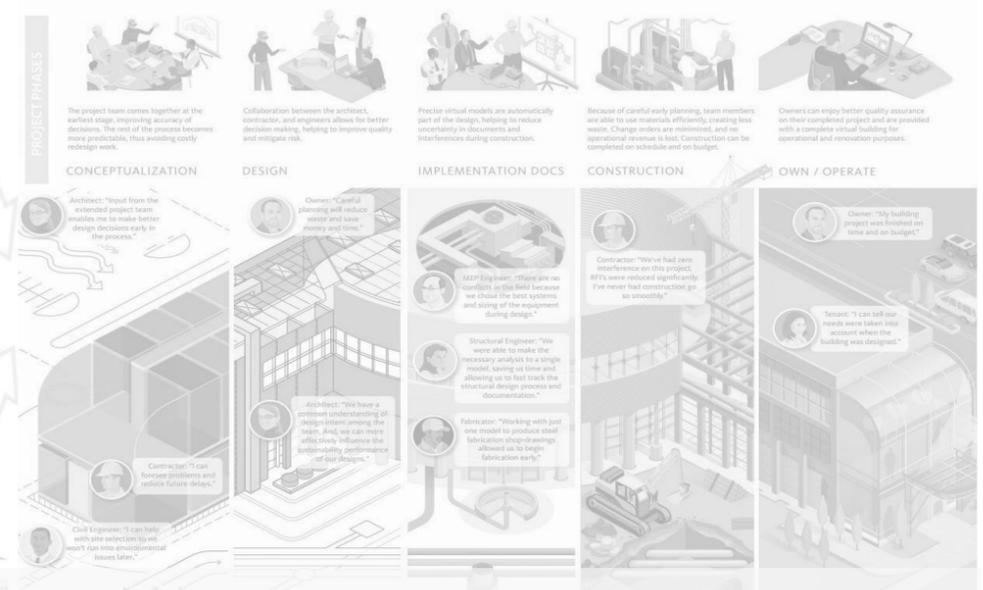

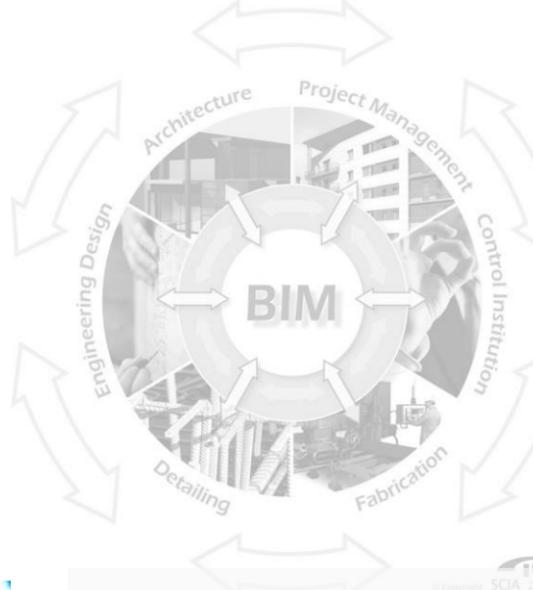

By the end, you will have a better understanding of all the above.

Tekla BIM Integrated Workflow

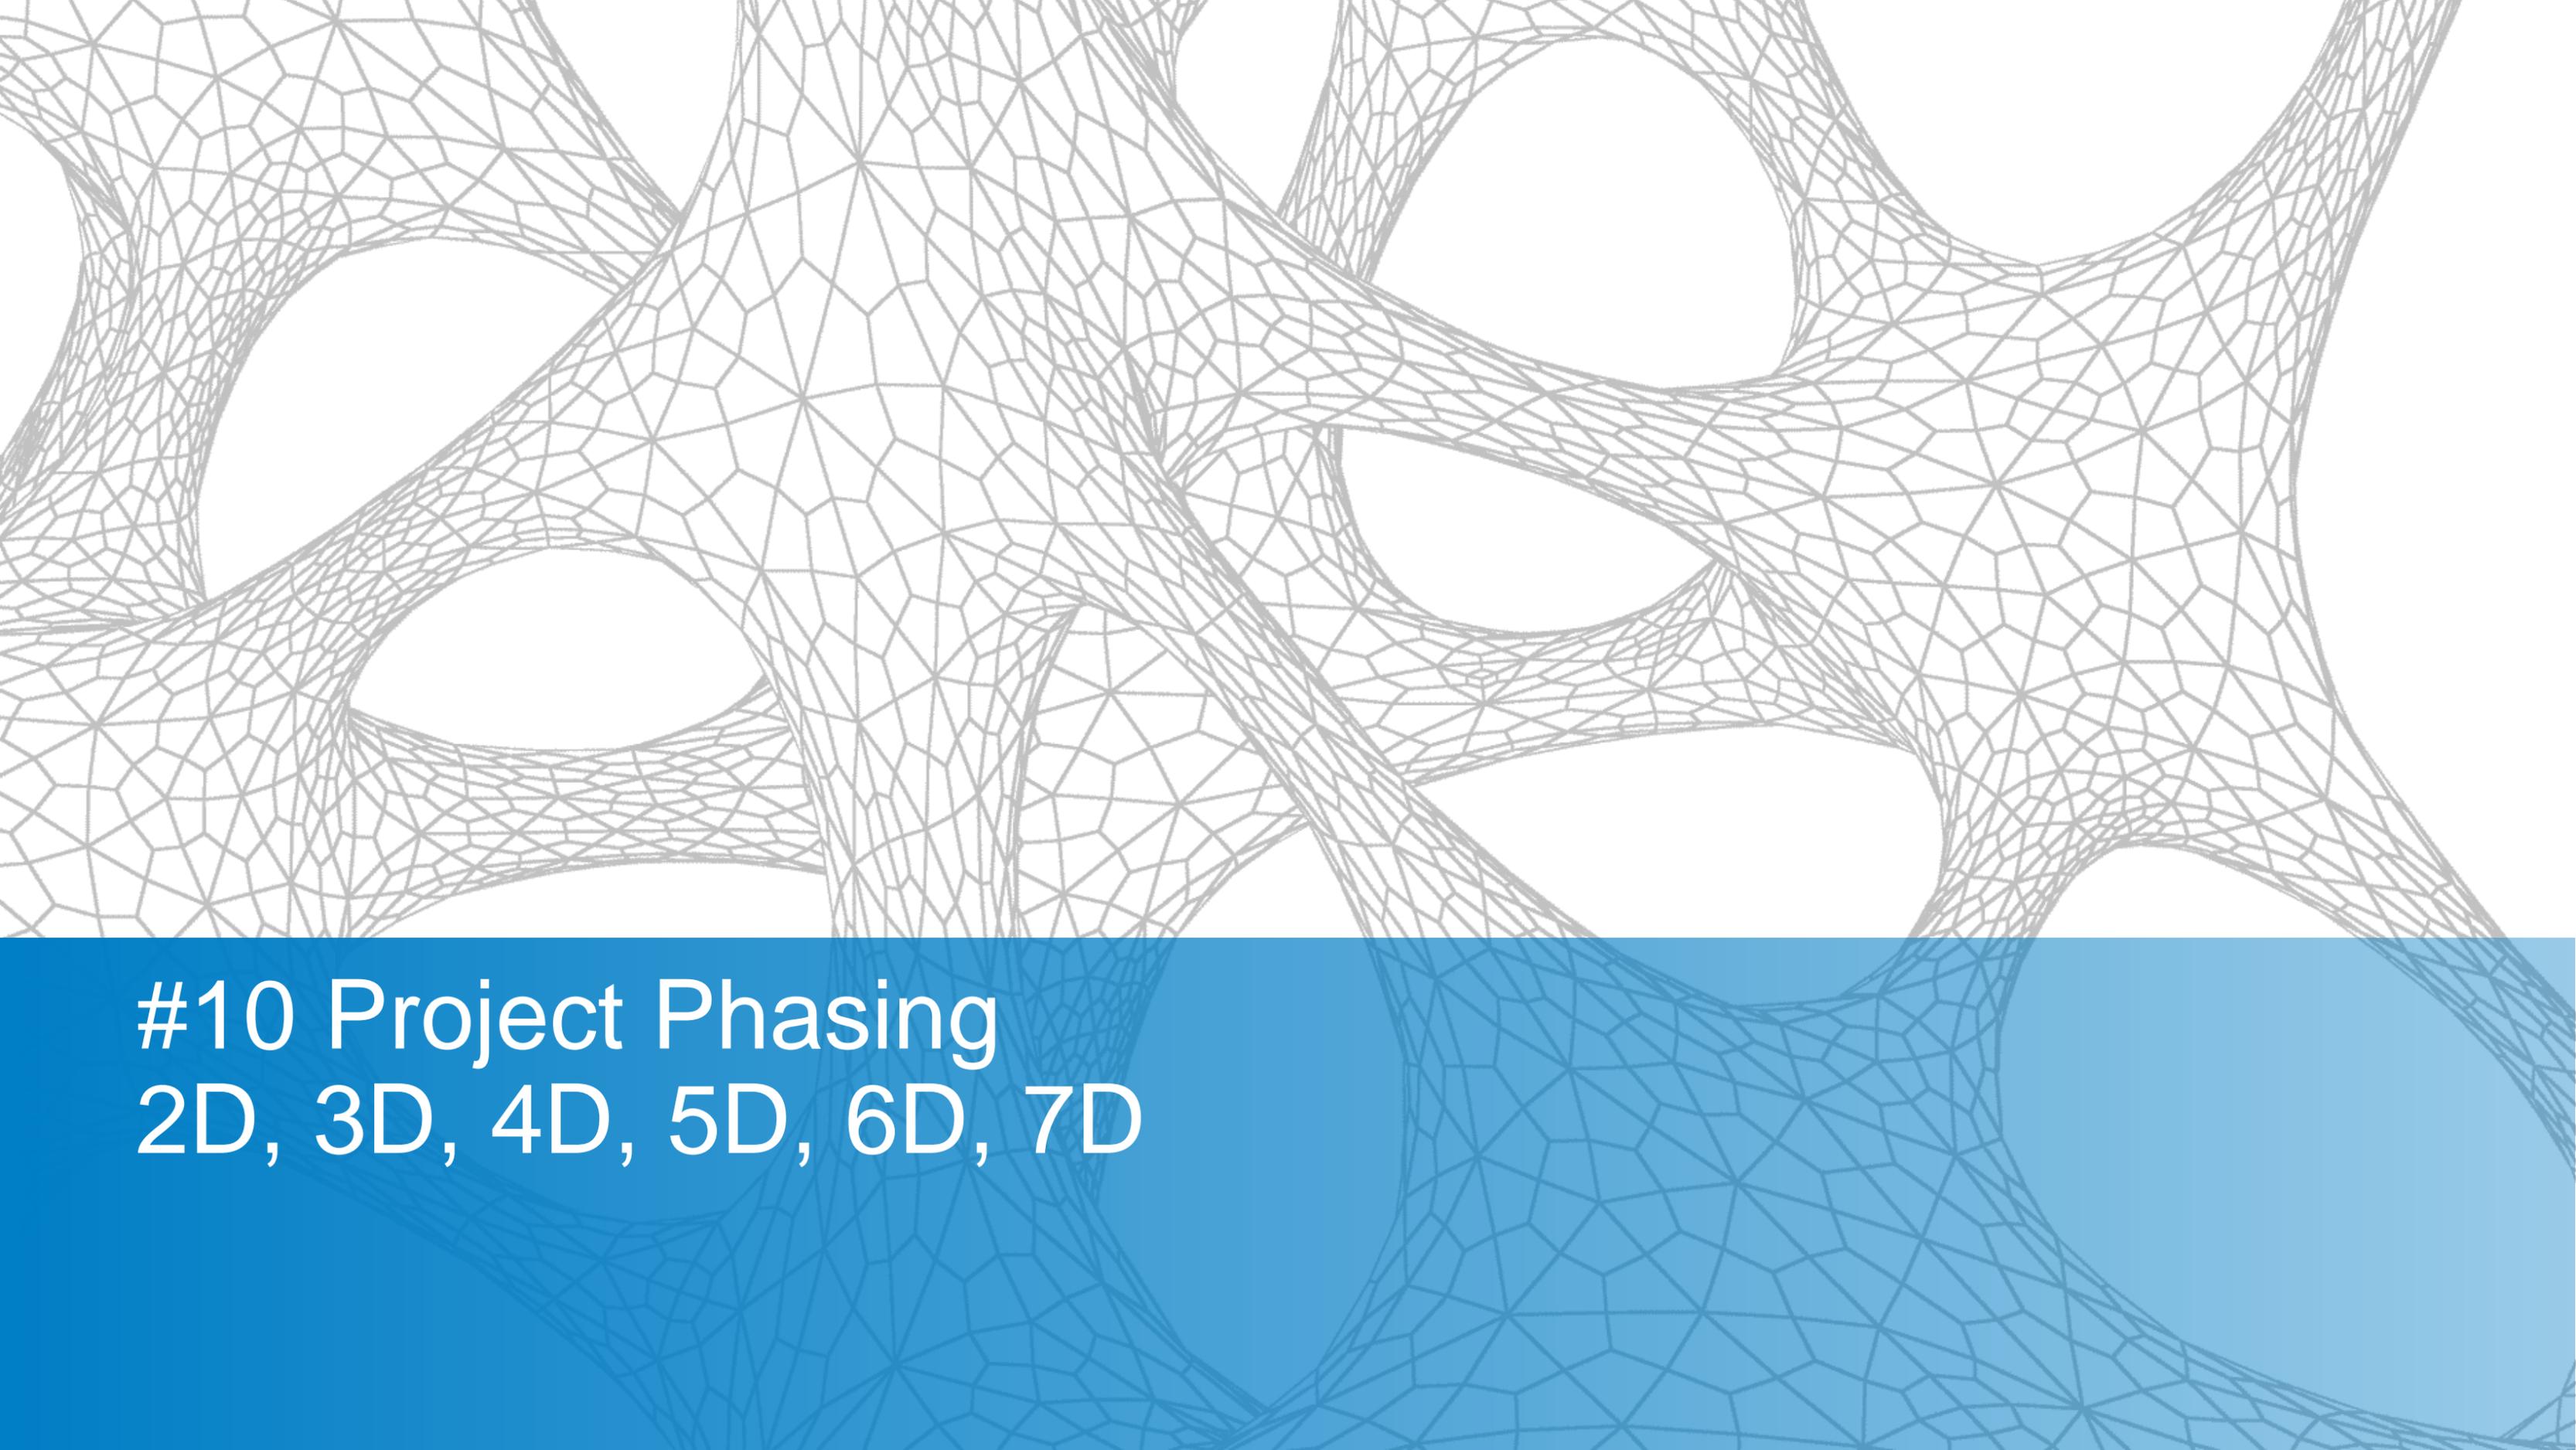

Building information modeling: Building information modeling (BIM) is a process involving the generation and management of digital representations of physical and functional characteristics of places. Building information models (BIMs) are files (often but not always in proprietary formats and containing proprietary data) which can be exchanged or networked to support decision-making about a physical place.

10 Key Terms Every BIM Manager Should Know

#10 Project Phasing

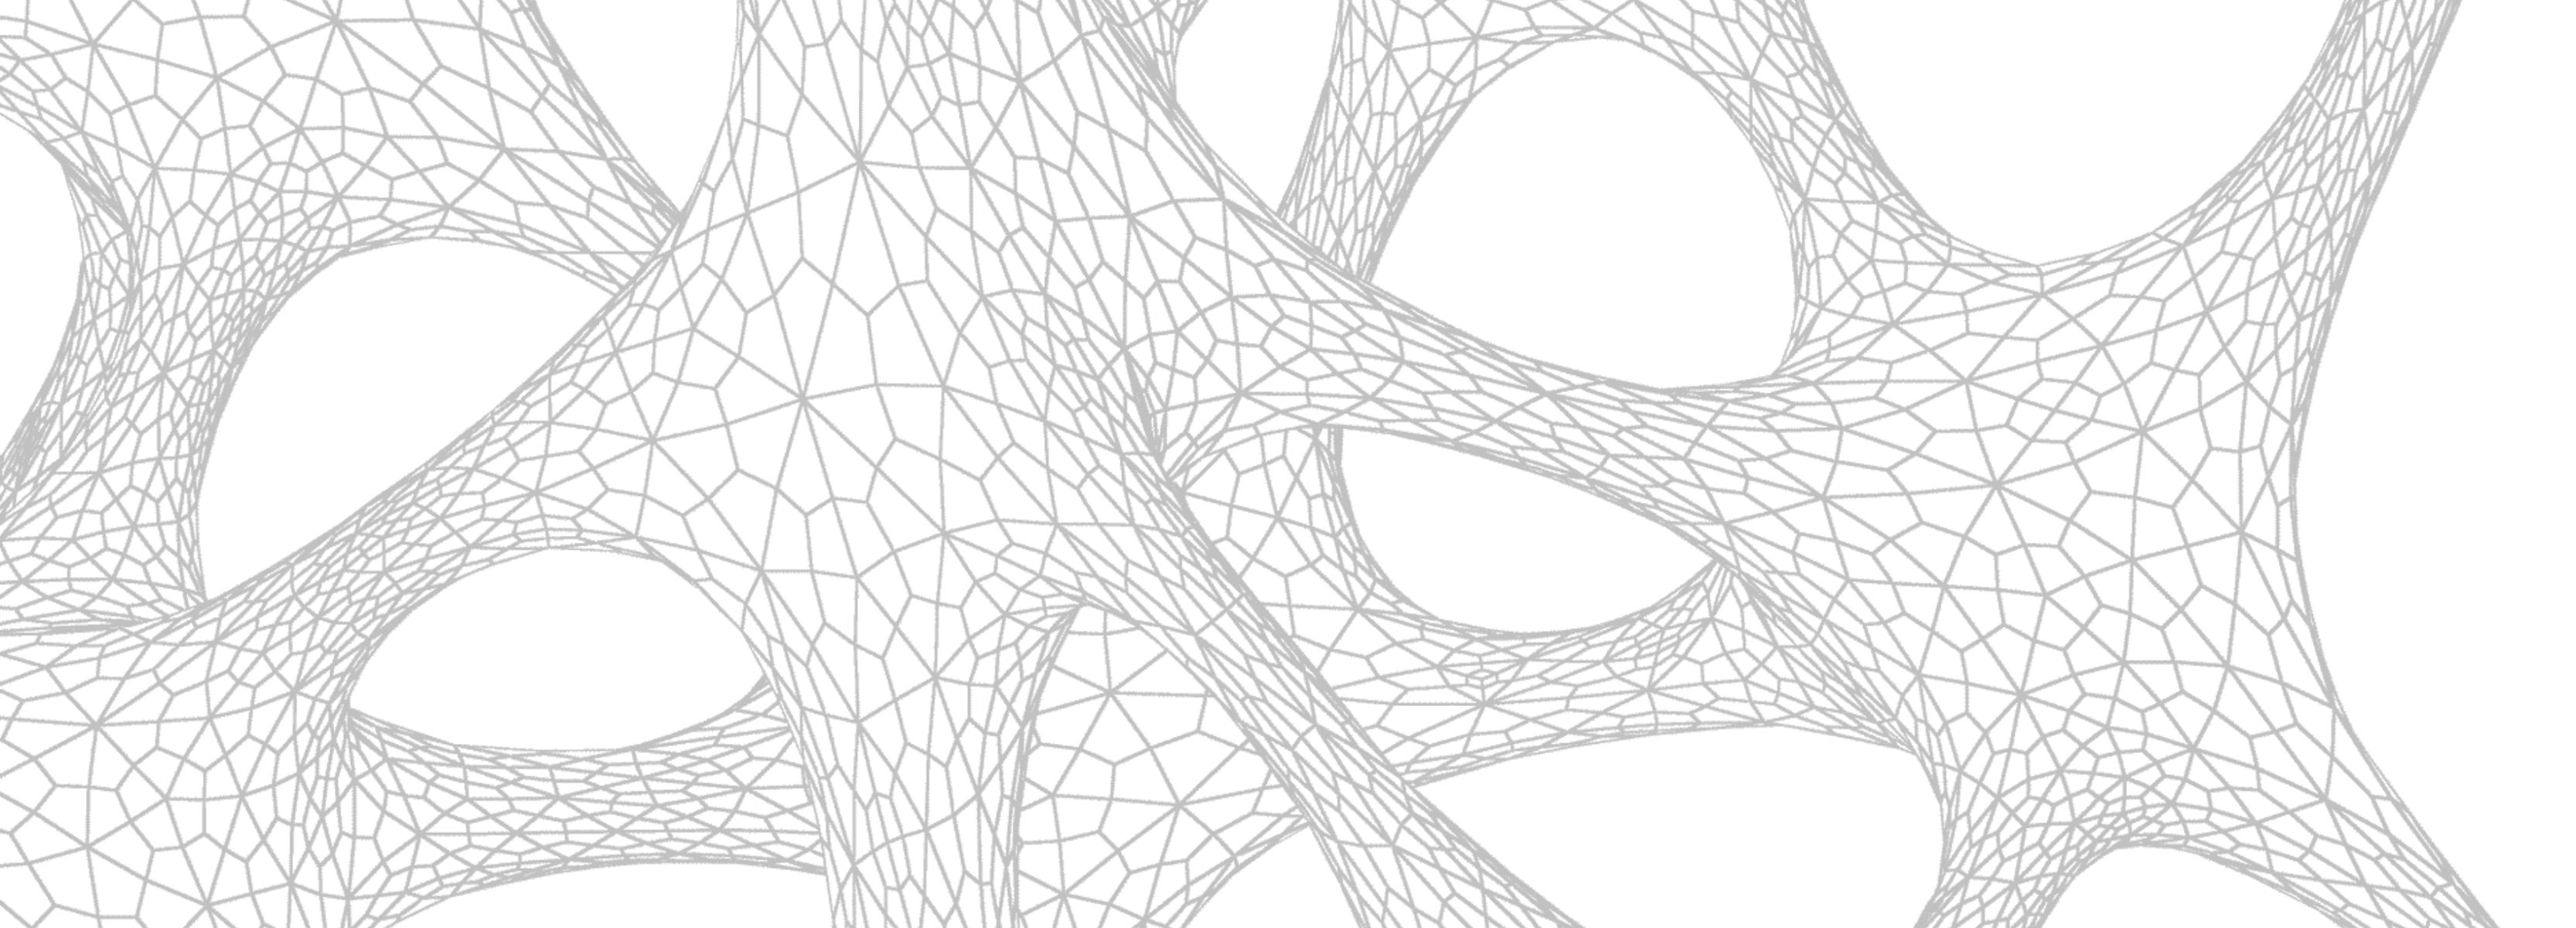

2D, 3D, 4D, 5D, 6D, 7D

7D

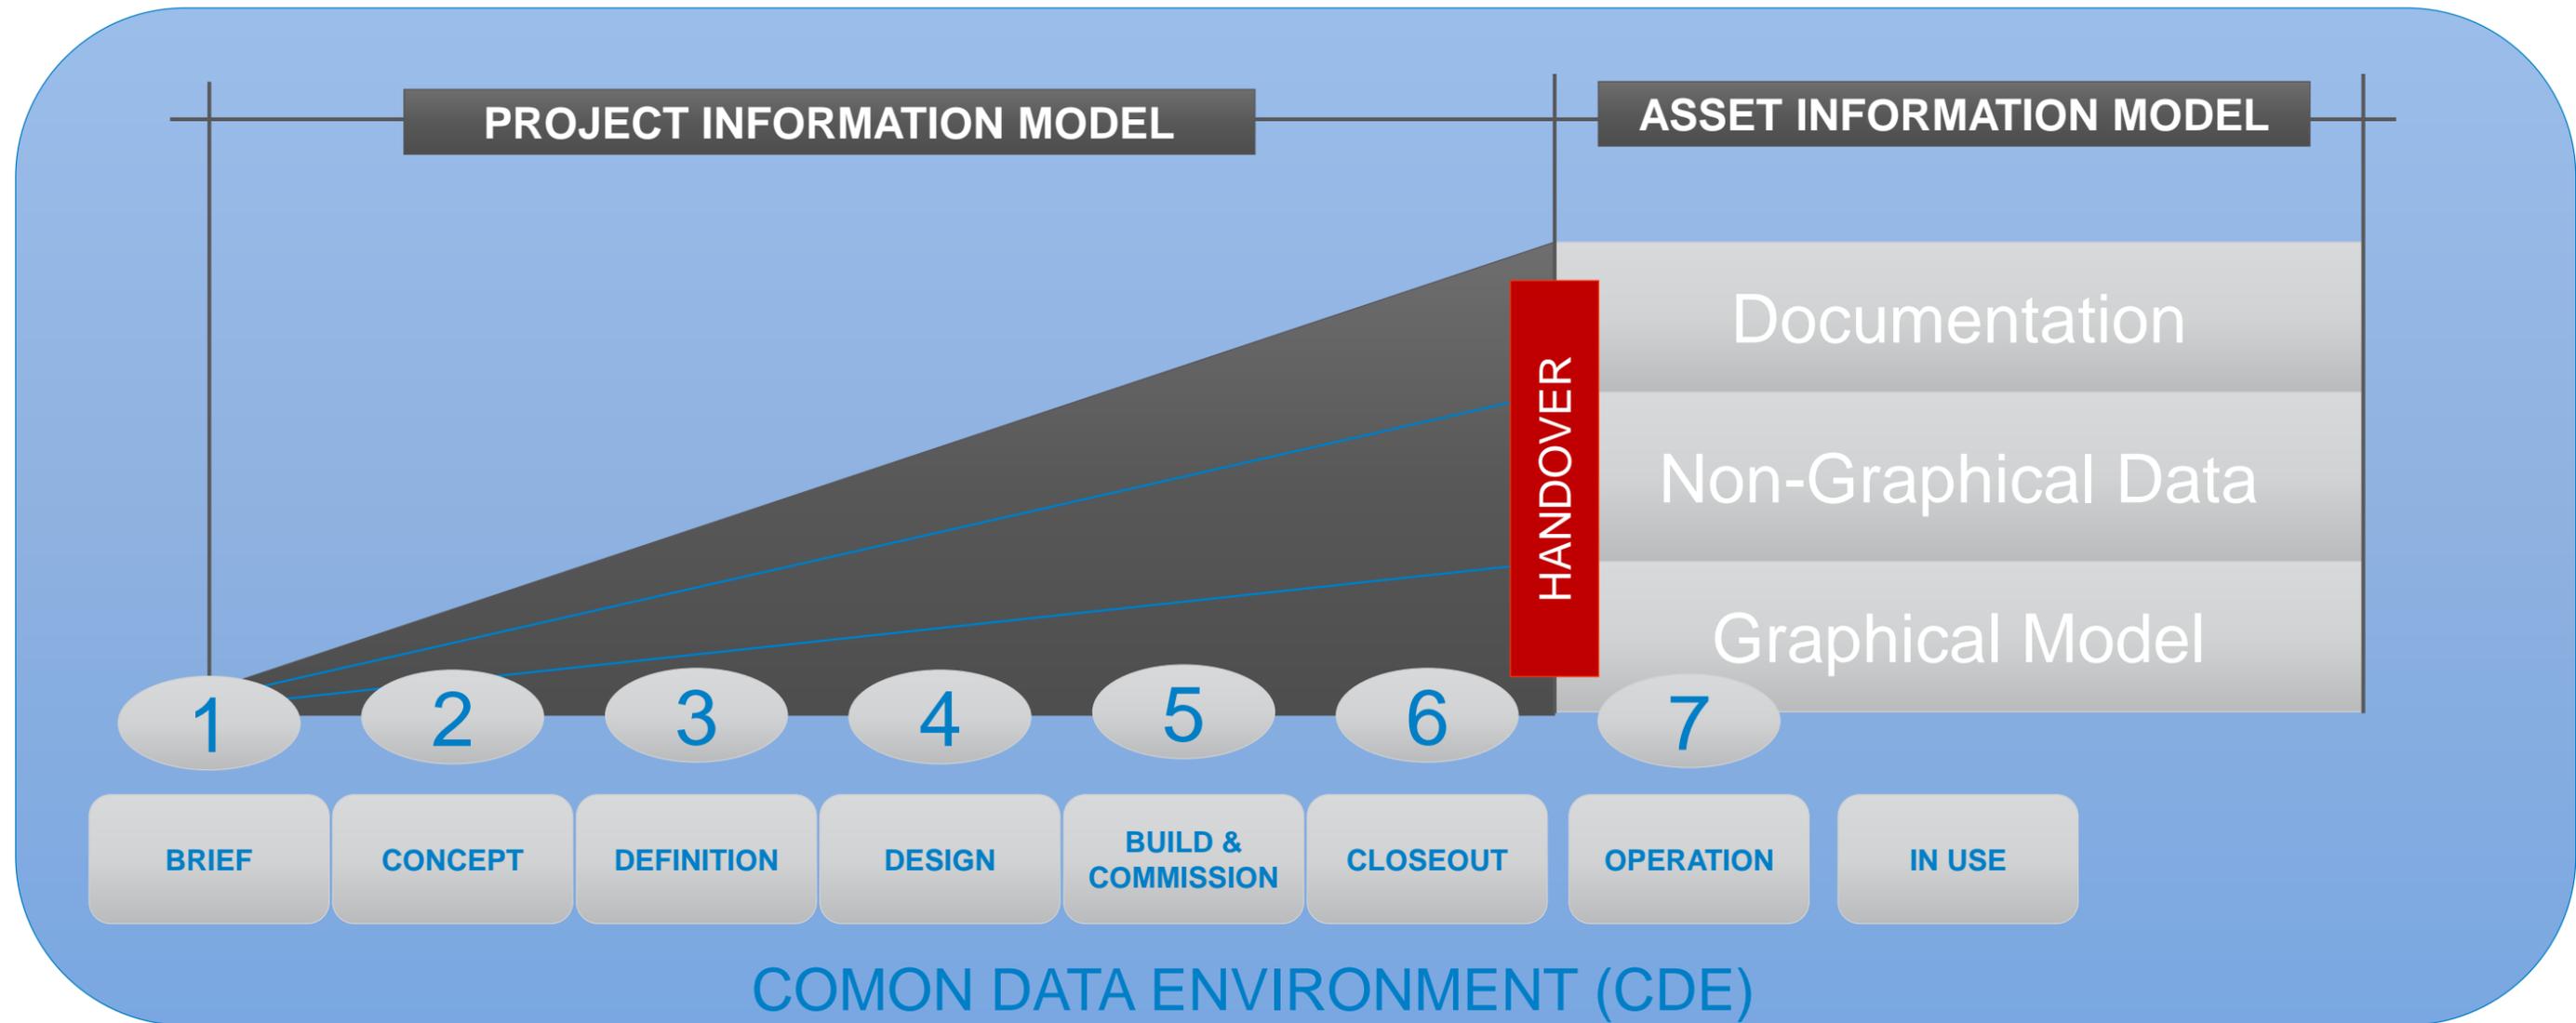

FACILITY MANAGEMENT

- ☒ BIM Life Cycle Strategies
- ☒ BIM As-Builts
- ☒ BIM O&M Manuals
- ☒ COBie Data
- ☒ BIM Maintenance Plans
- ☒ Smart BIM Facilities

#09 Model Types
PIM (Project) and AIM (Asset) Information Models

The background features a complex, light gray wireframe mesh that forms a series of interconnected, flowing shapes, resembling a stylized 'S' or a series of connected loops. The mesh is composed of numerous small, irregular polygons. A solid blue horizontal bar is positioned at the bottom of the image, containing white text.

#08 Project Planning CDE (Common Data Environment)

All Projects

MY PROJECTS | PINNED | ALL | ACTIVE | NEW | SUGGESTED

 **RC Car Project** 

Carboy sour/acidic, seidel pitching, rein heit sgebot adjunct, mouthfeel wheat beer glass.
Gravity hops bottle conditioning, * top-fermenting yeast

 23 More > |  18  20  44

 **Vacuum Cleaner Study**

 **Grantham Robotics**

Carboy sour/acidic, seidel pitching, rein heit sgebot adjunct, mouthfeel wheat beer glass.
Gravity hops bottle conditioning, * top-fermenting yeast

 |   18  20  44

 **Articulated Radii**

Carboy sour/acidic, seidel pitching, rein heit sgebot adjunct, mouthfeel wheat beer glass.
Gravity hops bottle conditioning, * top-fermenting yeast

 |   18  20  44

 **Forklift**

 **Dobson Engineering**

Carboy sour/acidic, seidel pitching, rein heit sgebot adjunct, mouthfeel wheat beer glass.

The background features a complex, light gray wireframe mesh that forms a series of interconnected, flowing, and somewhat chaotic shapes. This mesh is set against a plain white background. A solid blue horizontal bar spans the bottom portion of the image, providing a contrasting background for the white text.

#06 Contract Documents AIA or BIM Level2

The American Institute of Architects

E203-2013 – Building Information Modeling and Digital Data Exhibit

Purpose: To encourage the useful sharing of Digital Data by providing the project participants a way to establish the framework and expectations regarding the creation, sharing, and use of Digital Data on the project.

G201-2013 – Project Digital Data Protocol Form

Purpose: To allow the project participants to document the Digital Data protocols for the project, exclusive of specific Modeling requirements.

G202-2013 – Project Building Information Modeling Protocol Form

Purpose: To record the parties intentions regarding the use of Modeling on the project, the anticipated uses of the model and other basic assumptions about the roles and responsibilities of all parties.

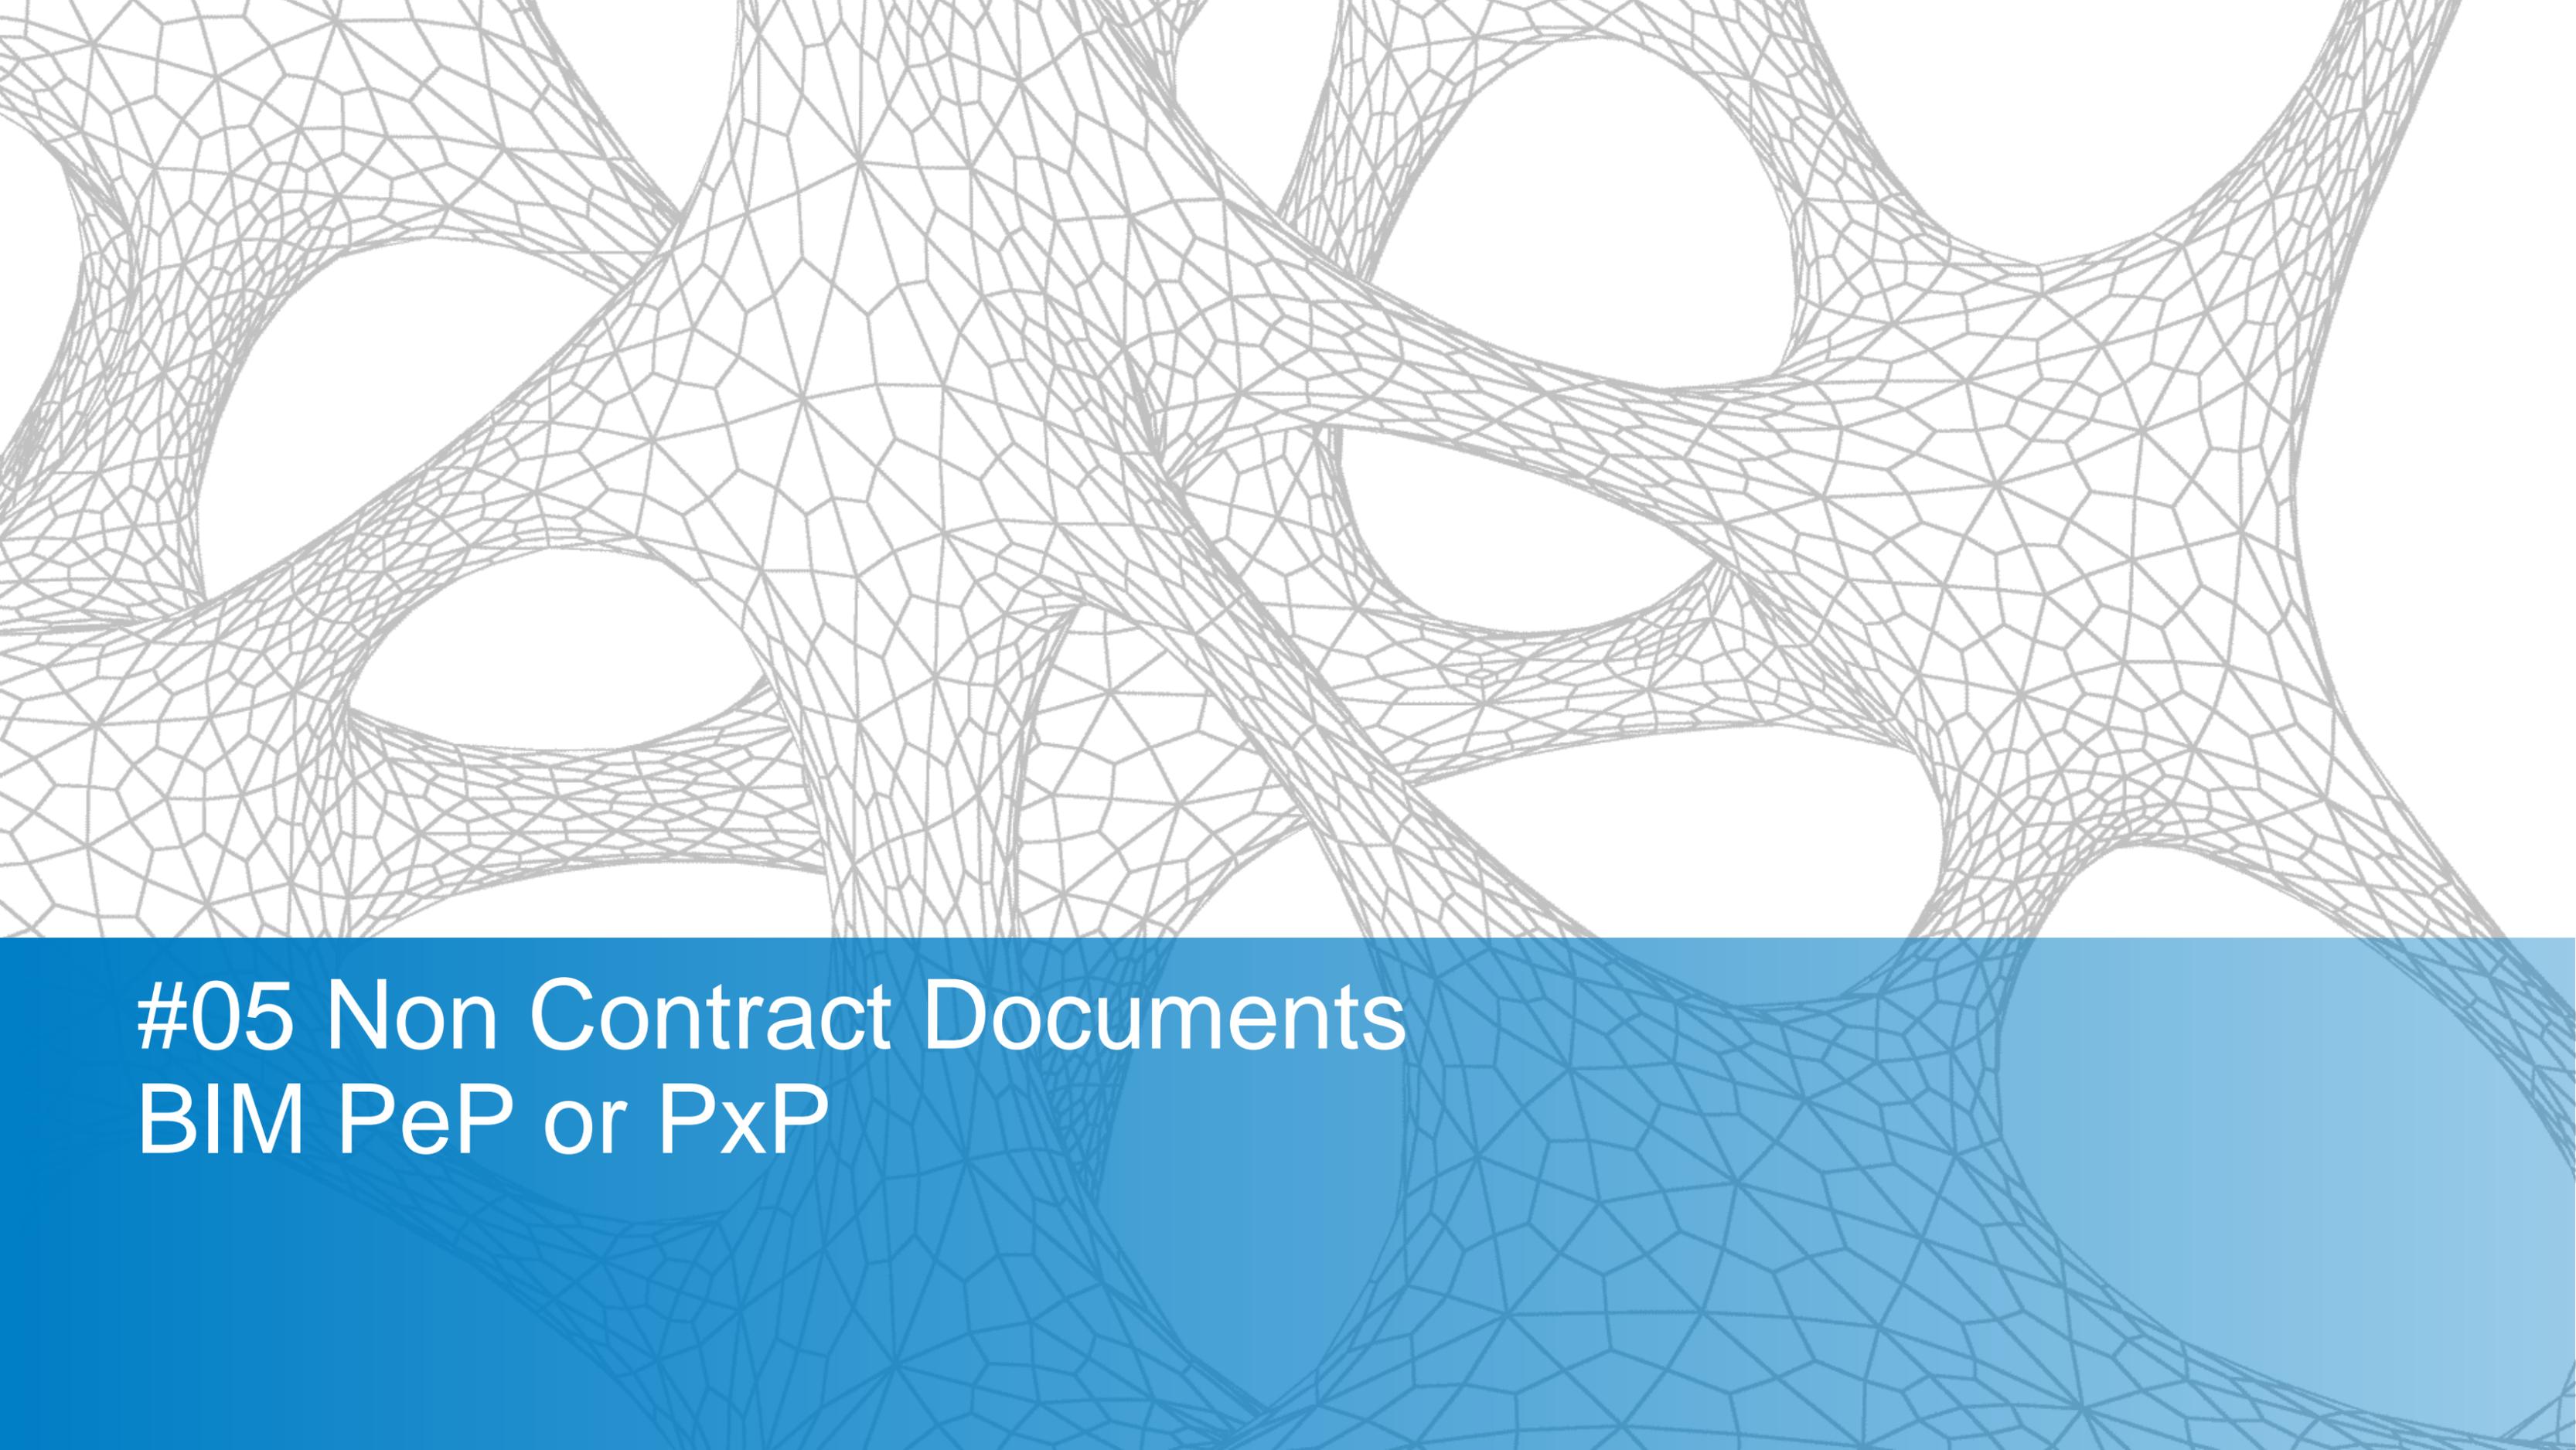

<http://bim-level2.org/>

The UK Construction Industry Council (CIC) developed the documents that can be used to enable the model to be a contractual deliverable – the CIC BIM Protocol. This is due to be updated this year.

- CIC BIM Protocol
- BIM protocol appendix 1
- BIM protocol appendix 2

Supplementary guidance can be found on the BIM Level 2 website including:

- Introduction to commercial documents
- Outline Scope of Services for the role of Information Management
- Best Practice Guide for Professional Indemnity Insurance when using BIM

The background features a complex, light gray wireframe mesh that forms a series of interconnected, flowing, and somewhat chaotic shapes. This mesh is set against a plain white background. A solid blue horizontal bar spans the bottom portion of the image, containing white text.

#05 Non Contract Documents BIM PeP or PxpP

Identify BIM Goals and Uses

Use project and team characteristics to determine BIM Goals and Uses for the project

Design BIM Execution Process

Develop a process which includes tasks supported by BIM along with information exchanges

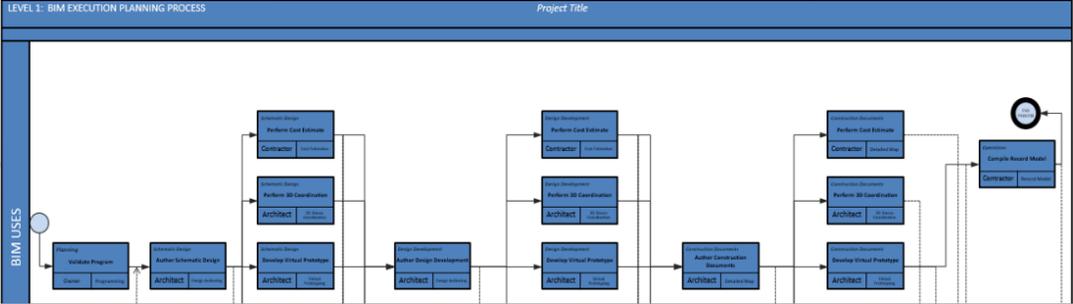

Develop Information Exchange Requirements

Develop the information content, parties responsible, grouping, and schedule for each exchange

Define Supporting Infrastructure for BIM Implementation

Define the infrastructure required to support the developed BIM process

Delivery Strategy

Communication Procedures

Technology Infrastructure

Model Quality Control Procedures

The background of the slide is a complex, abstract wireframe mesh structure. It consists of numerous interconnected lines forming a series of organic, flowing shapes that resemble a stylized 'S' or a series of connected arches. The lines are thin and light gray, set against a white background. The overall effect is one of digital complexity and interconnectedness.

#04 IPD with BIM Integrated Project Delivery

A project delivery method that integrates people, systems, business structures and practices into a process that collaboratively harnesses the talents and insights of all participants to optimize project results, increase value to the owner, reduce waste, and maximize efficiency through all phases of design, fabrication, and construction. IPD represents a return to the "Master Builder" concept where the entire building team including the owner, architect, general contractor, building engineers, fabricators, and subcontractors work collaboratively throughout the life cycle of the building.

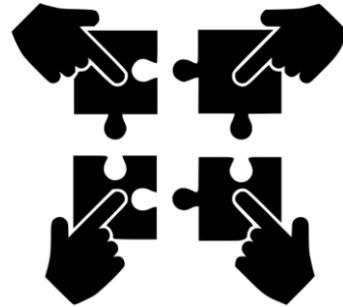

8 Keys to IPD:

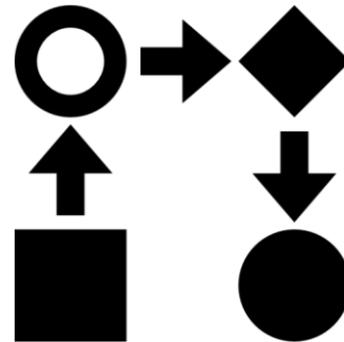

Involve all team members in design meetings including trades and contractors

Institute Building Information Modeling

Facilitate Collaboration

Setup contract mechanisms that enable open collaboration

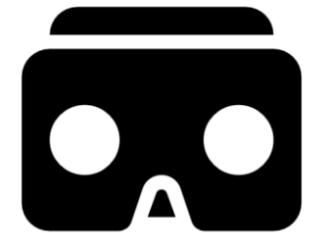

Minimize paper based processes and collaborate digitally

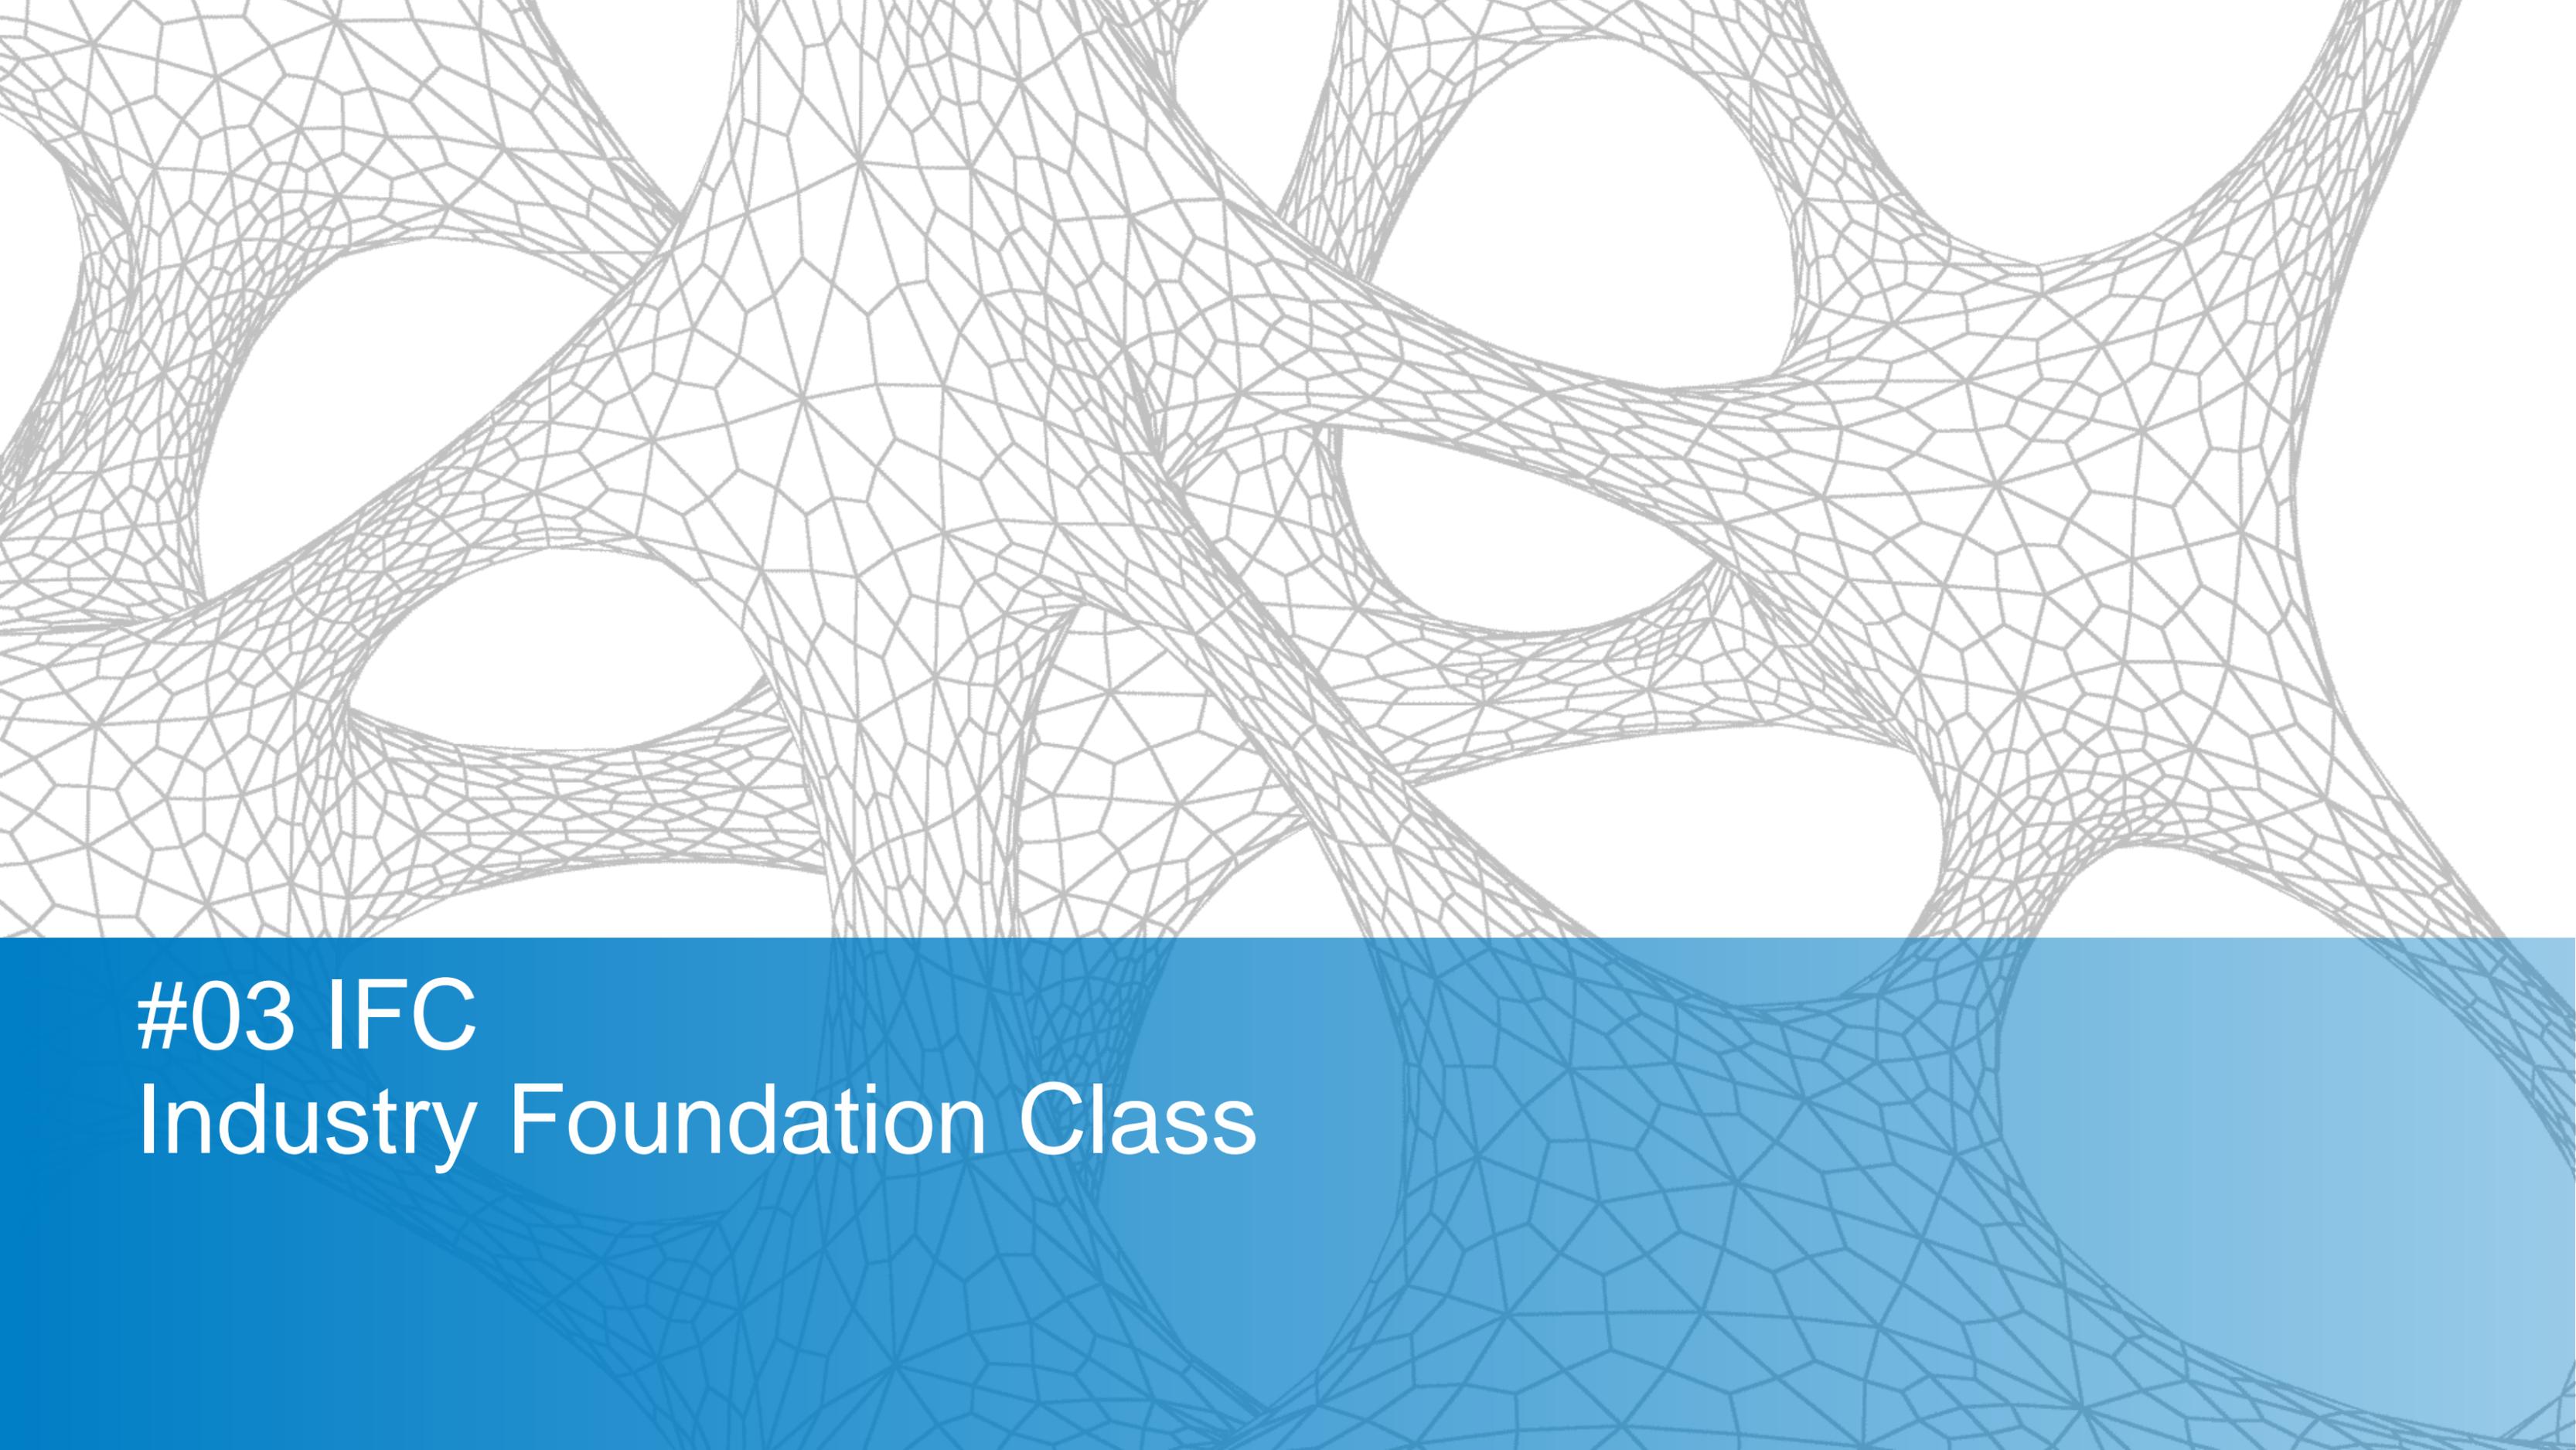

Check for and manage interferences between trades digitally

Create a culture of trust and sharing

Communicate design ideas using 3D visualization to keep everyone aligned

The background features a complex, three-dimensional wireframe mesh structure. The mesh is composed of numerous interconnected lines forming a series of curved, interconnected shapes that resemble a stylized, abstract architectural or organic form. The lines are thin and light gray, set against a plain white background. A solid blue horizontal bar spans the bottom portion of the image, providing a contrasting background for the white text.

#03 IFC
Industry Foundation Class

WHAT???

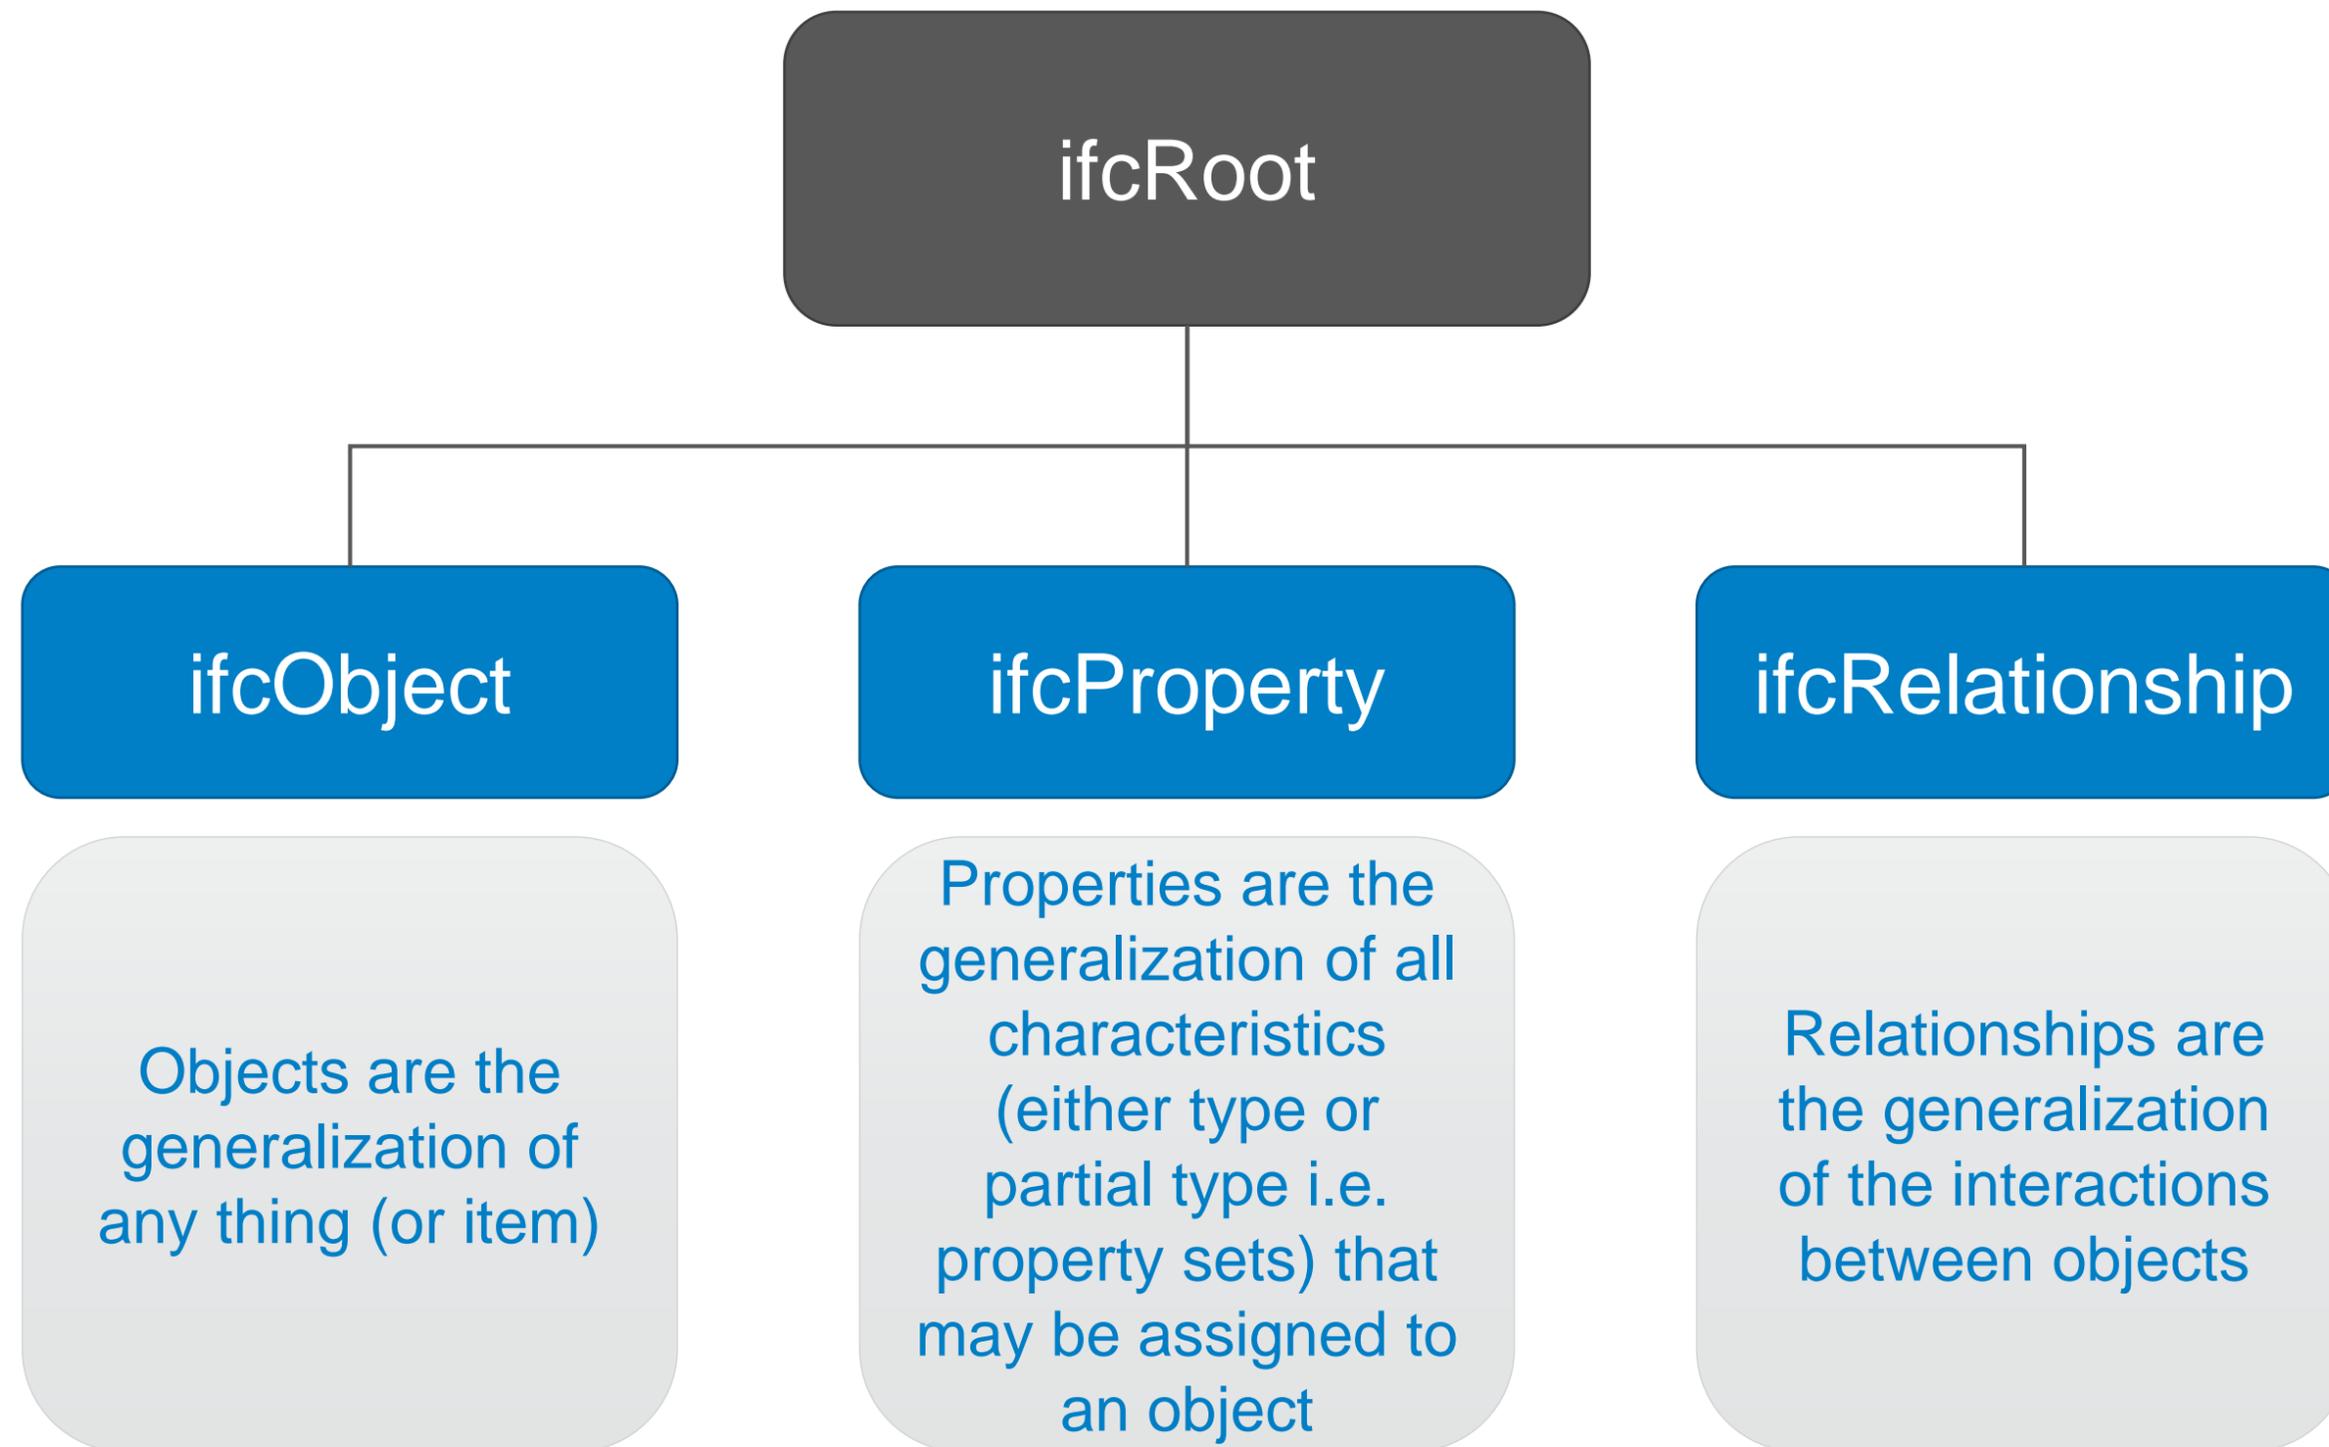

Industry Foundation Classes (IFC) is a neutral and open specification that is not controlled by a single vendor or group of vendors. It is an object-based file format with a data model developed by buildingSMART to facilitate interoperability in the building industry OR is a neutral and open specification, object-based file format with a data model developed by building SMART to facilitate interoperability in the architecture, engineering and construction (AEC) industry

WHO??

The IFC initiative began in 1994, when Autodesk formed an industry consortium to advise the company on the development of a set of C++ classes that could support integrated application development. Twelve US companies joined the consortium. These companies included AT&T, HOK Architects, Honeywell, Carrier, Tishman and Butler Manufacturing.

Initially named the Industry Alliance for Interoperability, the Alliance opened membership to all interested parties in September, 1995 and changed its name in 1997 to the International Alliance for Interoperability. The new Alliance was reconstituted as a non-profit industry-led organization, with the goal of publishing the Industry Foundation Class (IFC) as a neutral AEC product model responding to the AEC building lifecycle. A further name change occurred in 2005, and the IFC specification is now developed and maintained by:

#02 COBie
Construction Operations Building Information Exchange

COBie What?

- COBie is an information exchange specification for the life-cycle capture and delivery of information needed by facility managers. COBie can be viewed in design, construction, and maintenance software as well as in simple spreadsheets. This versatility allows COBie to be used all projects regardless of size and technological sophistication
- The COBie specification identifies the content of the information that must be captured and exchanged at each phase of the project to begin to reduce the waste associated with the current paper process. The designer is required to provide the space layout, system list, types of equipment, and the location of named equipment. The builder adds equipment make, model and serial number and provides manufacturer literature, warranty and replacement parts information. The commissioning agent provides the job plan data with associated tools, training and equipment requirements

#01 Data Manager

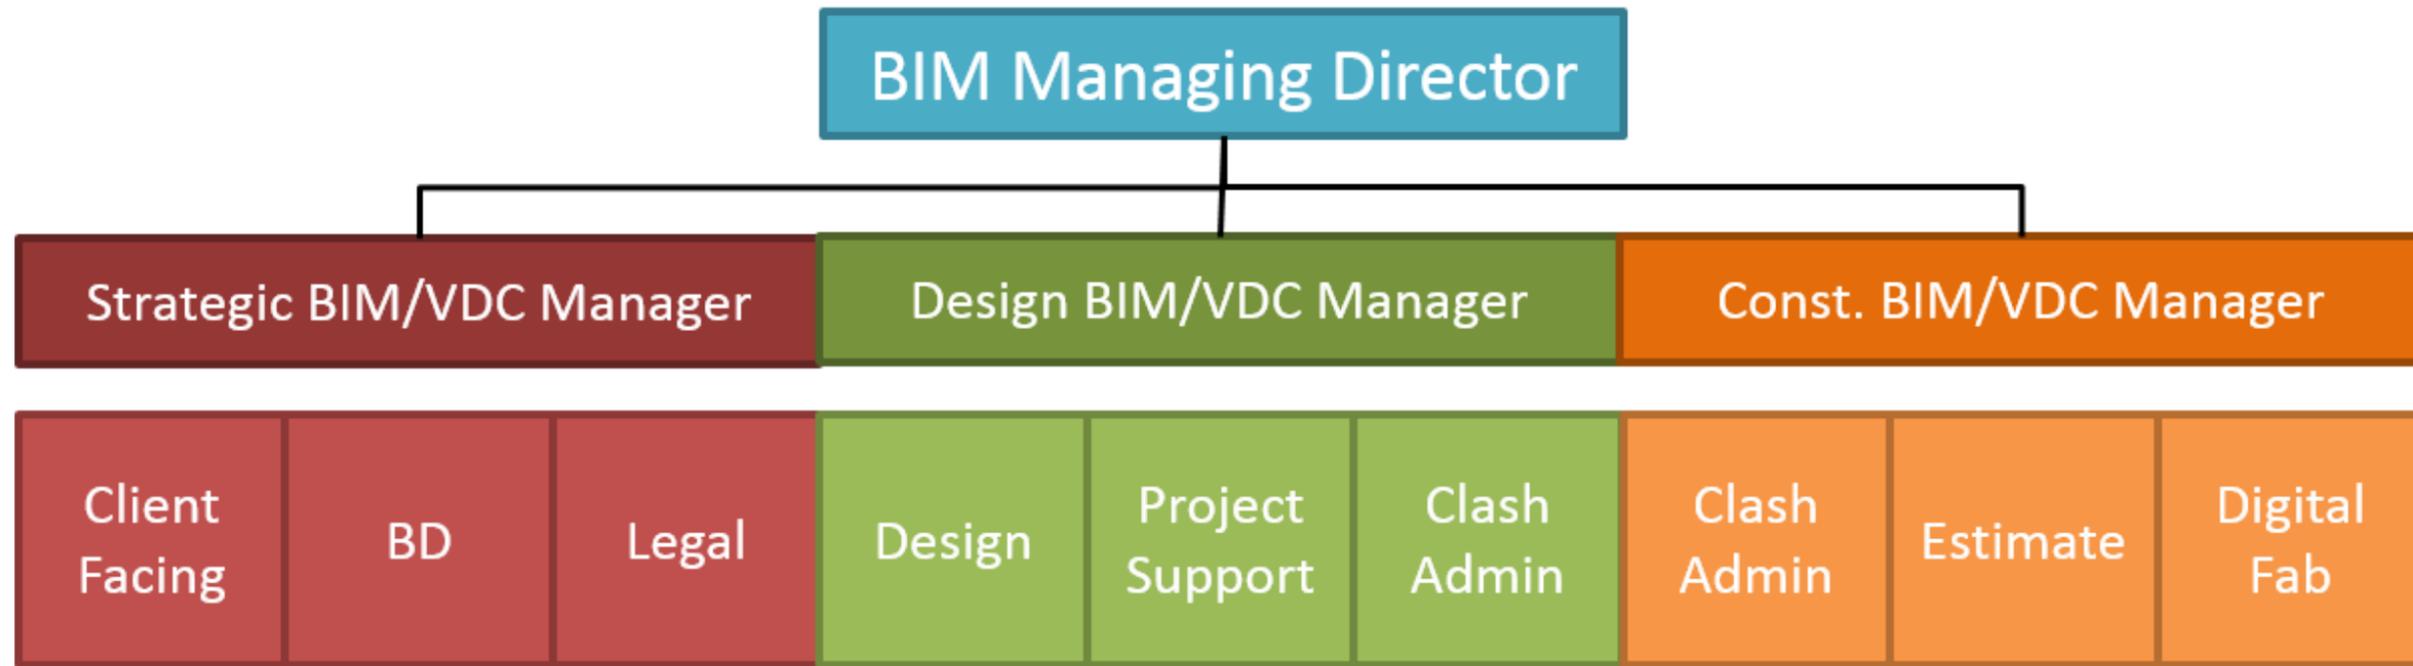

YOU

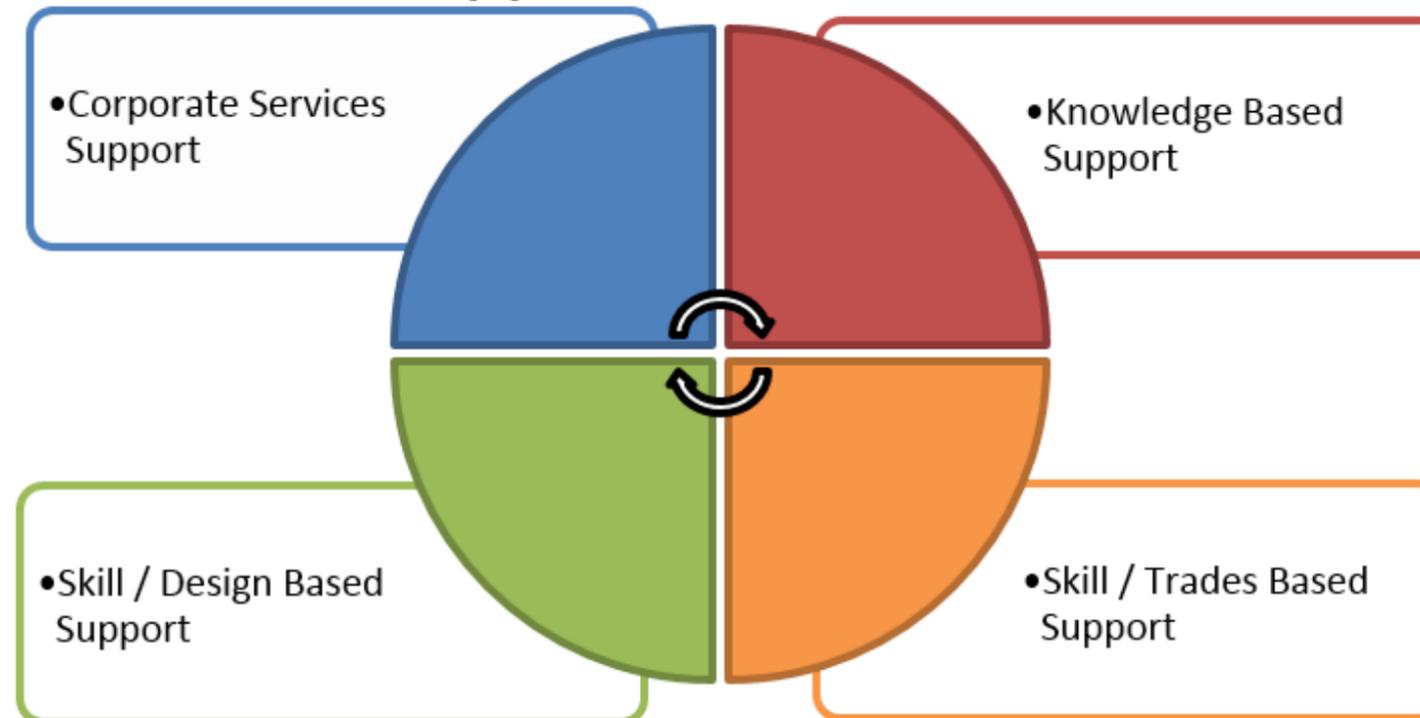

The background of the slide is a complex, abstract wireframe structure. It consists of a dense network of thin, grey lines that form a mesh of irregular polygons. This mesh is distorted and warped, creating a sense of depth and movement, similar to a 3D wireframe model of a fluid or a complex organic structure. The lines are more densely packed in some areas and more sparse in others, creating a textured, almost crystalline appearance. A solid, dark grey horizontal bar runs across the bottom third of the image, providing a clear area for the text.

Roles and Responsibilities

Position Infrastructure:

Support Breakdown

Strategic BIM Manager

Client
Facing

In our business, client facing staff, such as senior managers and business developers, spend a great deal of effort establishing and fostering relationships with new / existing clients. They need to stay on top of new trends within the industry and understand BIM in order to speak the language, share your future vision and make achievable promises.

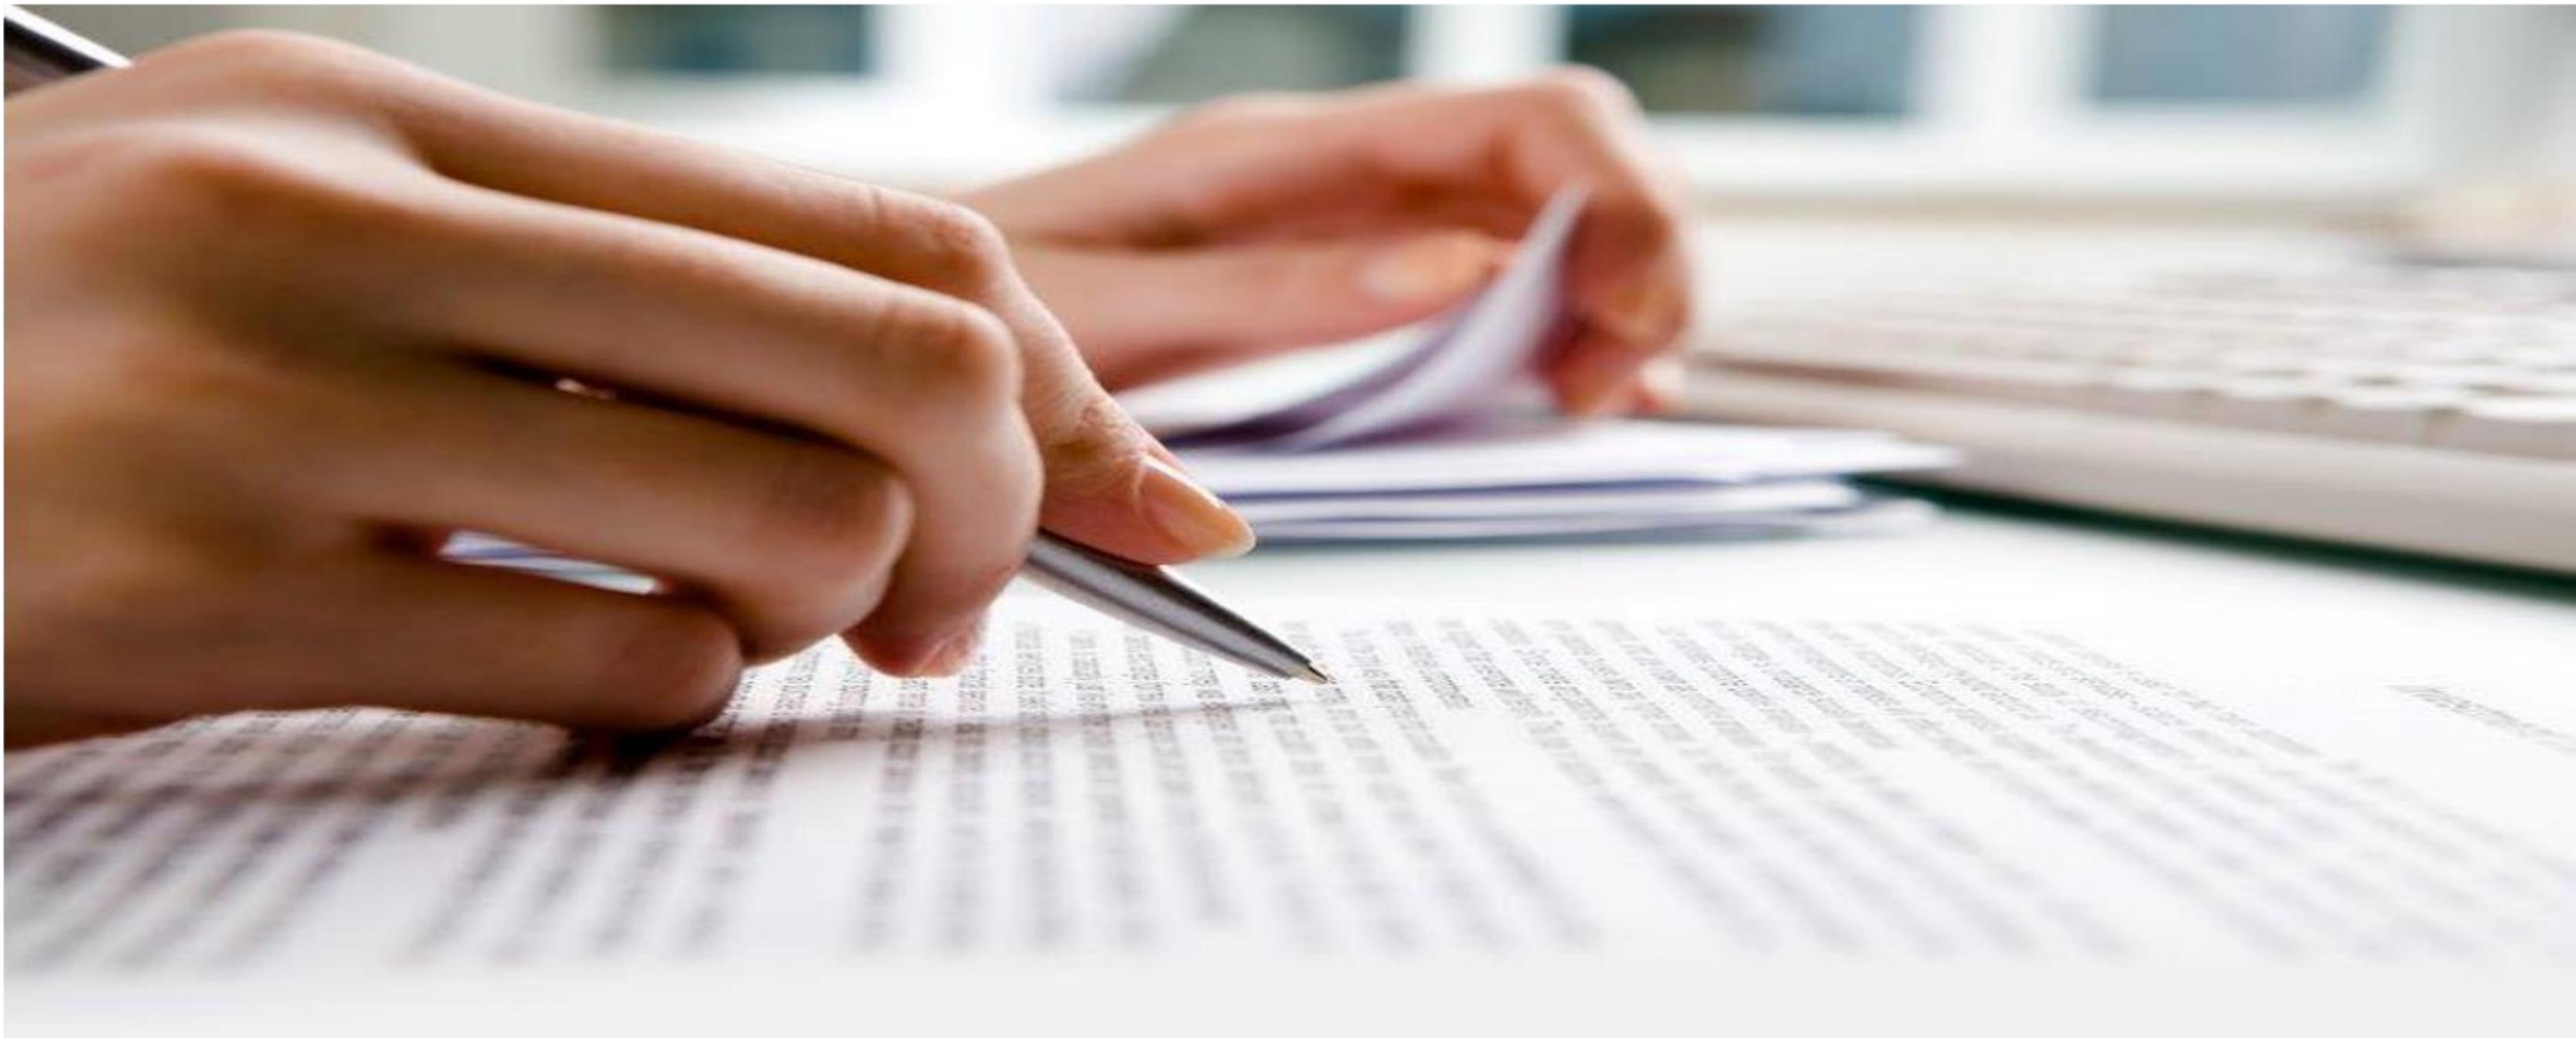

BD

Business development is the creation of long-term BIM values for an organization from customers, markets, and relationships. At its heart, BIM business development is all about figuring out how the interactions of those forces combine together to create opportunities for growth.

Business Development

In writing your BIM scope and documents, there are several legal considerations. You should guide your legal team to update contracts and create content that deals with BIM scope, otherwise you are not protected. This includes roles & responsibilities, BIM process & collaboration management, data-release-forms and proprietary data protection. Finally defining BIM on a project and aligning expectations with client and team all the way to the finest details such as model detail granularity.

Design BIM Manager

Design

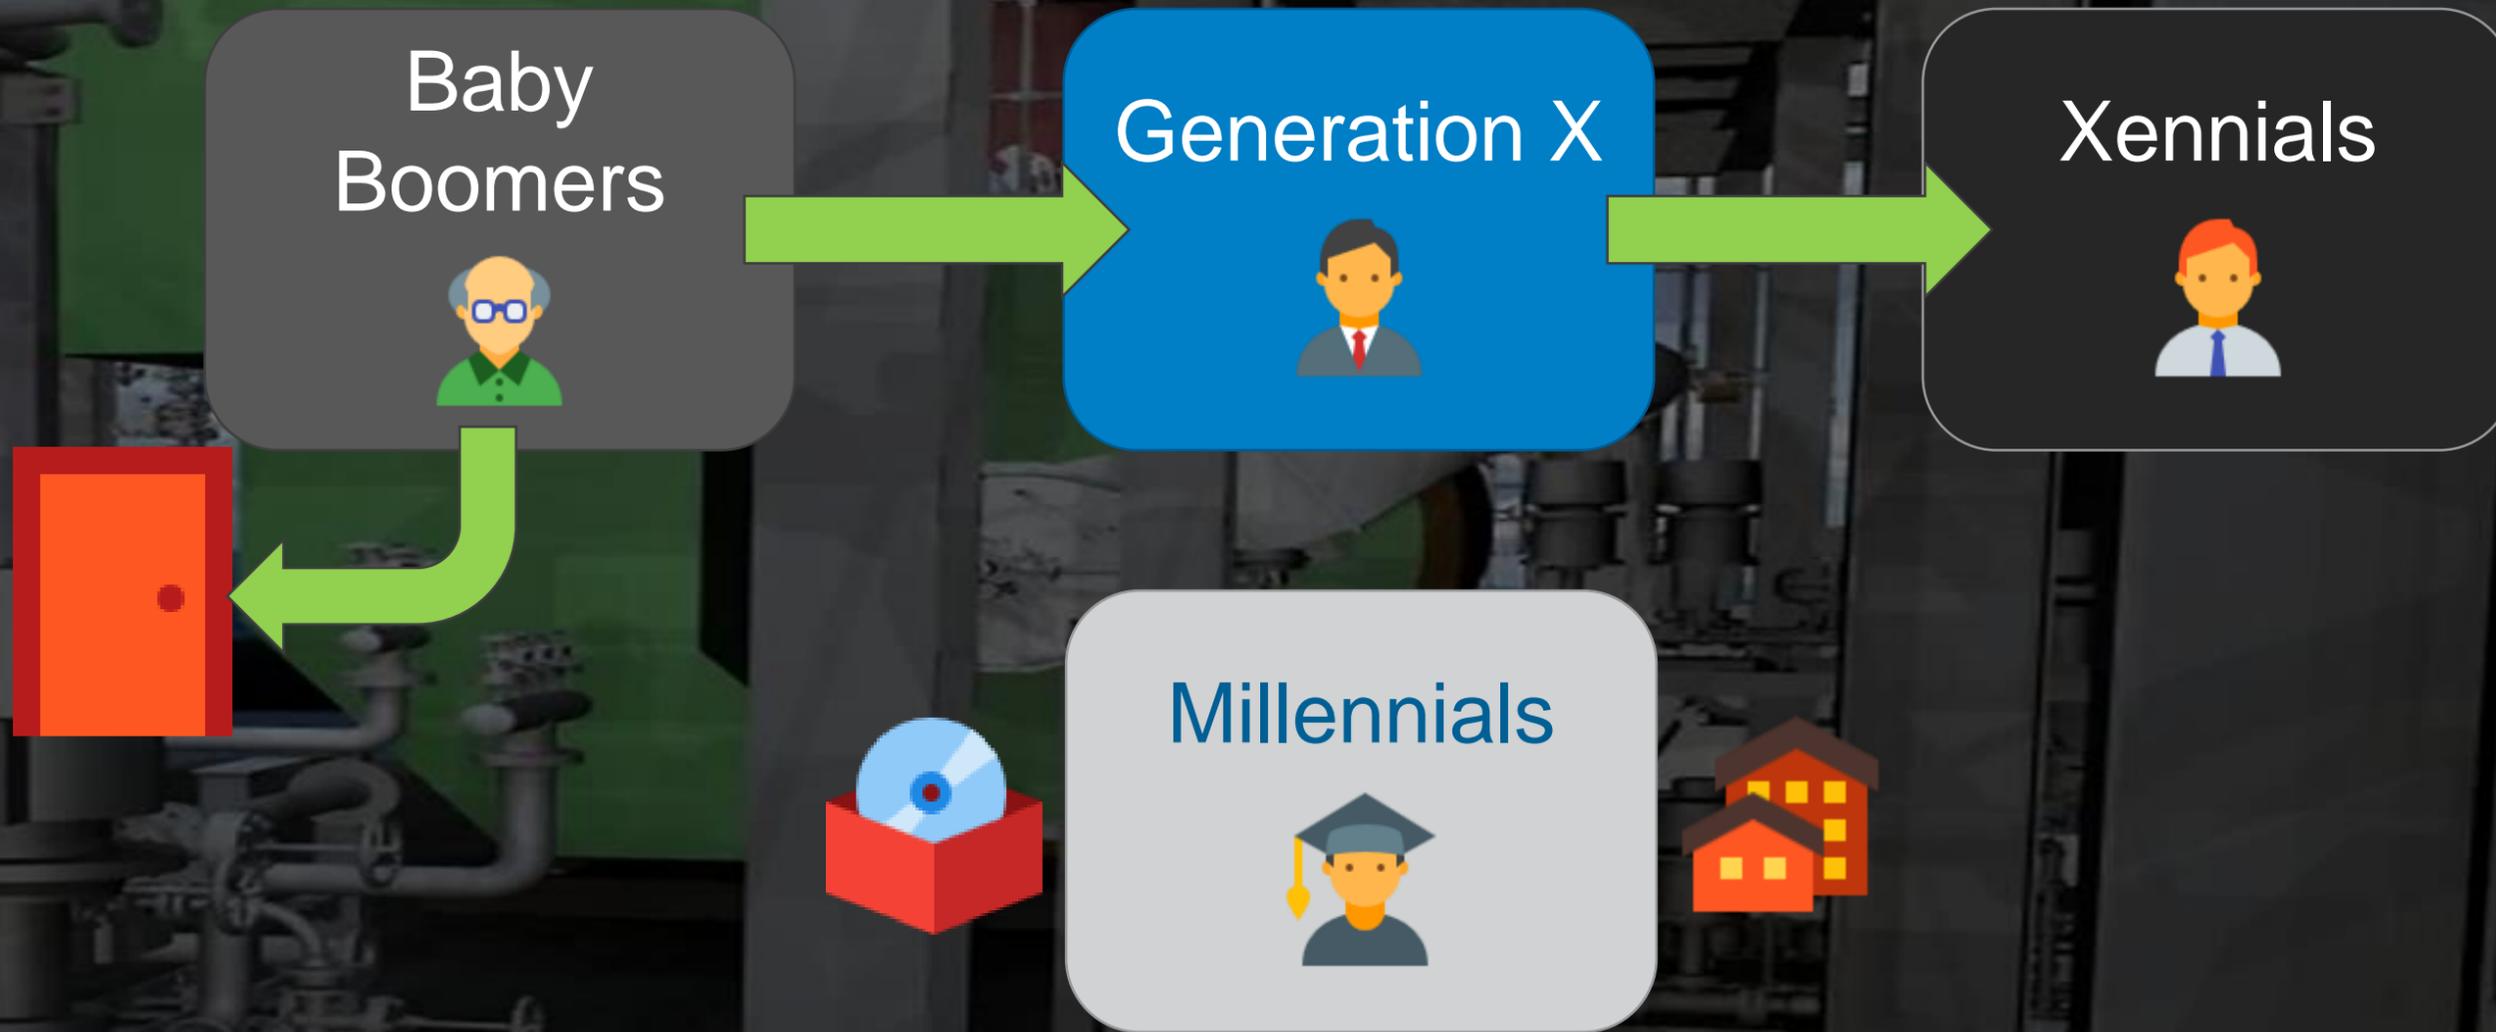

Employees, want to know what their expectations are and their involvement on projects. In addition if you want them accountable, you must give them the proper tools and define their specific roles to achieve success. The sum of the parts = the whole.

Design BIM Manager

Project Support

Due to technology advancement, the largest gap is the lack of understanding design and construction. BIM today forces us to engage project production staff with a solid understanding of how a building is supposed to come together. This changes the roles, responsibilities and placement of such staff on your projects, as well as the mentoring approach from senior to junior staff.

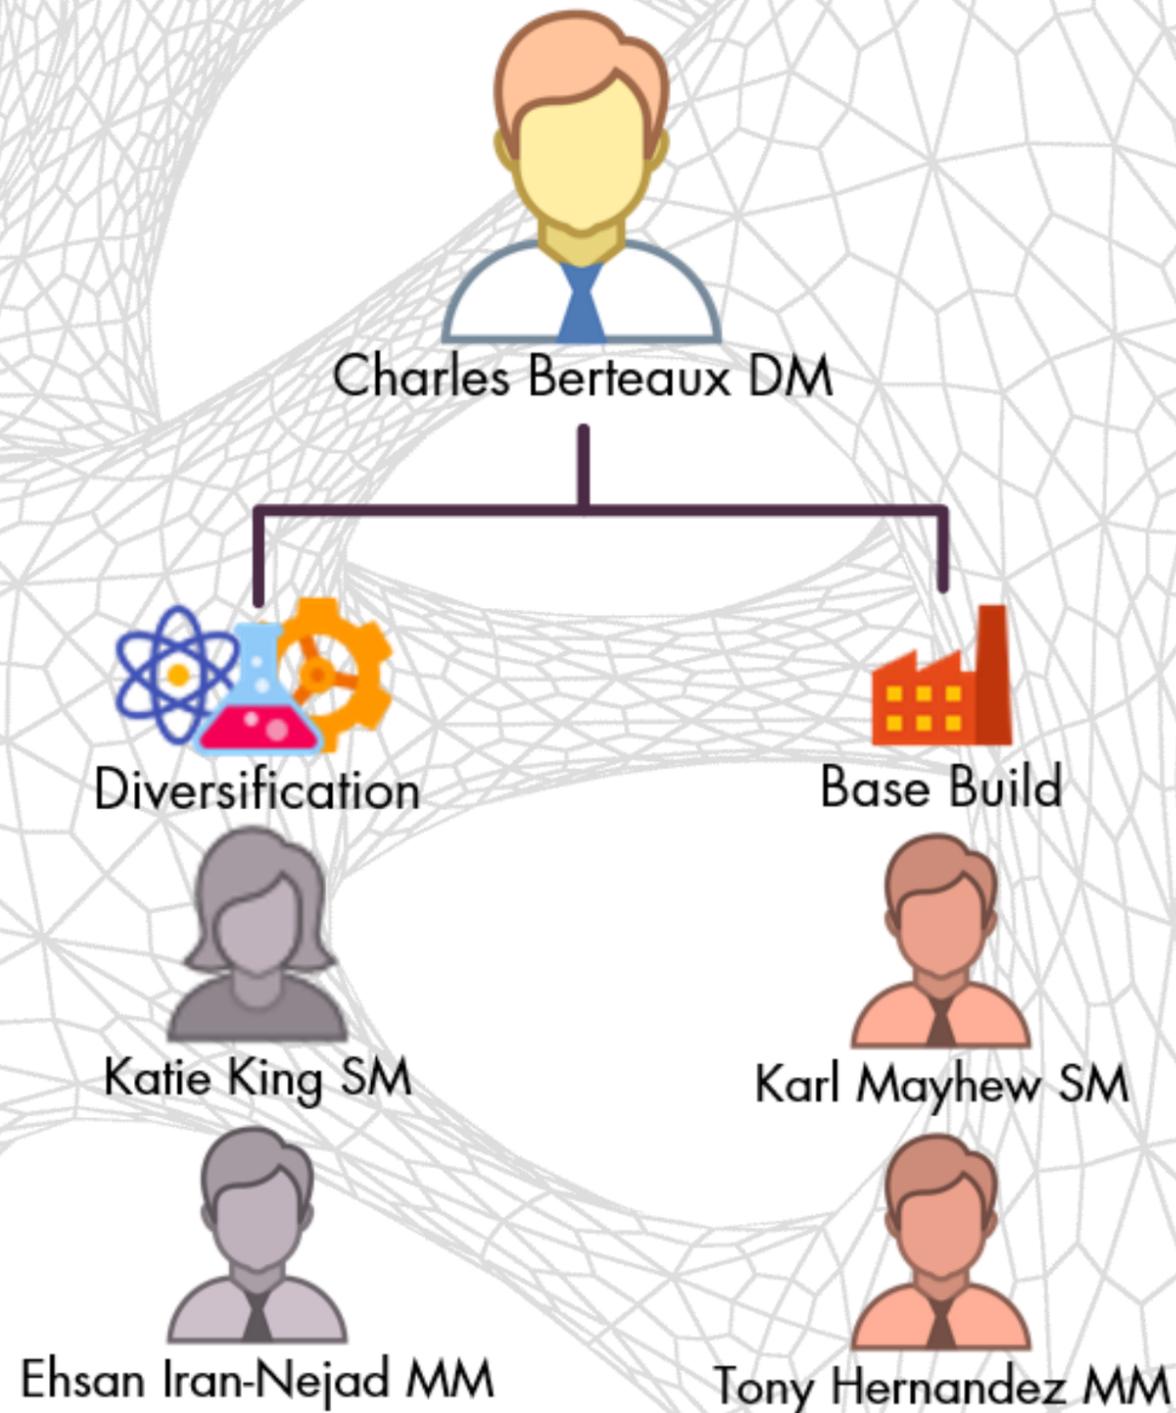

Design BIM Manager

Project
Support

	BIM Position	Key Tasks

ATSBU BIM/VDC DEPARTMENT

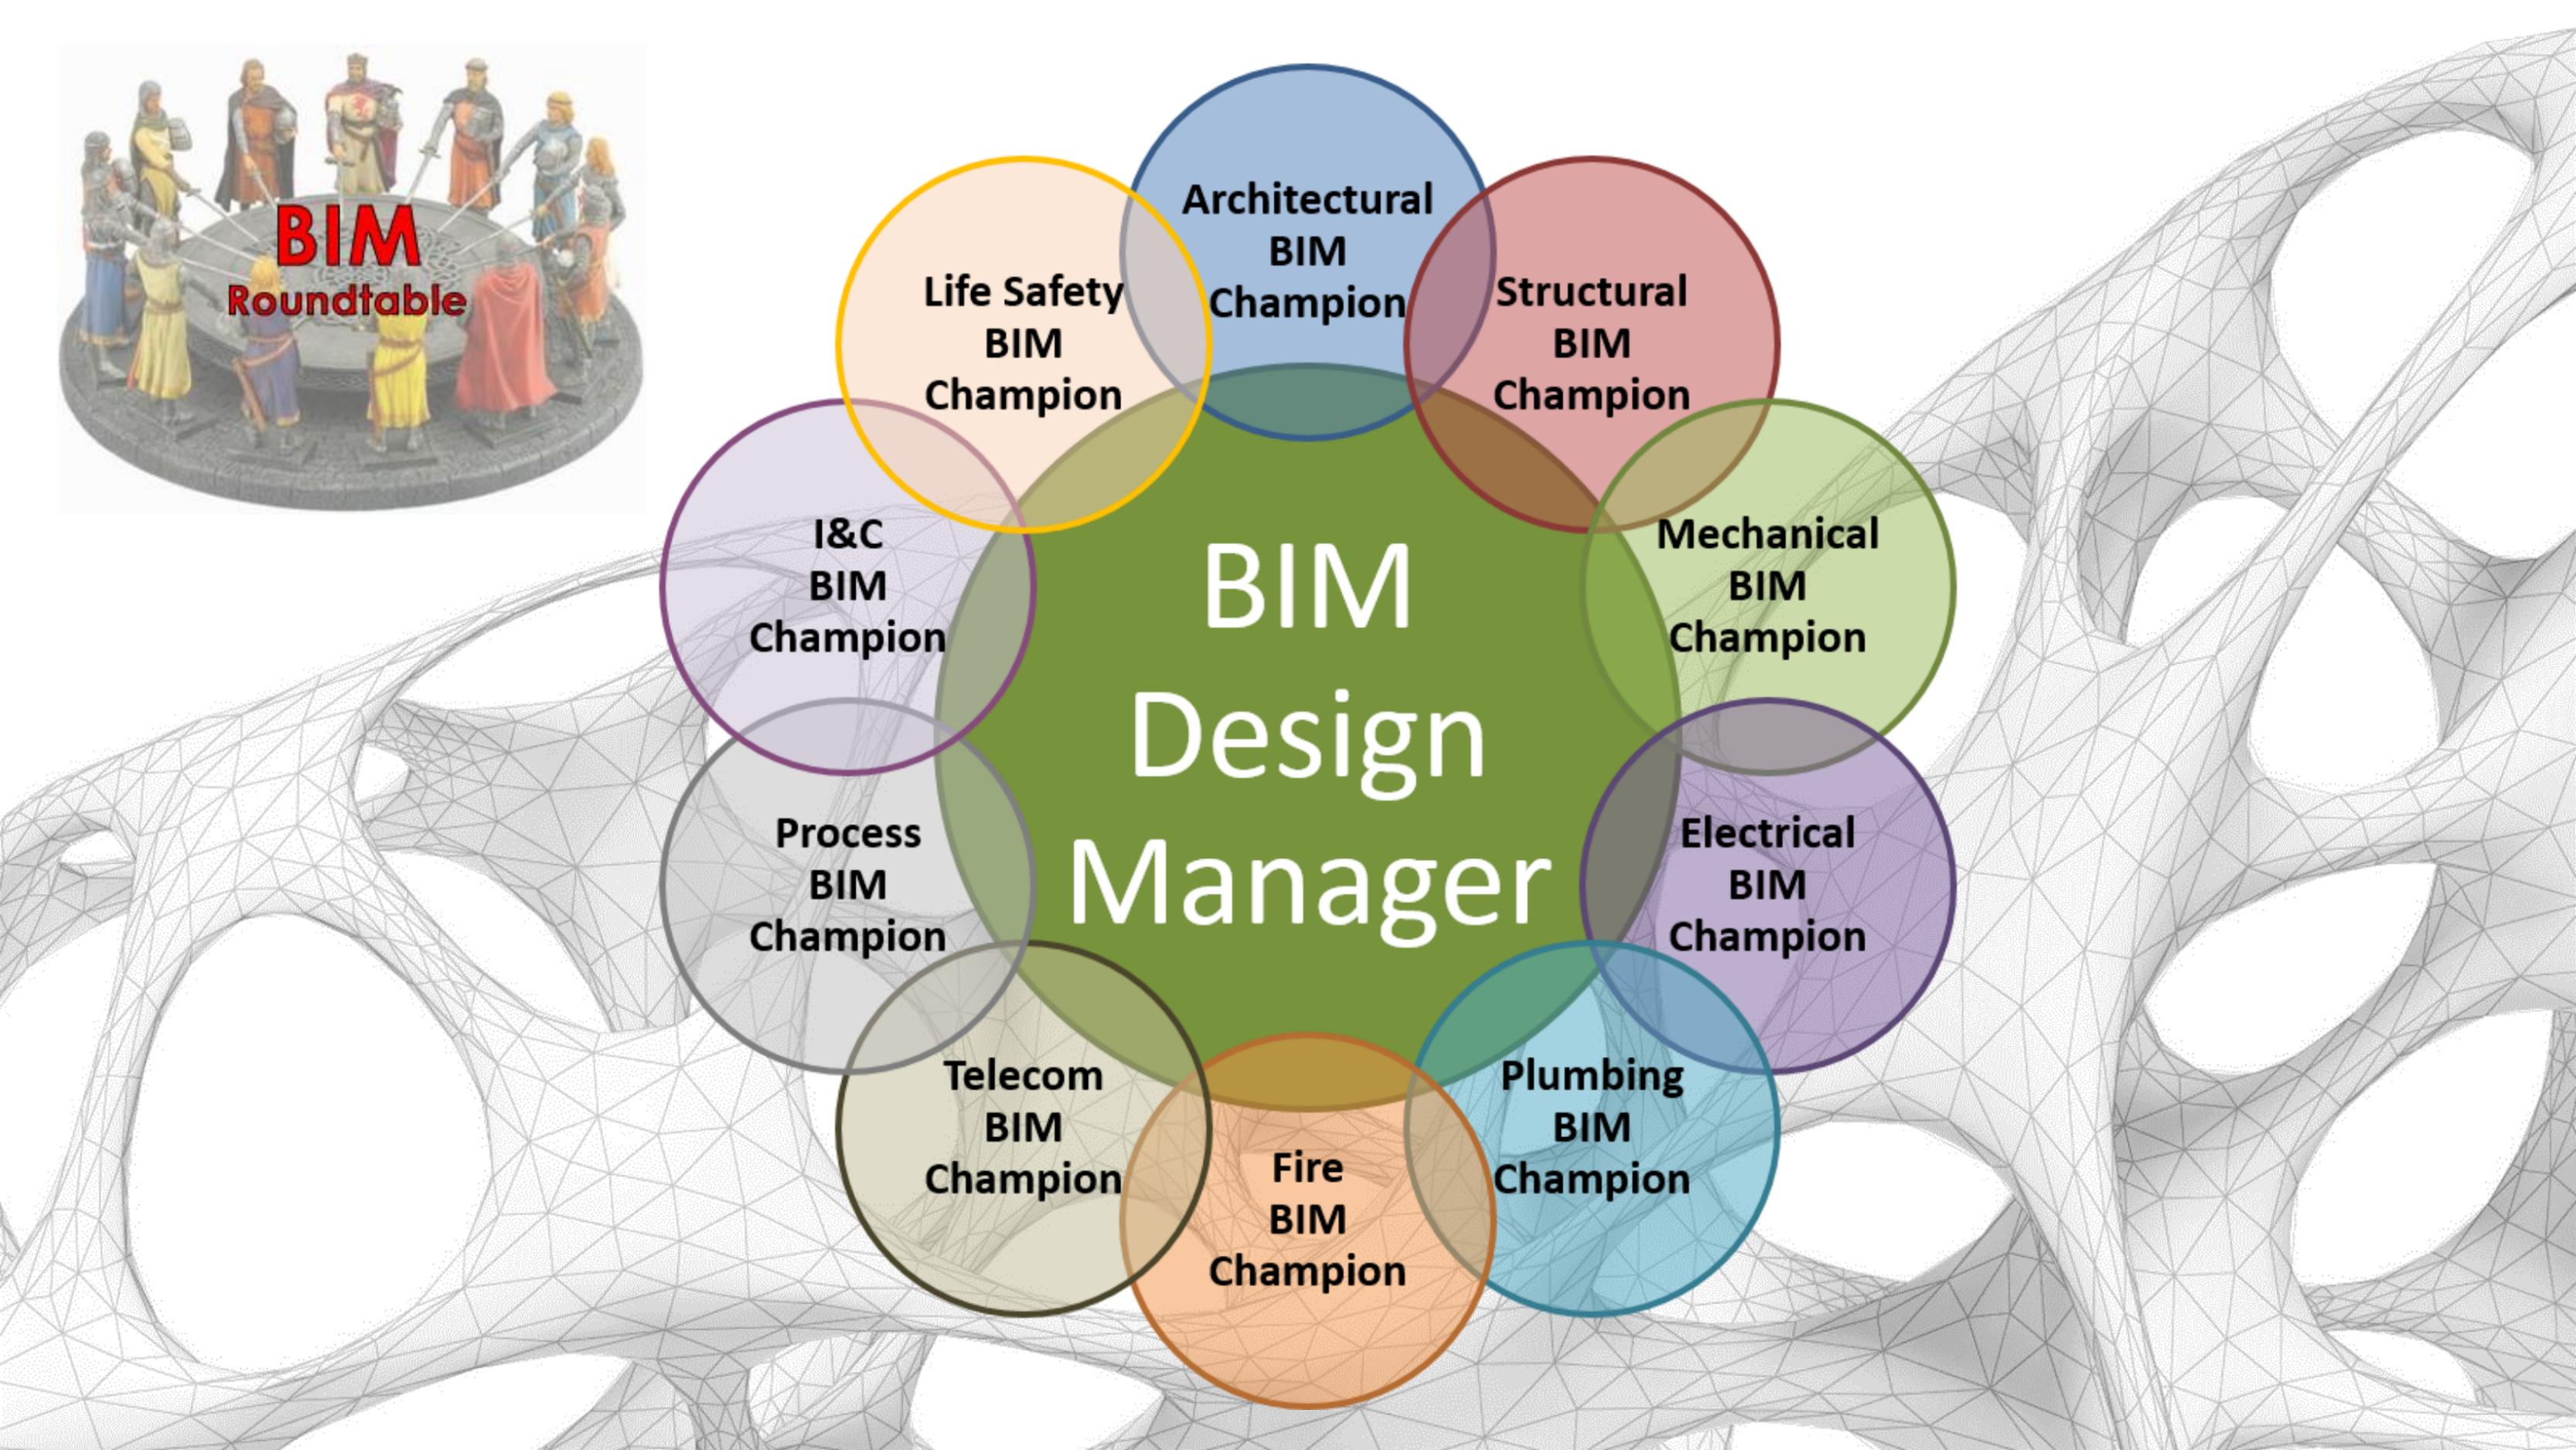

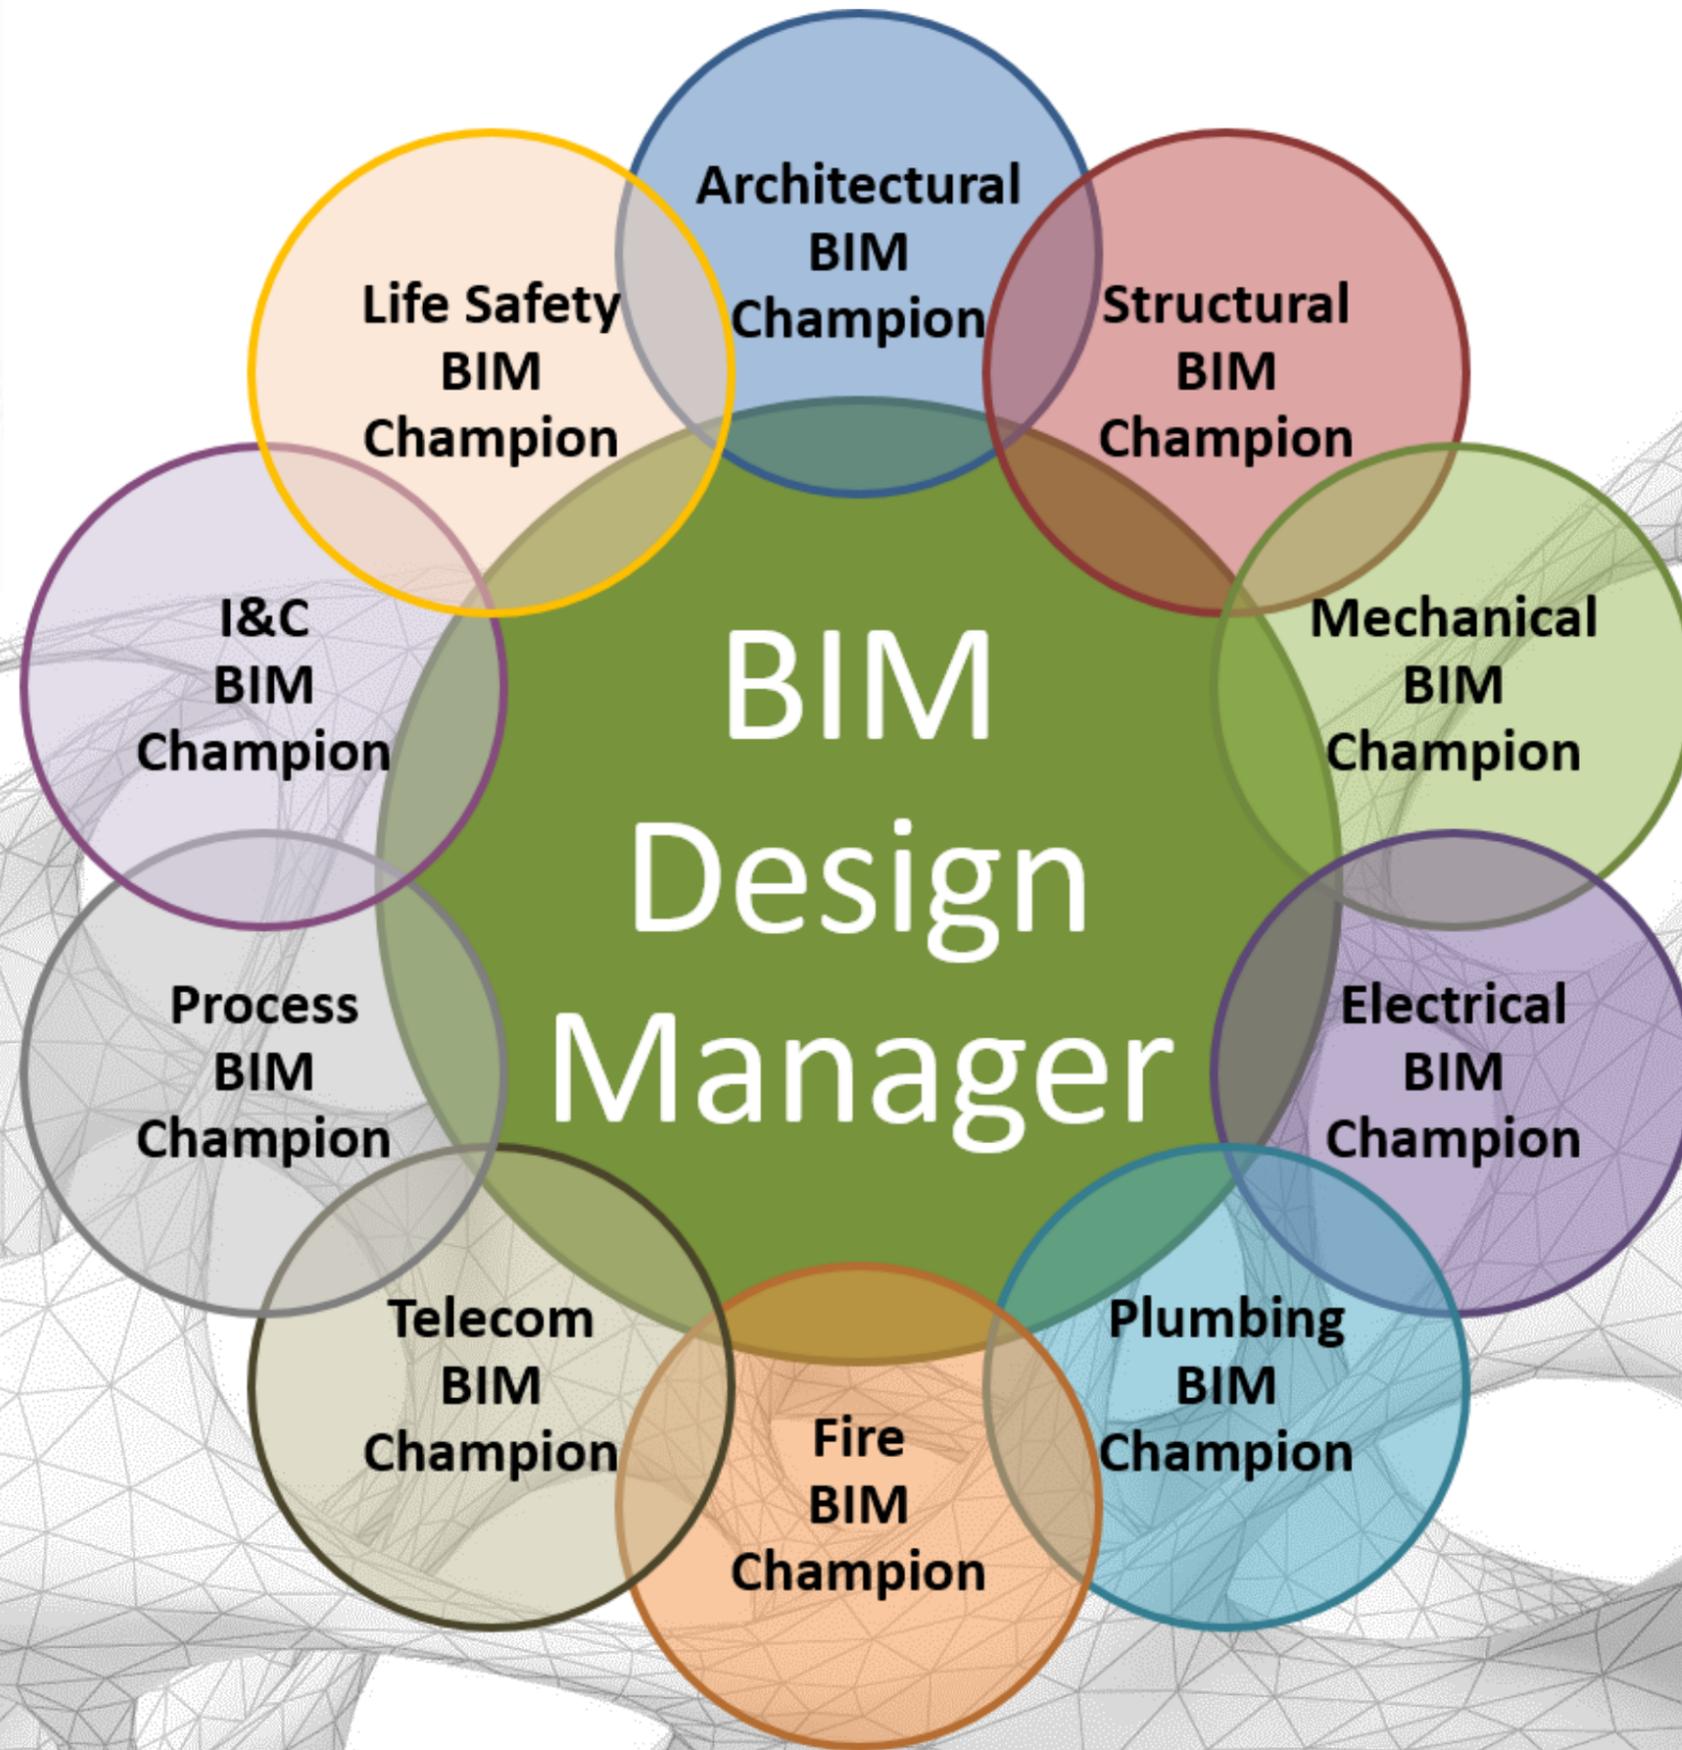

DUTIES AND RESPONSIBILITIES

- Leads, facilitates, and integrates the design and/or construction modeling efforts on projects in collaboration with the Project Director and/or Manager, project design coordinator, discipline design leads, and/or Construction Manager. Specific responsibilities include:
- Assist Department Mgmt. with assessing project team skills and development needs, and recommendations for training.
- Provide input to the project manager for project budget and develop the project technology team project work plan (DWP) in association thereto.
- Develop Project Execution Plans, including Model Authorship and LOD specifications.
- Prepare and lead the VDC/BIM Project Execution kick-off session.
- Assist the PM with requests for proposals and specifications for Reality Capture (3D laser scanning) & other outsourced BIM/VDC services.
- Create & review development of, and deploy project-specific model content.
- Facilitate the 3D spatial coordination process and resolution of (clash/interference) issues with the project Design Coordinator.
- Processing laser scan point cloud data for use in design and construction models.
- Perform specialized modeling application e.g. 4D simulations, point layout extractions, etc.
- Lead quality review process(s) for model content and methods within project models.
- Performance of regular maintenance processes on project models.
- Support the PM and QSR with project post-mortem sessions, capture and document improvements to modeling processes and Best Known Methods (BKM's).
- Provide support to the Project Manager, VDC/BIM Coordinator, Discipline BIM champions and discipline modelers throughout project.
- Participate in the firm's design technology community of practice (CoP) as part of the core group leadership.

Design BIM/VDC Manager

The image features a complex, abstract wireframe structure composed of numerous interconnected lines forming a mesh of irregular polygons. This structure is rendered in a light gray color against a white background. A solid blue horizontal bar spans the bottom portion of the image, containing the text 'BIM Manager' in white. The wireframe pattern is visible through the blue bar, creating a layered effect.

BIM Manager

BIM MANAGER

WE SOLVE PROBLEMS

YOU DIDNT KNOW YOU HAD

IN WAYS YOU DO NOT

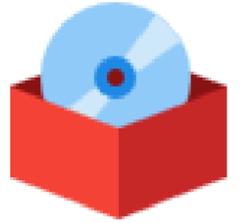

UNDERSTAND

The Roll of BIM Manager, what is that???

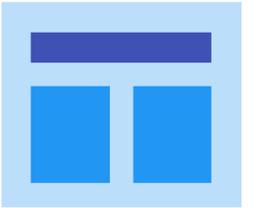

- This roll in the industry is still being invented and has not exactly been laid in stone and can mean different things to different people. One thing is for certain though, BIM management requires a diverse set of management skills and toolsets. We are often called upon to provide tips, tricks, technologies, tools, and strategies to better manage our company's BIM environment. We need to have the ability to tackle problem identification, problem solving, user motivation, senior management support, budgeting, training program justification, objection handling and more. Because of all of the nuances associated with our Title and Position it is sometimes hard to quantify exactly what we do.
- Basic Duties & Essential Job Functions any good BIM Manager

Software:

- **Manage software** products including but not limited to incorporating new version releases and customization of the product
- Manage the **implementation** of supporting software for BIM
- **Evaluate** new BIM related software and technologies
- Stay informed on **best practices** for use of Revit Architecture and BIM
- Stay informed on **other BIM related software** and how they work with Revit
- **Installation and support** of related BIM software

Standards:

- Responsible for BIM **standards development**, implementation, and enforcement
- Creation and maintenance of the software **Template files** to assure standards are being followed
- Provide support for **plotting** and electronic **file submissions**
- **Automate** routines in BIM to support standards and productivity
- Provide **quality control** for completeness and adherence to company standards of all shop drawings produced
- Assist in developing and enforcing **BIM documentation** and workflow process standards
- **Train** and oversee the day-to-day activities of the Revit Specialist to ensure BIM standards are maintained in the creation of the Architectural Revit model

Management:

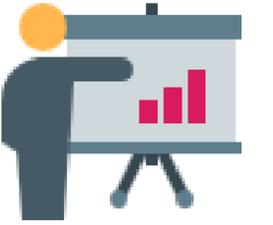

- Create written technology **evaluations** and budgets for future **technology adoption** that aligns with the corporate goals
- Chair the company's **BIM committee (BIM Roundtable)**
- Report on the company's current and **projected state** in regards to BIM implementation
- Create **Upgrade** and **Deployment** strategies for the BIM implementation effort
 - **Assess:** evaluate the firms current workflow, strategies, budgets, projects, staffing, etc.
 - **Plan:** create a plan for implementation. Who are the team members, what is the project, what are the goals, etc.
 - **Solve:** Execute the plan, install the software, get templates created, get training, do the pilot project, etc.
 - **Confirm:** Be able to demonstrate the company's BIM success by evaluating goals that were established in the Assess Phase

Support:

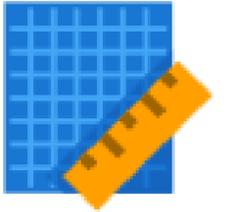

- Provide **hardware** and **network** support as it relates to BIM production
- Support the BIM technology needs of **satellite offices**
- **Troubleshoot** problems
- Liaison with **national vendors**
- Liaison with **corporate** technology support staff
- Liaison with **software developer** support staff and other support channels.
- Confirm: Be able to demonstrate the company's **BIM success** by evaluating goals that were established

Training:

- **Internal Training:** Provide Revit Architecture Fundamental and Intermediate training to all of your staff
- Conduct internal **continuing education** training sessions
- Provide technical orientation to **New Hires** regarding BIM tools
- **Test new hires skills in BIM**
- **Maintain** high level of **competency** of software through continued use and training
- Attend **conferences**, seminars, and workshops for BIM; **bringing back** learning and disseminating the information to appropriate teams

Project Interface:

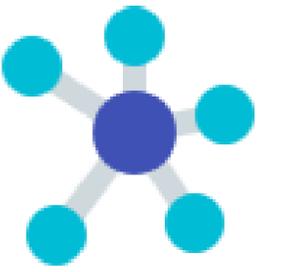

- Support project standards coordination with **customers**
- Assist on **project work** - modeling and detailing
- Assist project teams in BIM **project setup**
- Create **BIM Content** in response to project need
- Help resolve BIM **design issues**
- Manage and distribute **coordinated digital documents** to the project team
- **Coordinate** needed hardware **upgrades** with IT Communicate with subcontractors to receive, coordinate and update all electronic models
- Linking BIM to the project **Construction Administration** Phase for submittals, construction models, shop drawings and schedules

Marketing of BIM Services:

- Web, literature, interviews, presenting at relevant client focused conferences
- Future BIM/Revit **Industry Initiatives** and Developments
- **Identify trends** and business opportunities relating to BIM Evaluate and make recommendations regarding BIM software.
- Develop a **Blog** or other form of social media

Involvement with Industry Organizations:

- AIA Technology in Architectural Practice (TAP) Knowledge Community
- AIA Integrated Practice Knowledge Community Industry Events: AIA National Convention
- PE / MEP
- Autodesk University
- AUGI
- Local User Groups
- Local colleges and universities for future resources

Required Qualifications:

- 5+ year's production experience in design, drafting or engineering
- Associates Degree or Higher in the above
- Must have an in-depth working knowledge of current BIM versions with emphasis on project setup
- Strong written and verbal communication skills
- Must have a professional appearance
- Ability to use time productively, maximize efficiency, and meet challenging work goals
- Ability to take on additional responsibilities as needed as well as determining and manage priorities with minimal guidance
- Must possess and maintain exceptional work ethic as well as uphold company values and demand the highest standard of conduct from self and others
- Must have basic PC experience in Windows environments, working knowledge of word processing, spreadsheets, e-mail, Web-enabled applications, and database software
- Must be a self-starter and possess the drive to pursue continued education on BIM
- Must possess the ability to work well as part of a team and independently

Integration with Management and Non-BIM

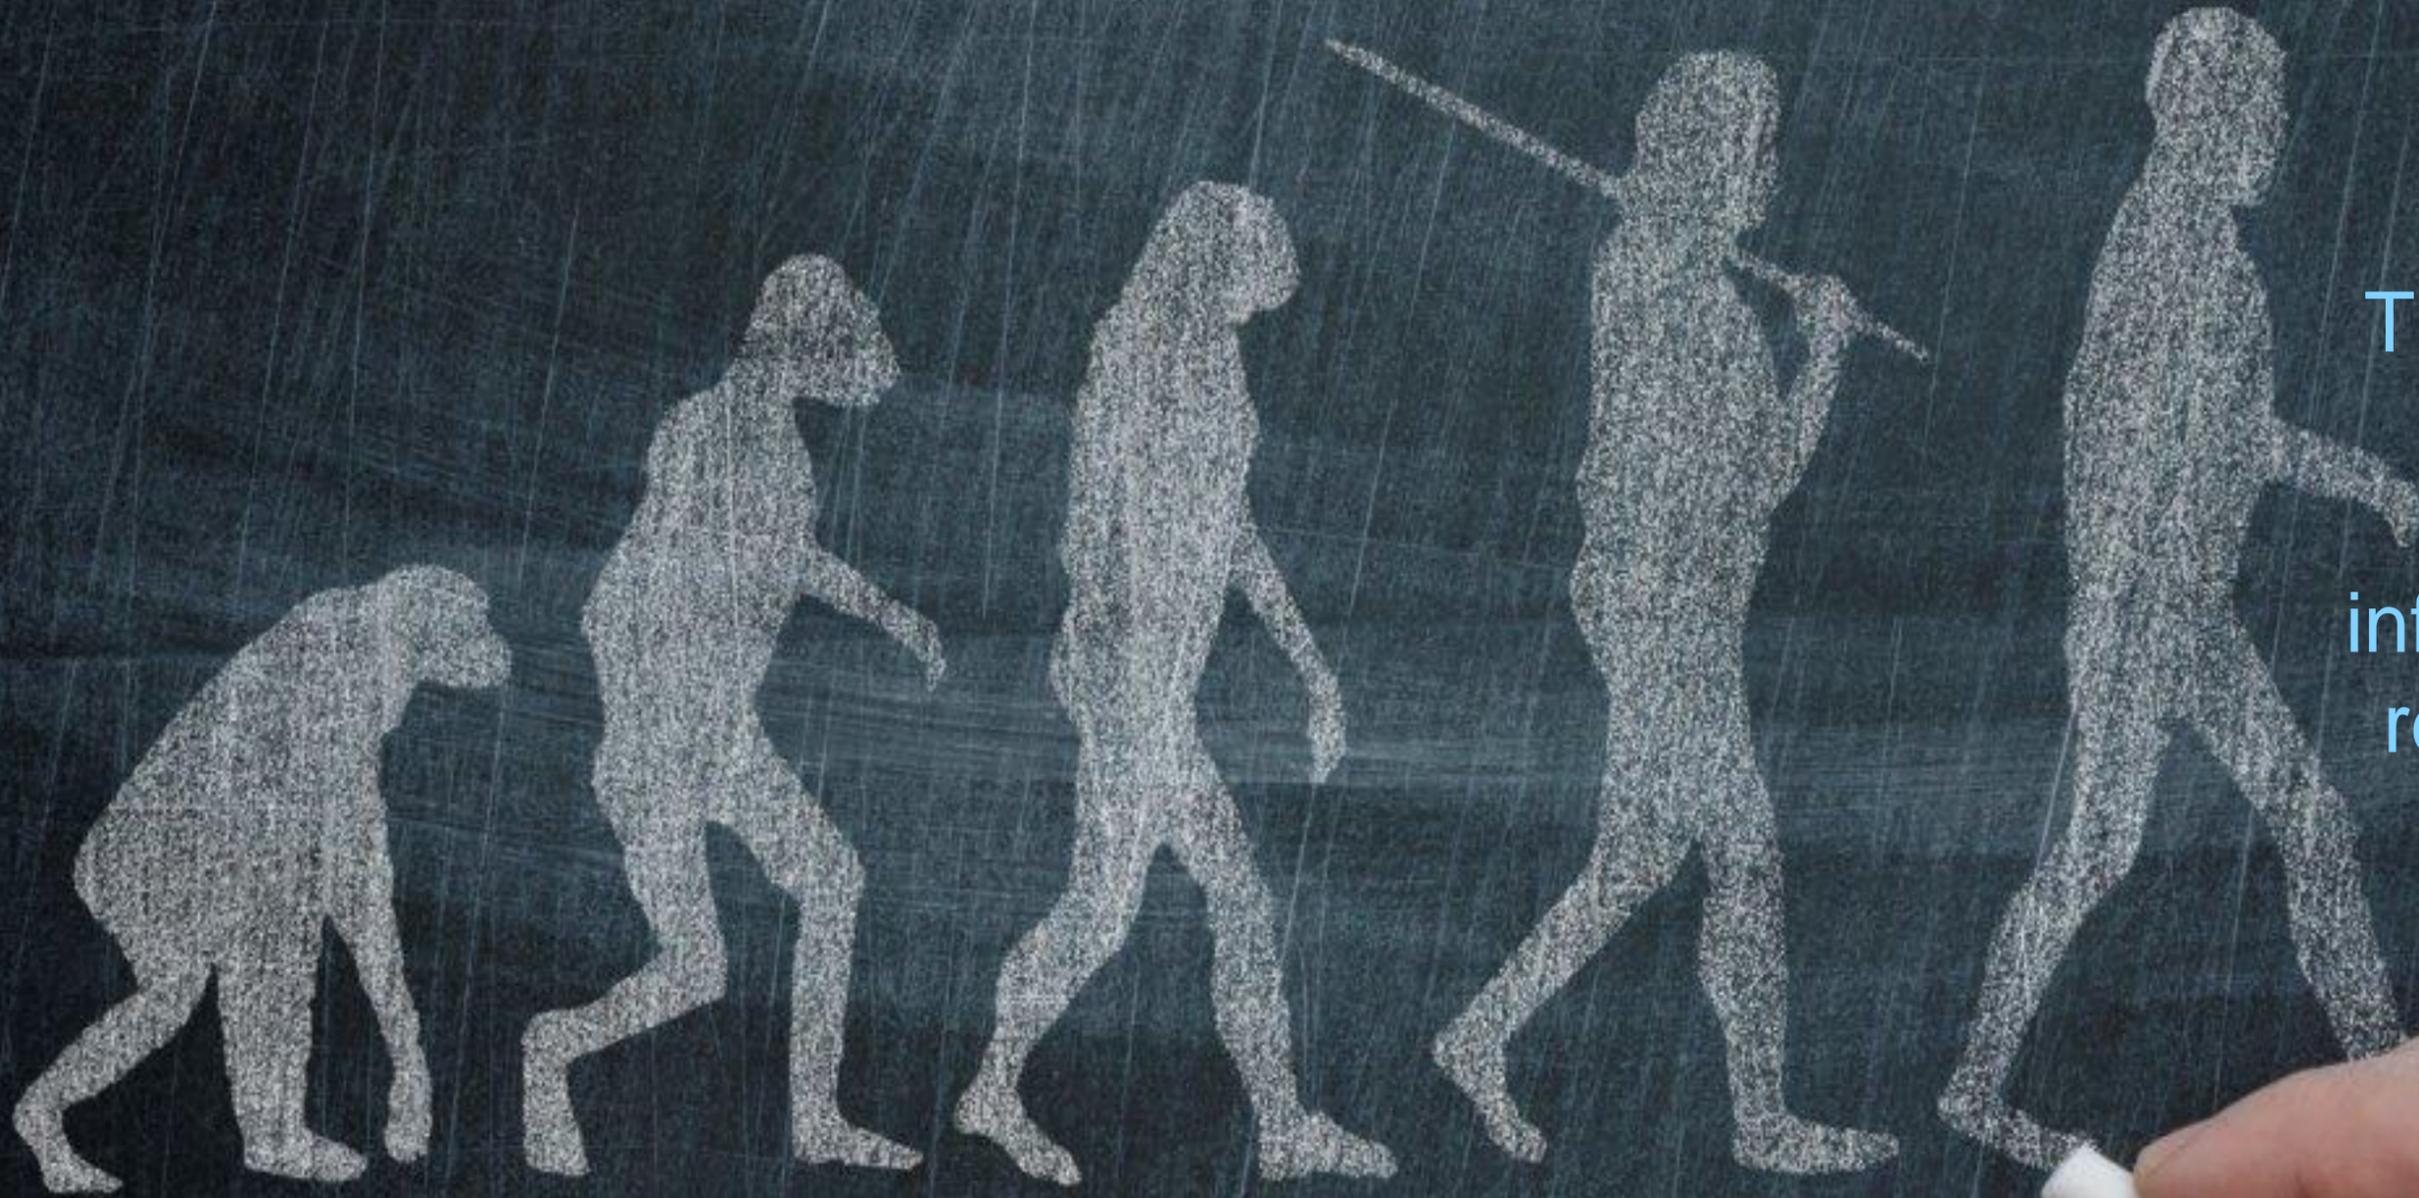

A blurred, blue-tinted photograph of several business professionals in suits walking through a city street. The image is semi-transparent, allowing the text to be overlaid. The background shows a cityscape with various buildings and a bright sky.

**MANAGEMENT
&
NON-BIM**

Social Science describes **organizational culture** as:

“The constellation of values, beliefs, assumptions, and expectations that underlie and organize the organization’s behavior as a group.”

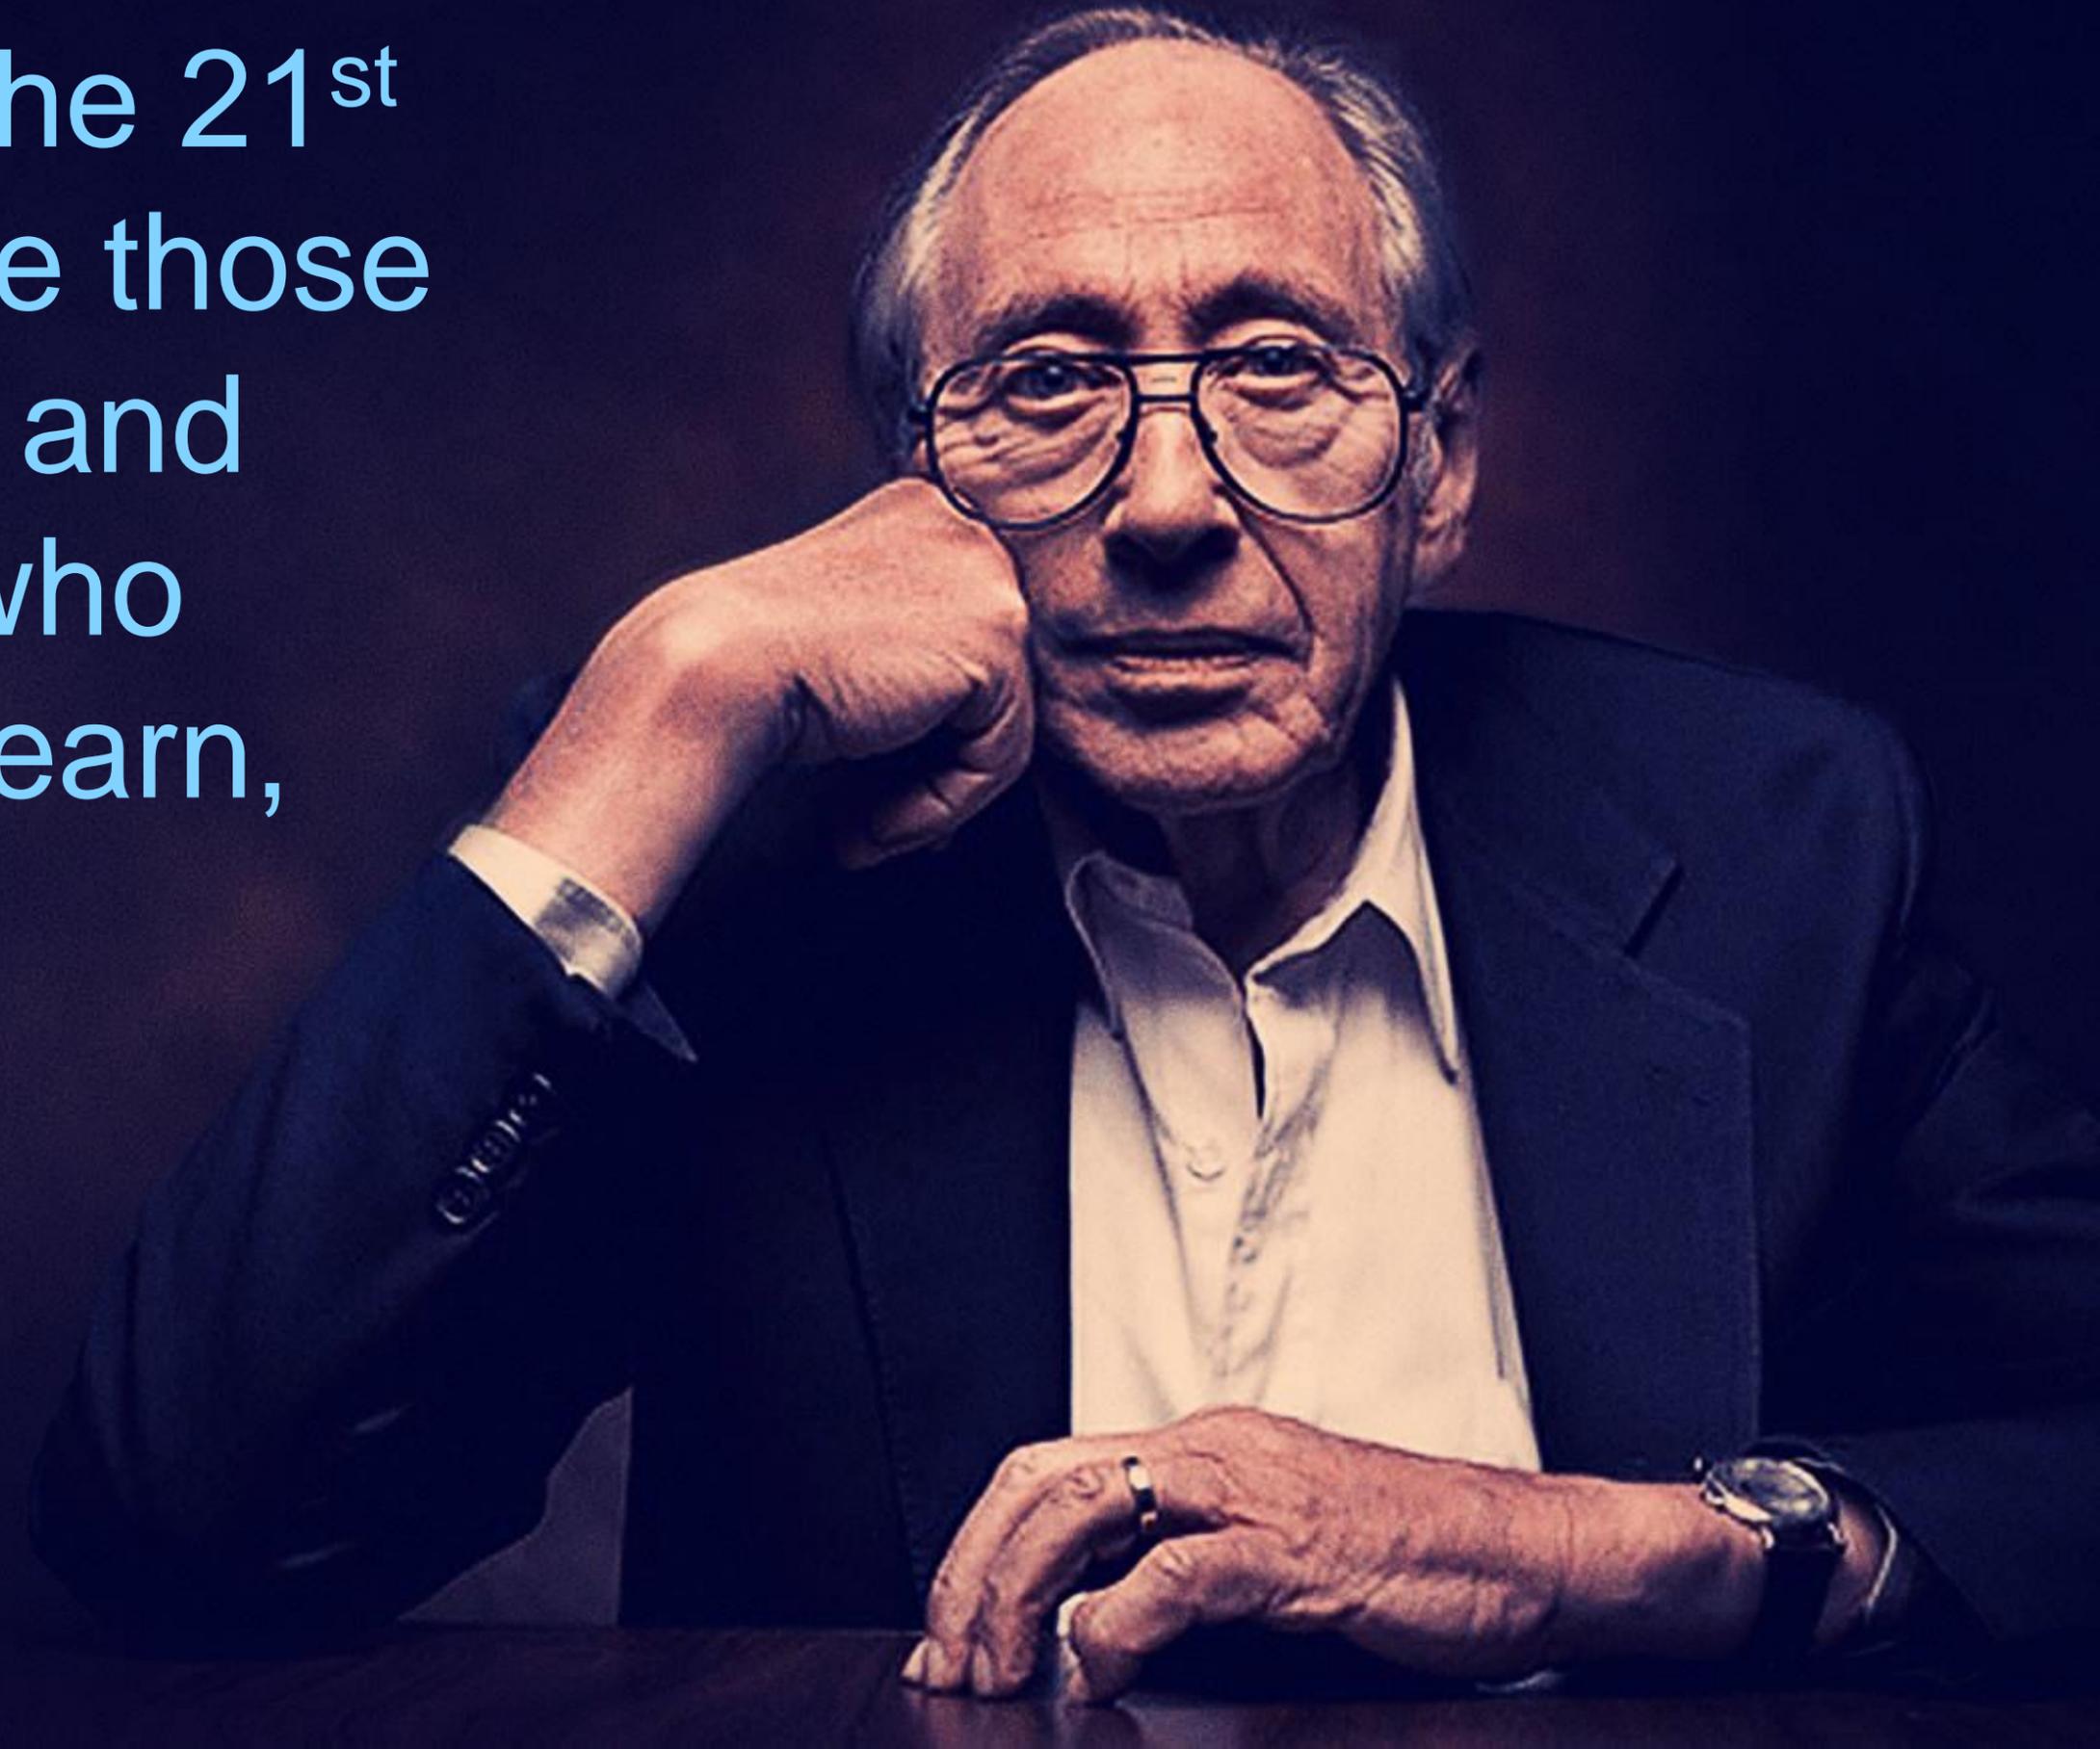

“An organization doesn’t change until the individuals within it change.”

The introduction of high-end technology for information sharing requires a re-think of established workflows.

“The illiterate of the 21st century will not be those who cannot read and write, but those who cannot learn, unlearn, and relearn”

Alvin Toffler

Step 1 Clear definition of the objective and understanding of current situation

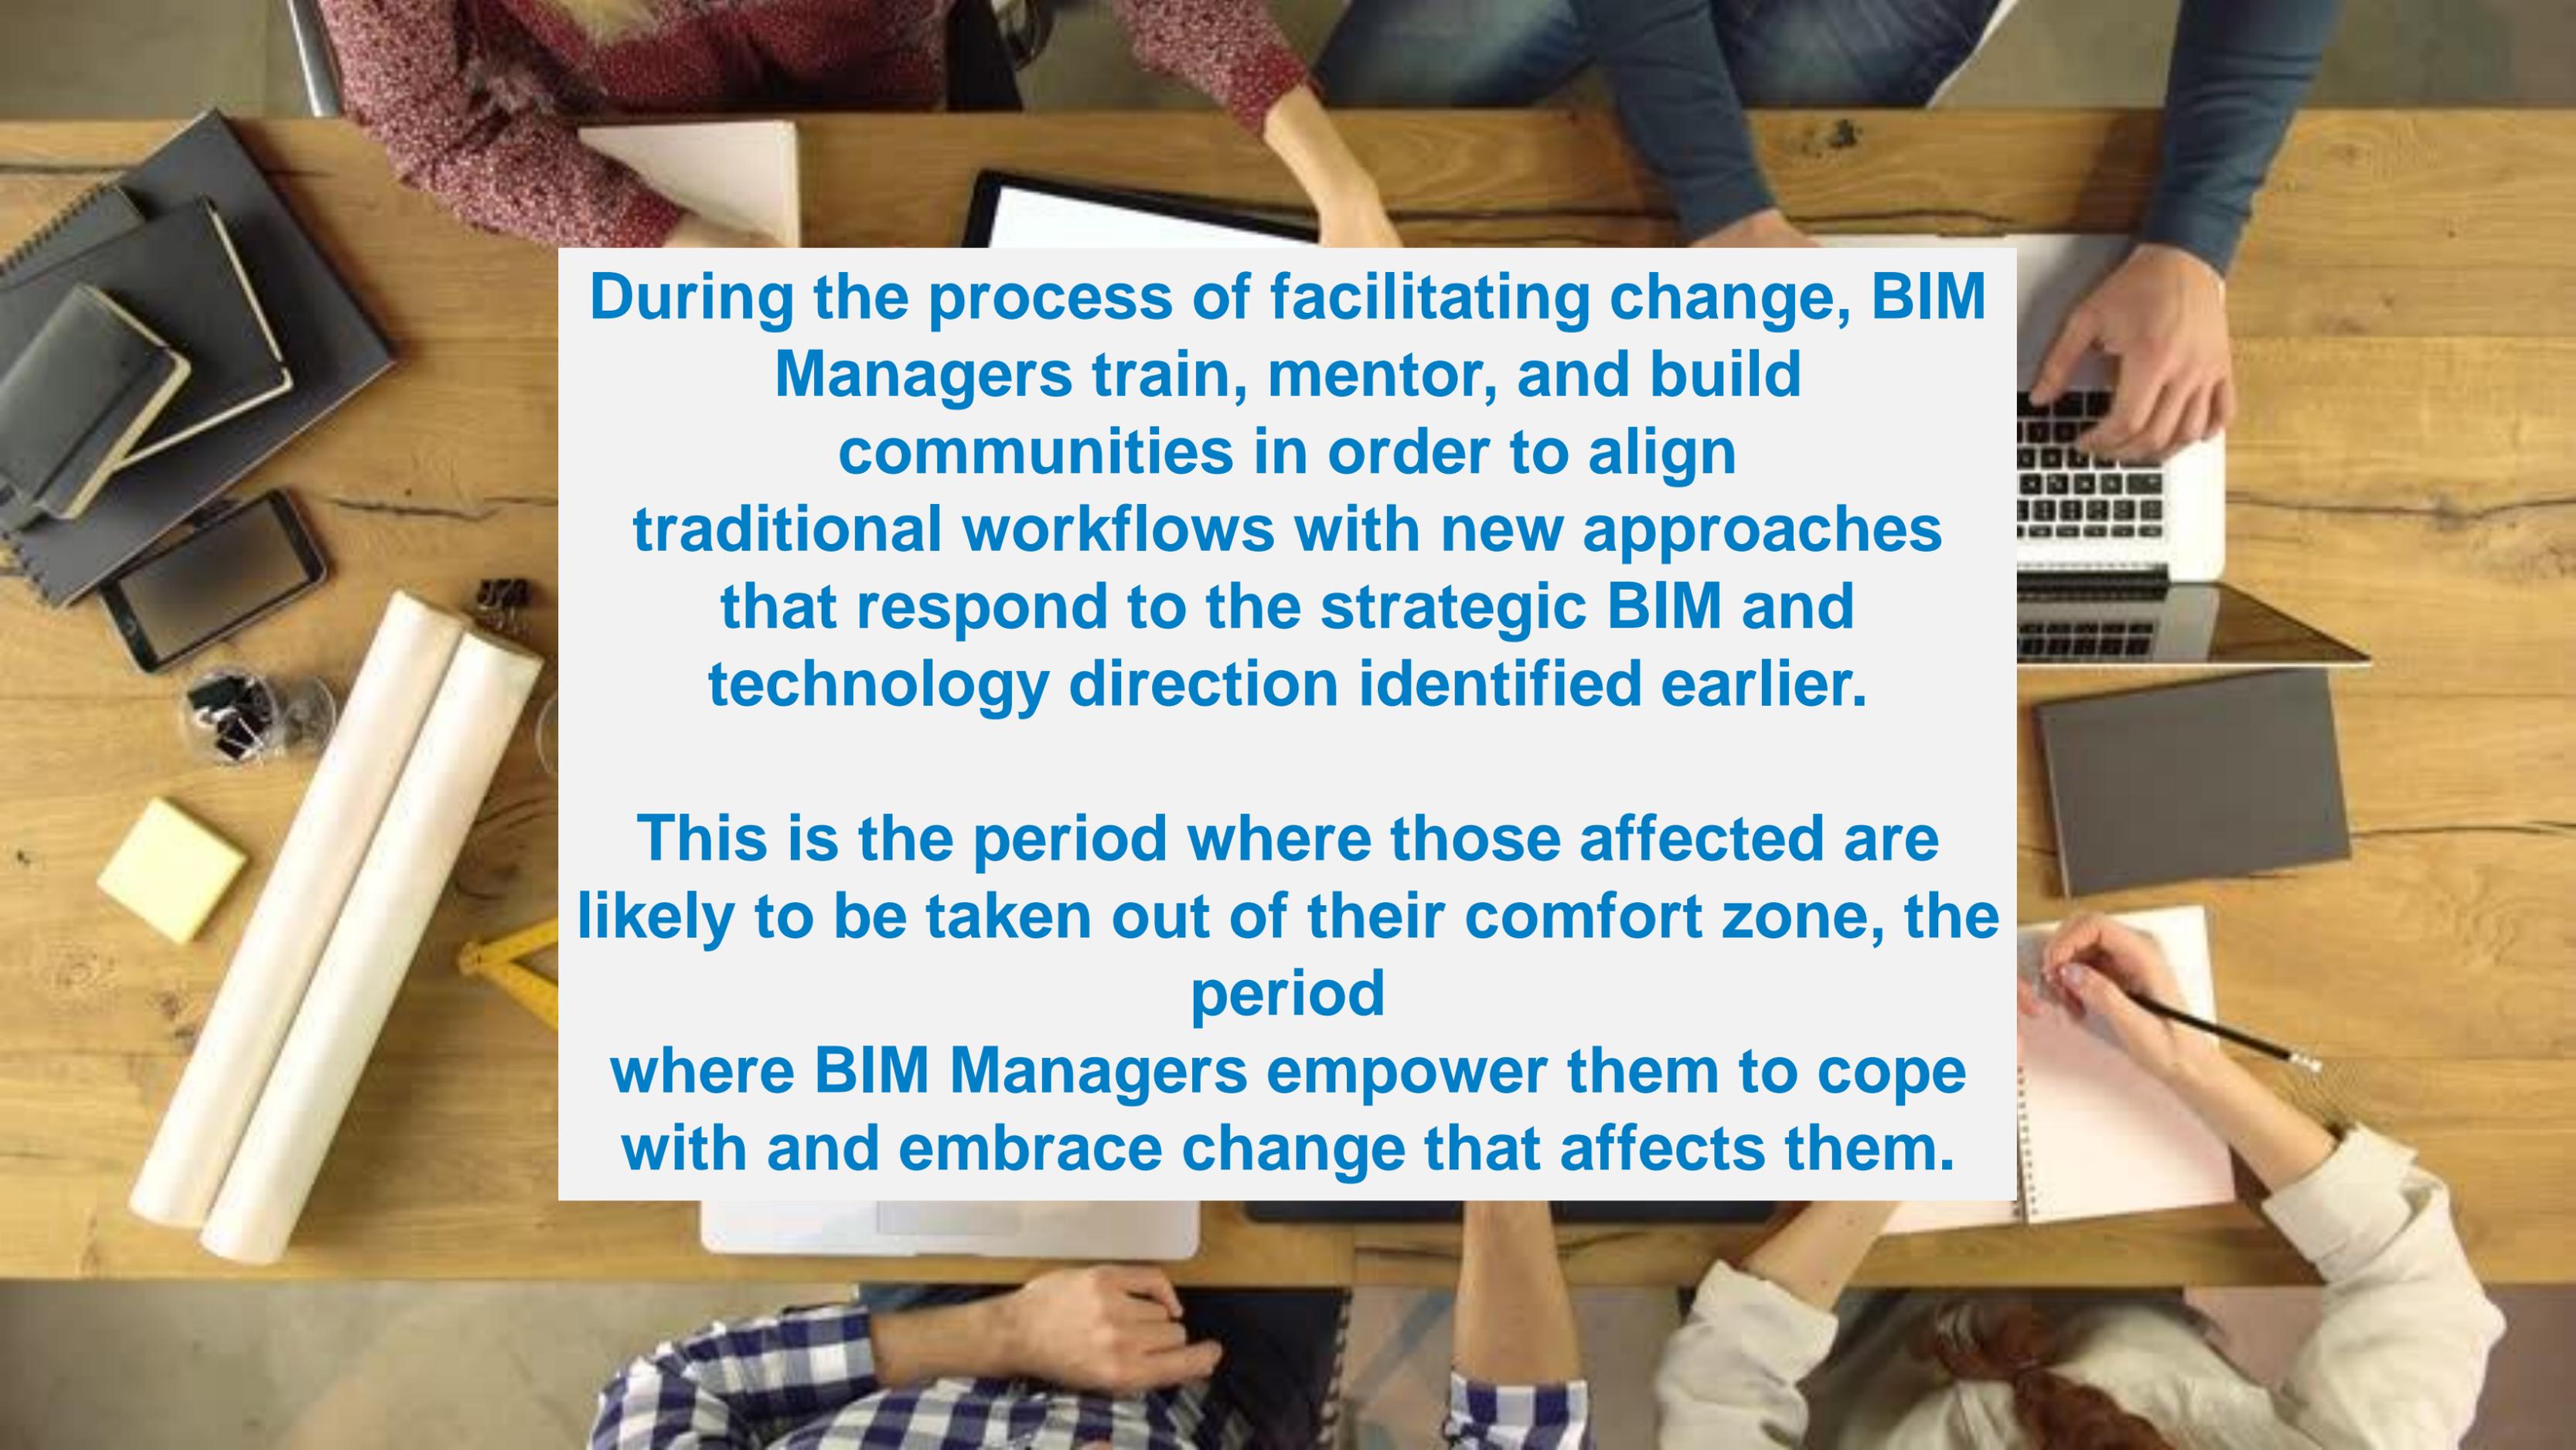

Step 2 Get employees involved in executing the change

Step 3 Consolidation of the change with constant feedback

Any organizational change is only as effective as the means to uphold and sustain its effects.

What needs to happen to empower those who are well set in their traditional ways to open up toward new approaches?
How can one structure a process of engagement that leads to sustained organizational change?

An overhead view of a meeting table with several people sitting around it. There are laptops, notebooks, and documents on the table. The text is overlaid on a white rectangular background in the center of the image.

During the process of facilitating change, BIM Managers train, mentor, and build communities in order to align traditional workflows with new approaches that respond to the strategic BIM and technology direction identified earlier.

This is the period where those affected are likely to be taken out of their comfort zone, the period where BIM Managers empower them to cope with and embrace change that affects them.

There appears to be a disconnect between those who manage and lead an organization and those who actively engage with BIM. The kind of change required, and the extent to which change is needed to facilitate BIM, is often unknown to upper management.

It is the BIM Manager's role to bridge this gap.

Your Clients

What is BIM?

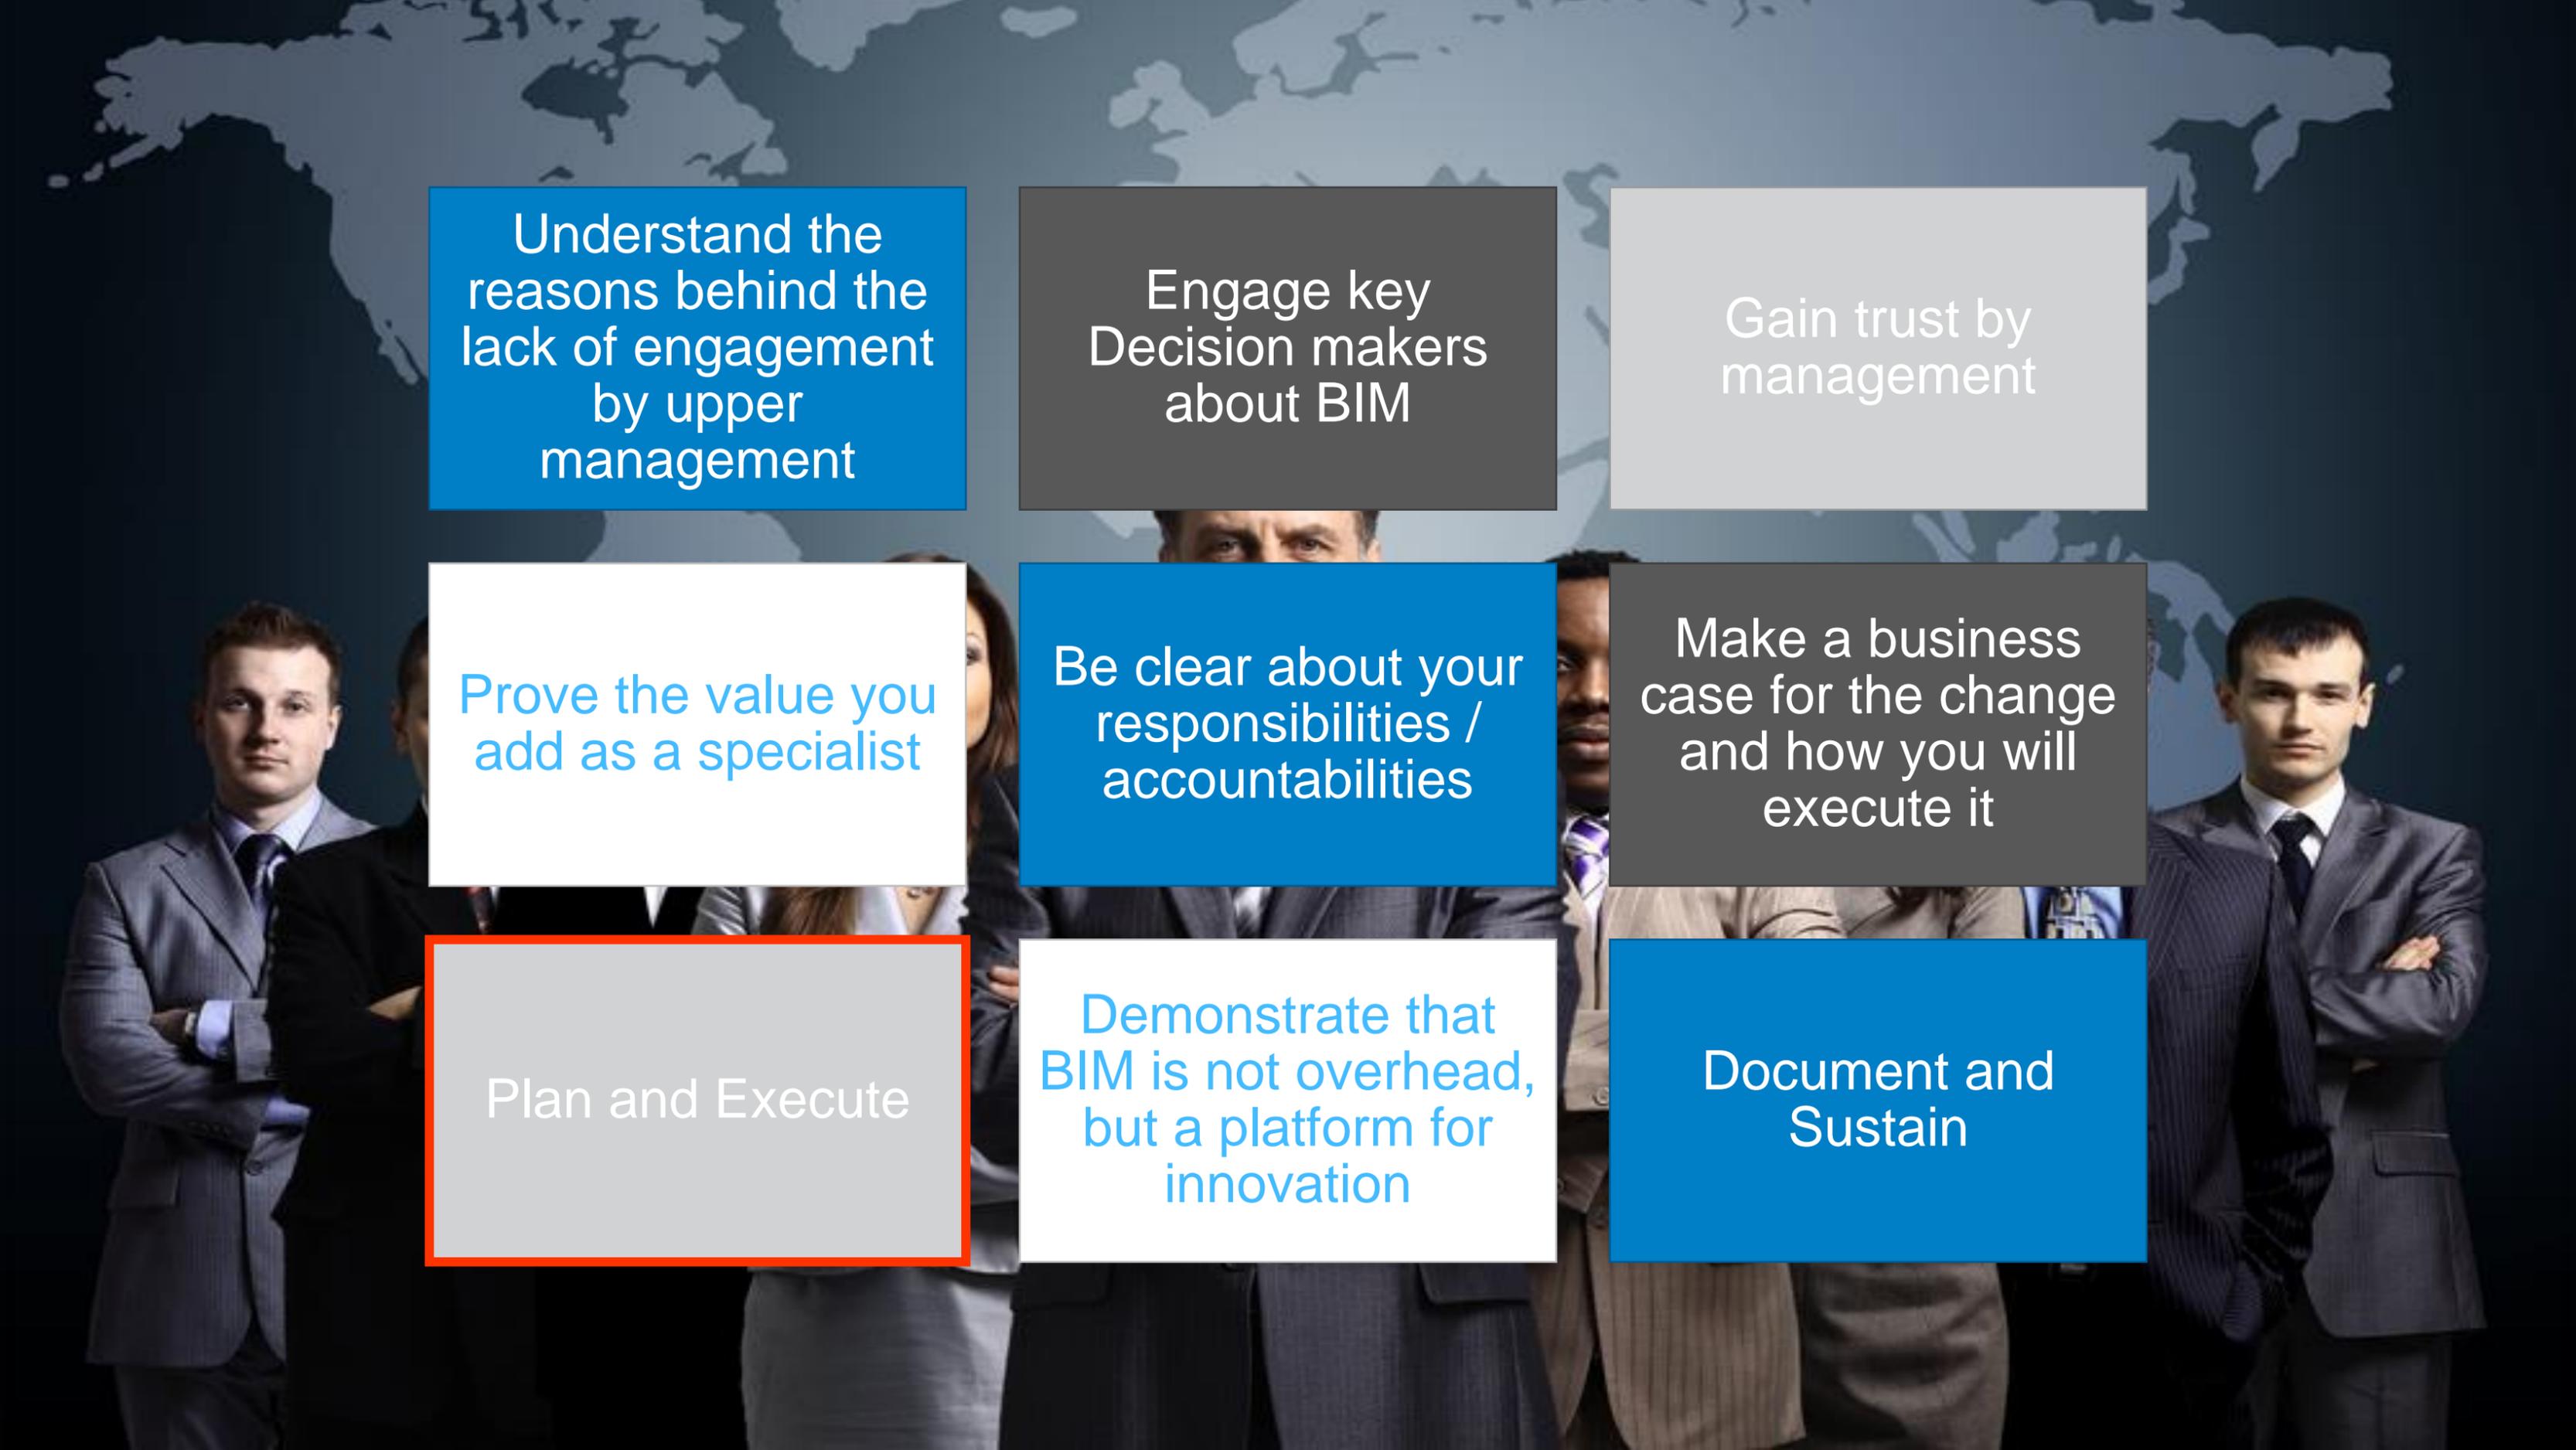

Wo Said BIM?

We Want BIM!

“BIM is a supply-side phenomenon, offering changed performance to the market as ‘Push.’ What will determine how it changes the industry will be the customer ‘Pull,’ the services actually sought by the market.”

– Richard Saxon

Understand the reasons behind the lack of engagement by upper management

Engage key Decision makers about BIM

Gain trust by management

Prove the value you add as a specialist

Be clear about your responsibilities / accountabilities

Make a business case for the change and how you will execute it

Plan and Execute

Demonstrate that BIM is not overhead, but a platform for innovation

Document and Sustain

The background of the slide is a complex, abstract wireframe structure. It consists of a dense network of thin, grey lines that form a mesh of irregular polygons. This mesh is warped and curved, creating a sense of depth and movement, similar to a 3D wireframe model of a complex object or a topographical map. The lines are most concentrated in the center and become sparser towards the edges. A solid, dark grey horizontal bar spans the width of the slide, positioned in the lower third of the frame. The text 'Standards and Templates' is written in a clean, white, sans-serif font, centered within this bar.

R | REVIT TEMPLATE

First: What is a Template??

Templates are defined as 'a standardized non-executable file type used by computer software as a pre-formatted example on which to base other files, especially documents'. Templates contain a set of repeated elements and are created to standardize visibility setting across the final documents.

Second: Why are Templates necessary??

Using a template to work from and to layout elements, allows for less time with background work and more time on individual projects. Templates also provide a level of consistency across all projects, this is essential from a managing perspective.

WHAT DO I PUT INSIDE??

3rd - Min. Template Requirements:

- Project Units (Metric/Imperial)
- Levels and Spacing
- Defined Views (On-Going)
- View Properties
- View Display
- Detail Level by Scale
- View Templates
- Object Styles (On-Going)
- Fill Patterns
- Material Definitions
- Line Styles
- Line Weights
- Line Patterns
- Title Blocks
- Grid Styles
- Wall Styles
- Floor Styles
- Roof Styles
- Door Styles
- Window Styles
- Stair Styles
- Railing Styles
- Section Styles
- Elevation Styles
- Callout Styles
- Default Families Loaded (Family Manager Add-In?)
- Default Loaded Tags
- Default Symbols Loaded
- Temporary Dimension Defaults
- Permanent Dimension Styles
- Text Styles
- Snap Settings
- Room and Area Settings
- Browser Organization
- Phases
- Keynoting (Spec Software integrated?)
- Project Parameters (On-Going)
- Site Settings
- Structural Settings
- Filters
- Spelling Library
- Color Schemes
- Export Layers Defined
- Import Line weights
- SHX font mapping
- Use OpenGL Hardware Graphics
- Sun and Shadow Settings
- Revit .ini customization
- Keyboard Shortcuts
- Code Requirements
- Cover Sheet Requirements

I'm a strong believer in BIM standards, that's why I use an excellent set of my own

4th – What not to put in your templates

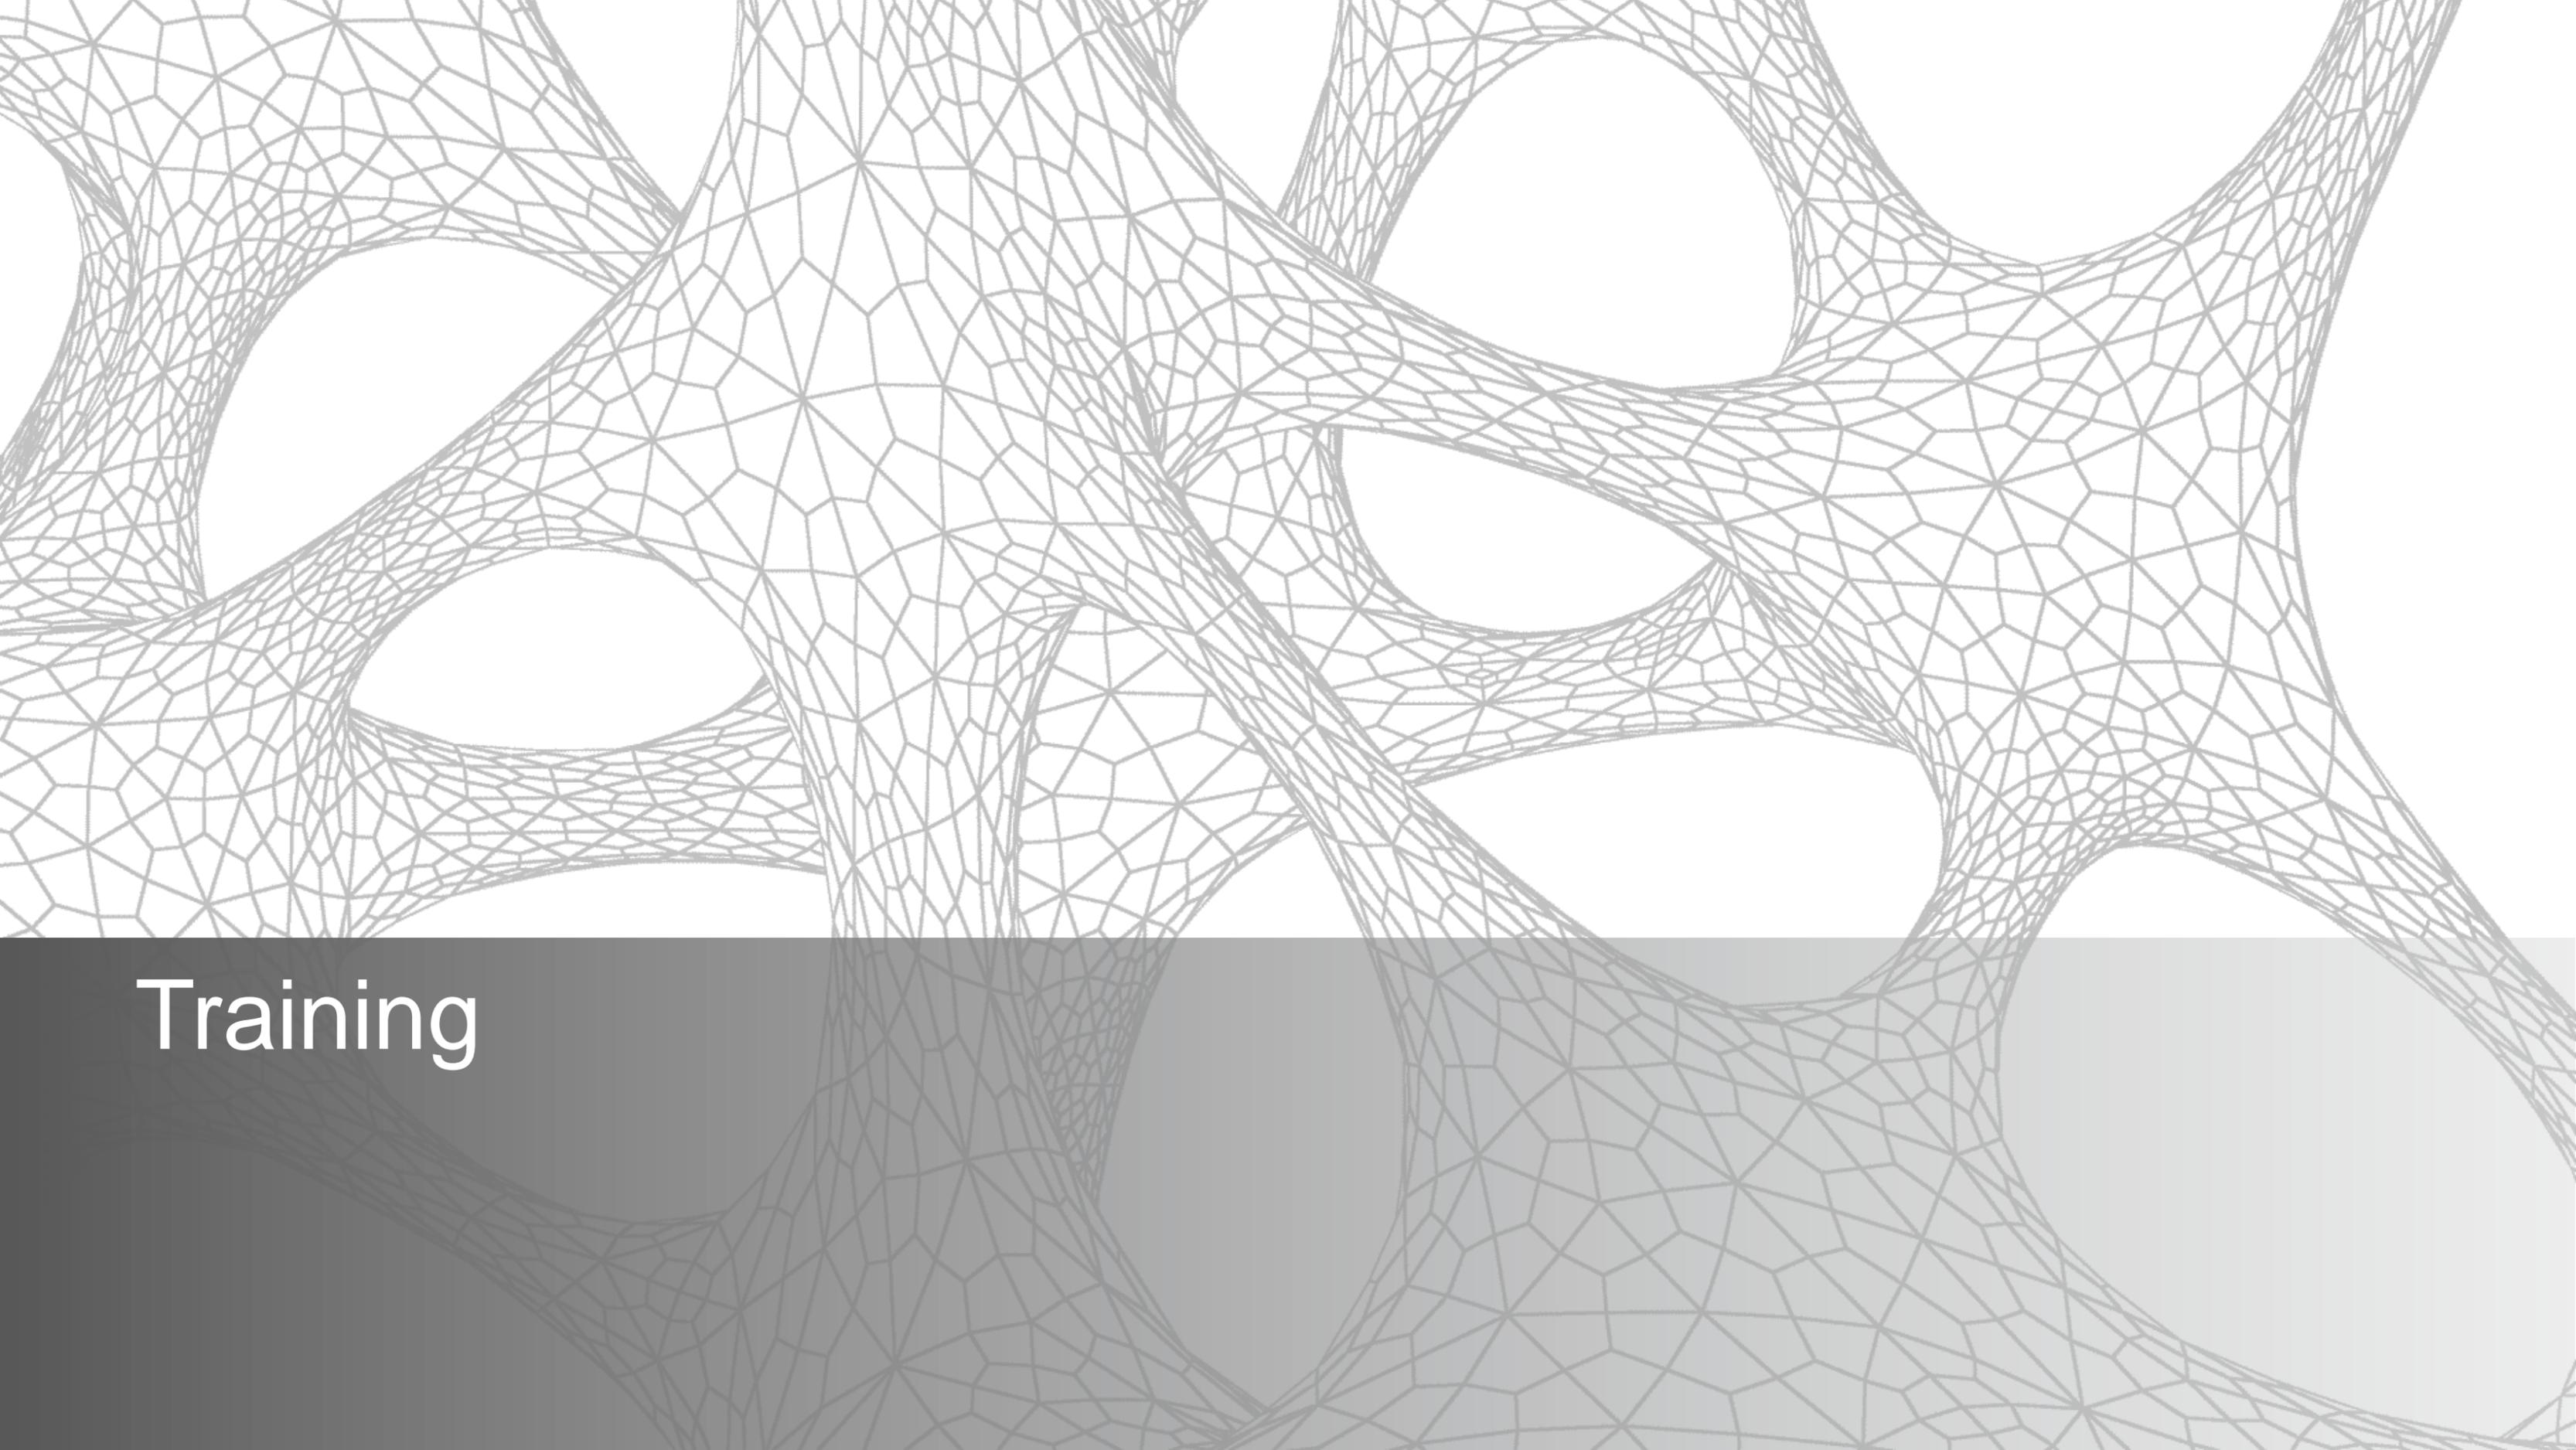

Do not make your project templates heavy, i.e. you do not include everything that a project **MAY** use. This is why we have a Standard Content folder with a structure for the user to find the content to be load easily. So items may be loaded in using Load Family and System Families can be loaded either via Copy/Paste or Transfer Project Standards.

Details:

Adding details that a project may use will unnecessarily weigh the template down. Some details are appropriate to add, like standard mounting heights, abbreviations, patterns etc. In our office we have the sheet setup for out Discipline Standards which get put in for every project. Those details are appropriate to add to the project template.

Worksets:

Worksets cannot be expressed enough – these are not layers like in the CAD days. Use only as many as you need to break up modeling efforts. The more you have, the slower your model will behave.....**Naughty Naughty** – Make sure your naming standards are captured in your companies production model.

pyRevit

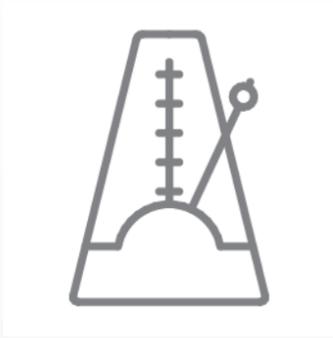

Ehsan Iran-Nejad

pyRevit is an IronPython script library for Revit. However, it is not really written as an example library. It is a working set of tools fully written in IronPython that explores the power of scripting for Revit and also adds some cool functionality. Download and install it, launch Revit and you will note the new **pyRevit** tab that hosts buttons to launch all the scripts provided by the package to easily run them without the need to load them in RevitPythonShell or some similar IronPython console. You can also write your own scripts and add them to pyRevit. There is even a Reload button that dynamically adds the new scripts to the current Revit session without the need to restart Revit.

8 Steps to Successfully Marketing BIM

STEP 1.

Recognize the business and marketing aspects of implementing BIM in your organization.

- Your organizational culture will look at BIM as a tool instead of as a business opportunity offering services beyond what AEC firms have traditionally offered.
- Your firm will suffer from a lack of BIM definition, capability, and expertise.
- Your client-facing staff will not understand your overall vision and goals for BIM.
- Your business development and marketing staff will rely on legacy capabilities instead of using new skills and capabilities that BIM makes available to your firm.

STEP 2.

Establish a BIM vision that is linked tightly to your firm's philosophy and goals and is fully enmeshed within the fabric of your organization.

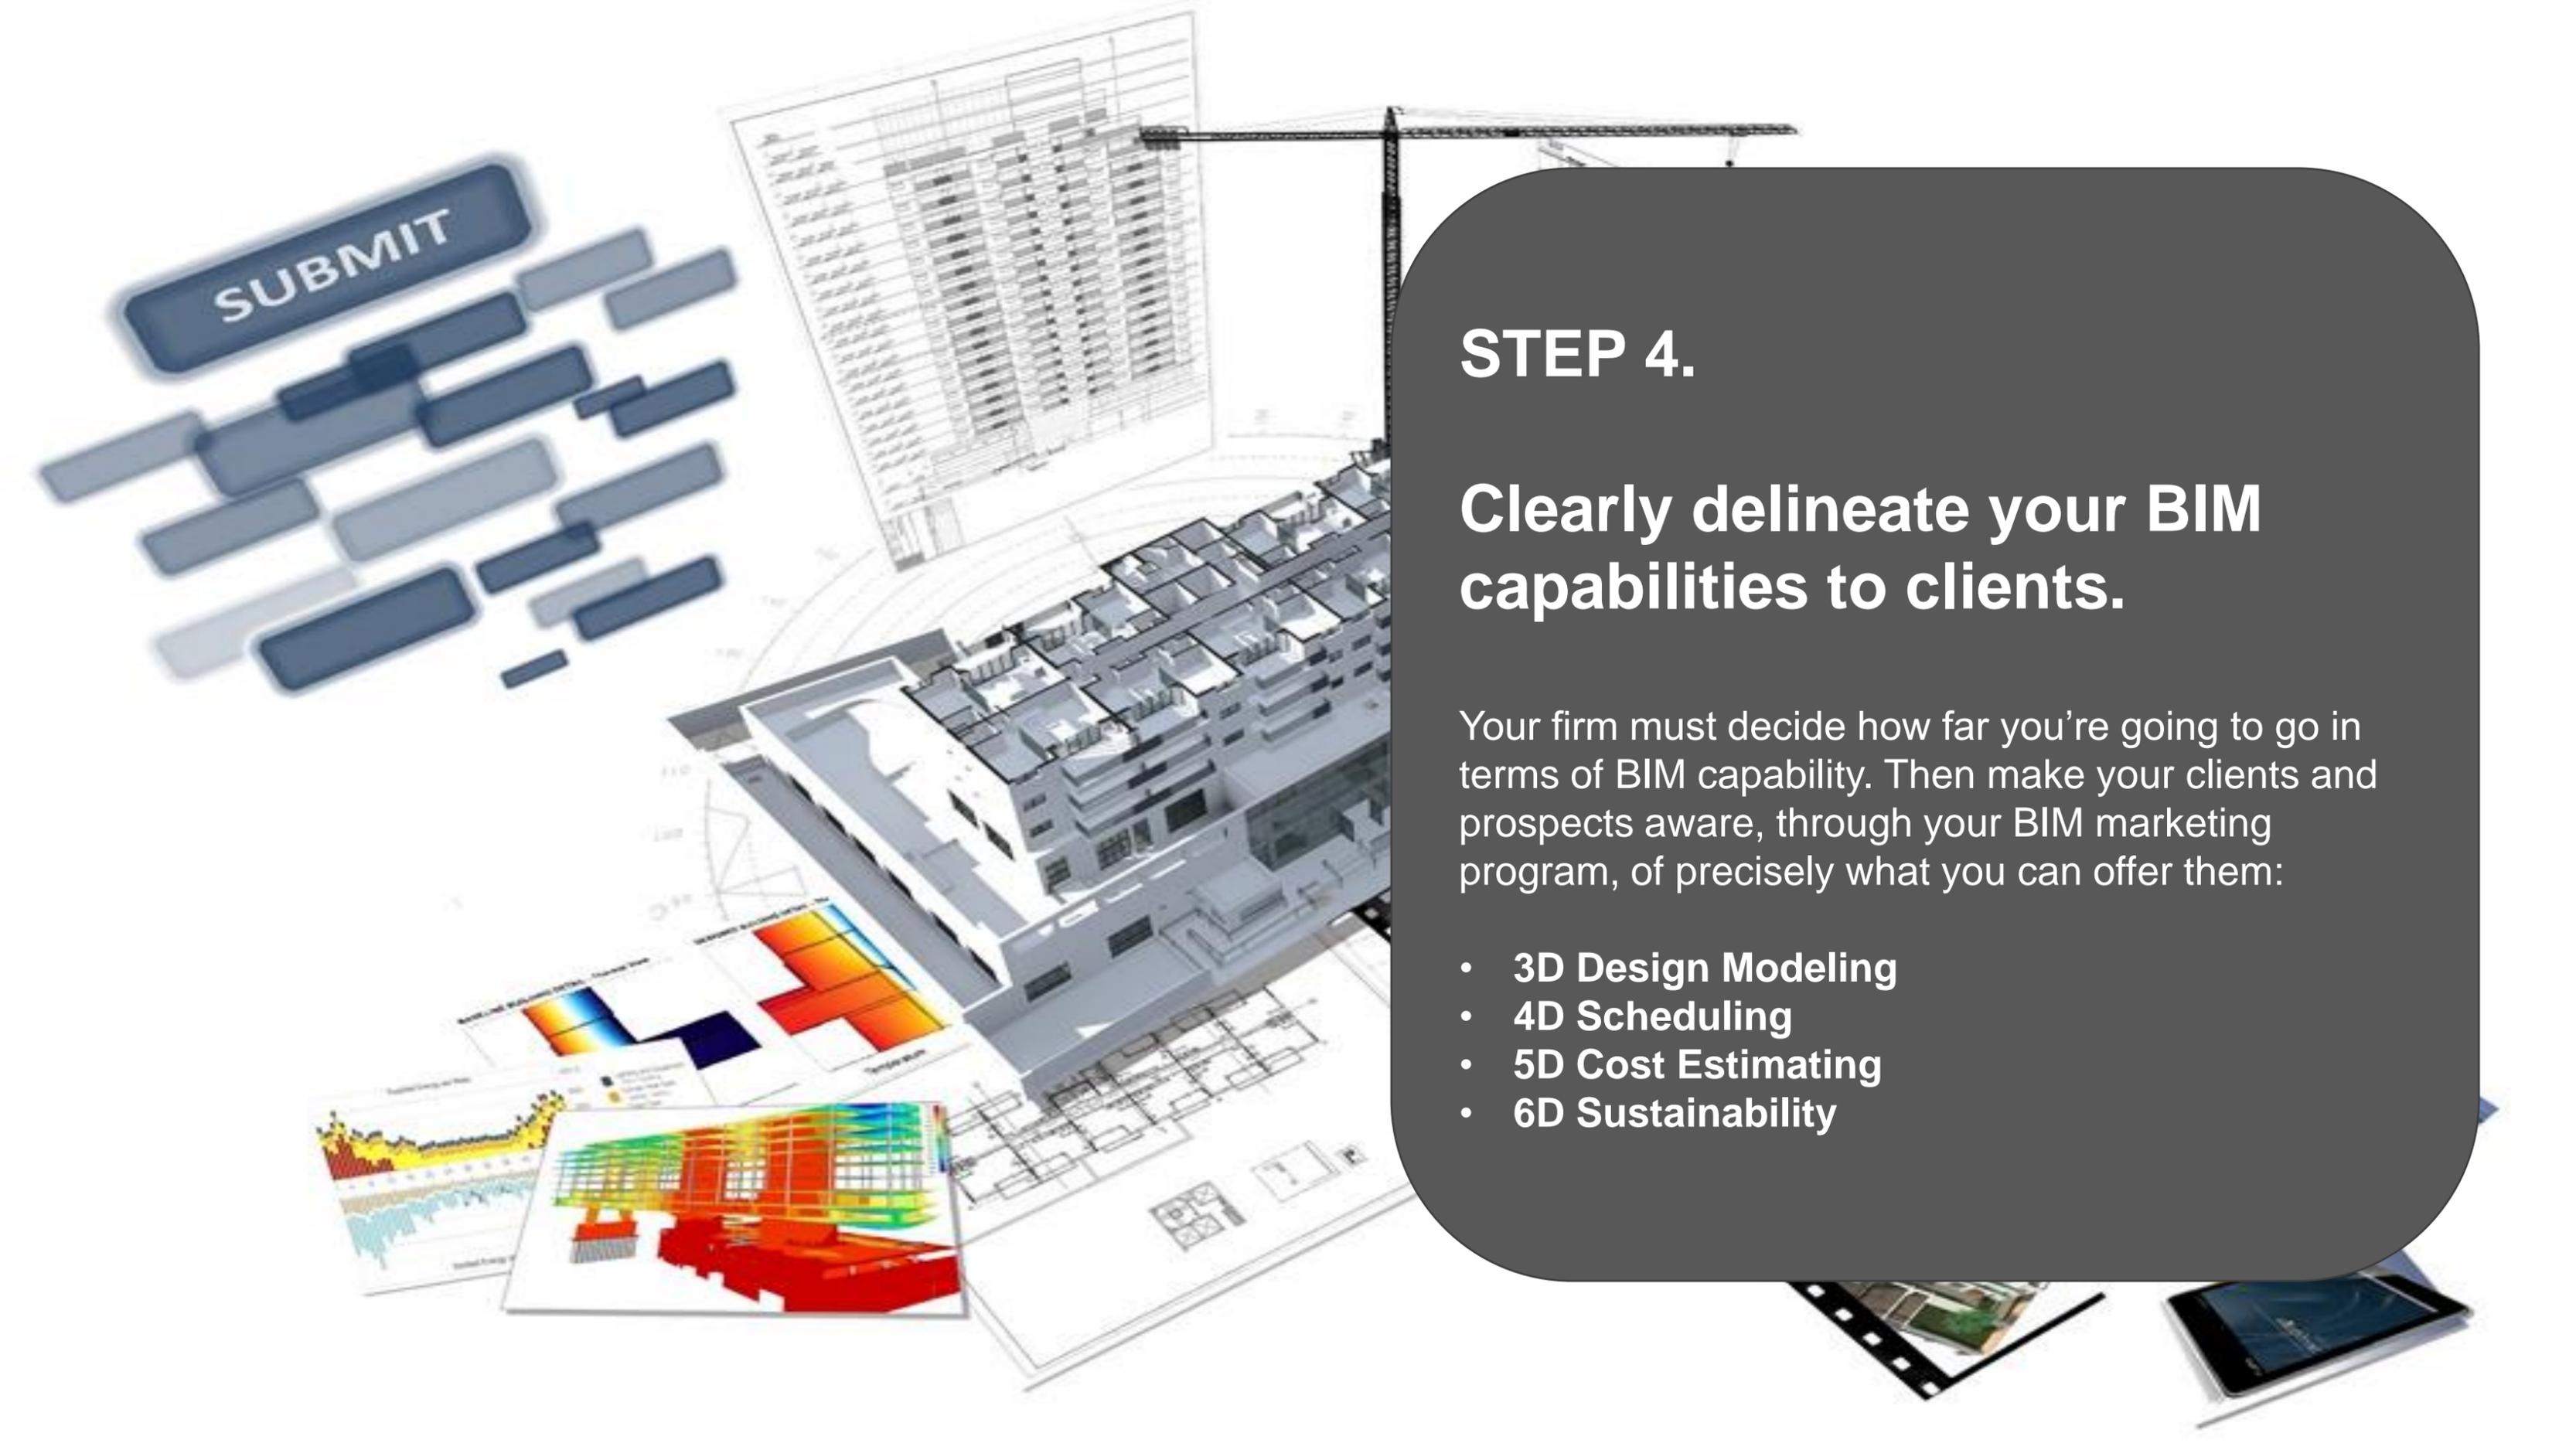

A BIM vision should clearly reflect your organizational culture as it relates to BIM and how it will define future direction related to staff roles and responsibilities, skill sets, service offerings, and strategic positioning. In other words, how does BIM fit within your organization, both structurally and philosophically? How will it change your business?

STEP 3.

Identify a BIM champion within your organization to lead the effort.

As the face of BIM in your organization, your BIM champion will have to reach out to a wide group of stakeholders, both internal—marketing, finance, principals—and external—clients, prospects, and their representatives. The BIM champion must be the kind of person who can listen to and understand the needs of clients and prospects and implement business strategies to meet those demands most effectively. At the same time, this person must have the ability to push back on those who resist change.

STEP 4.

Clearly delineate your BIM capabilities to clients.

Your firm must decide how far you're going to go in terms of BIM capability. Then make your clients and prospects aware, through your BIM marketing program, of precisely what you can offer them:

- 3D Design Modeling
- 4D Scheduling
- 5D Cost Estimating
- 6D Sustainability

STEP 5.

Embed BIM into your firm's marketing content. Start by creating a BIM portfolio.

The BIM portfolio is your firm's BIM résumé. You will need to combine your recent BIM project success stories with your core services to build a new presentation of your more robust capabilities. BIM can be presented as a set of processes, workflows, and technologies leveraged within your firm to aid in your core-service delivery. BIM portfolios should include a mix of media—images, animations, and roadmaps—that showcase your BIM capabilities.

YOUR COMPANY PROFILE

STEP 6.

Educate your client-facing staff on BIM trends, language, and culture.

Even the best marketing materials cannot win business without personal intervention. Client-facing staff, especially senior management and business development staff who interact with prospective and existing clients, need to know how to speak the language of BIM. They should not be expected to become technical experts, but they do need to stay on top of the trends in BIM within the industry and how your firm's BIM vision addresses those trends.

STEP 7.

Customize responses to RFPs and tailor them to the BIM-related needs of the client.

- Standards and processes
- Strategy plan – template to develop a project BIM execution plan
- Software requirements for each discipline
- Workflow processes and methodologies: meetings, clash detection, takeoffs, and reporting
- BIM model management procedures, content management, and archiving

STEP 8.

Prepare a customized approach.

Here is where you show your understanding of the client's needs and expectations relating to BIM. Ask questions and offer suggestions (if invited to do so). Appreciate the client's motive for using BIM. Brief the client on potential processes or obstacles they may not be aware of. Finally, write the response around the client's scope and showcase the BIM portfolio and capabilities.
