Honeywell

Why 'offline' ?

Why ?

Out in the Field

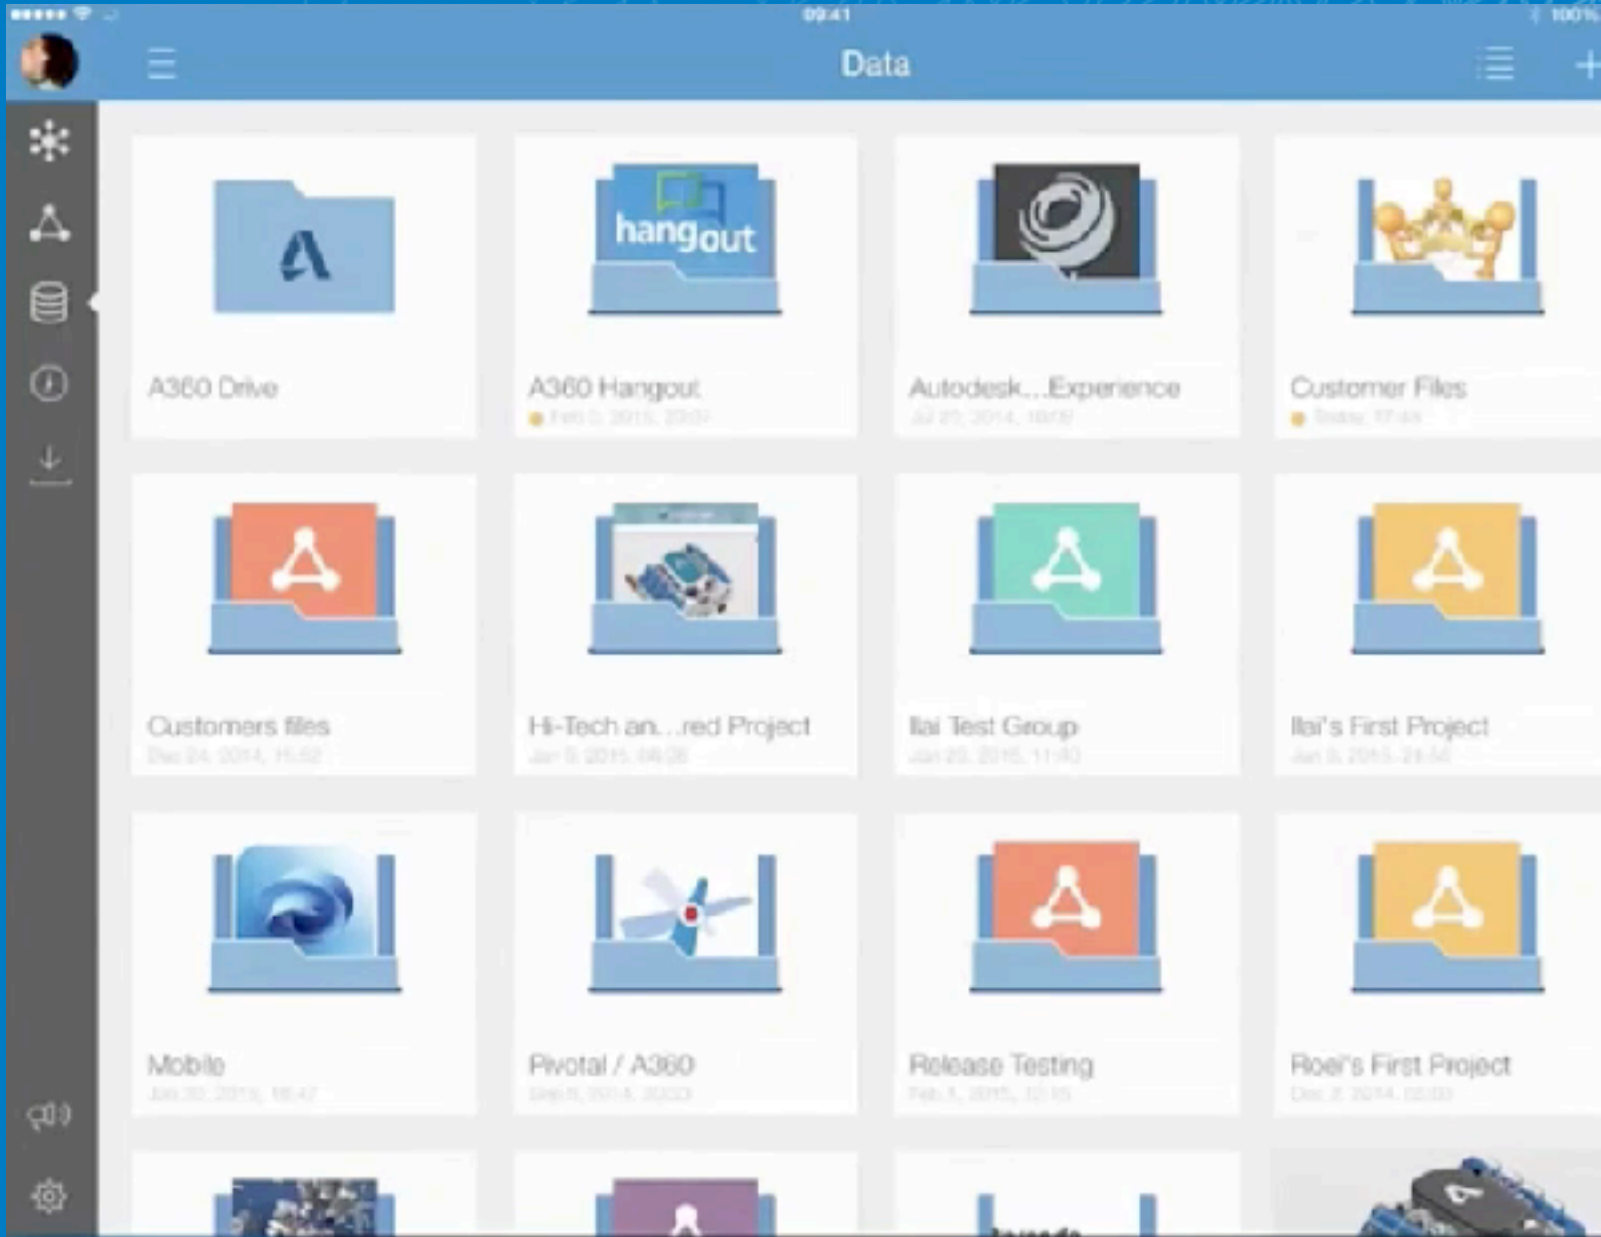

On Premises

*and speed

Case in point: A360, Field & BIM360 iPad App's

- User can select which designs to take offline
- Saved to IOS disk
- SVF's pulled from Network without Forge viewer3D.js
- Navis 3D engine (C++)

'How' to go offline ?

* with Forge

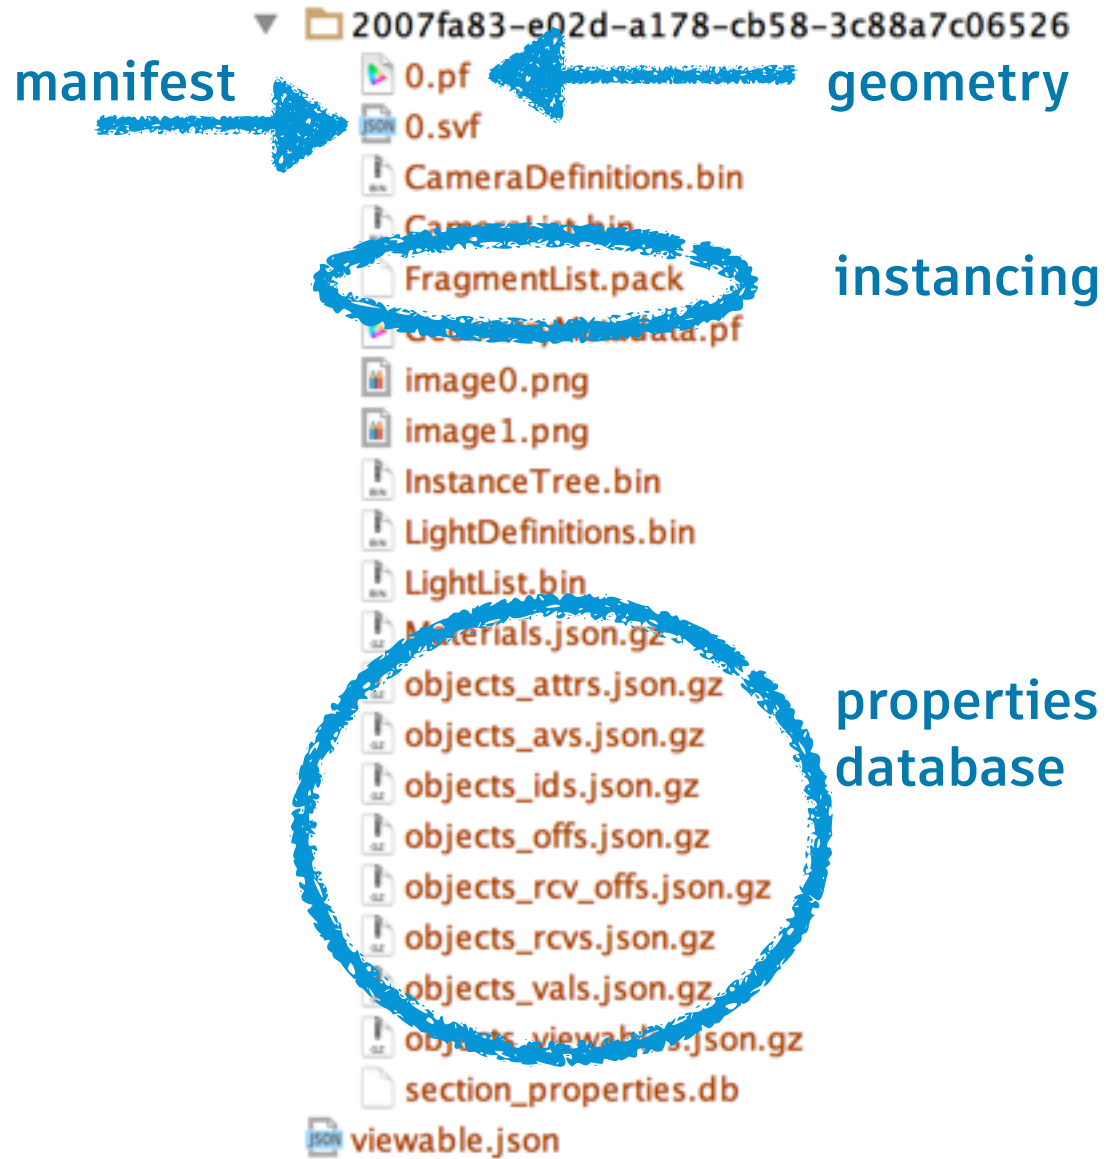

But first... where/when are SVF files created?

Let's Peek inside the SVF file...

SVF contents...

- https://forge.autodesk.com/cloud_and_mobile/2015/10/offline-support-with-view-data-api.html

Server side Scripts to help...

Some friendly blog posts to help you download SVF files...

Node.js

Philippe - <https://forge.autodesk.com/blog/forge-svf-extractor-nodejs>

- https://forge.autodesk.com/cloud_and_mobile/2015/10/offline-support-with-view-data-api.html

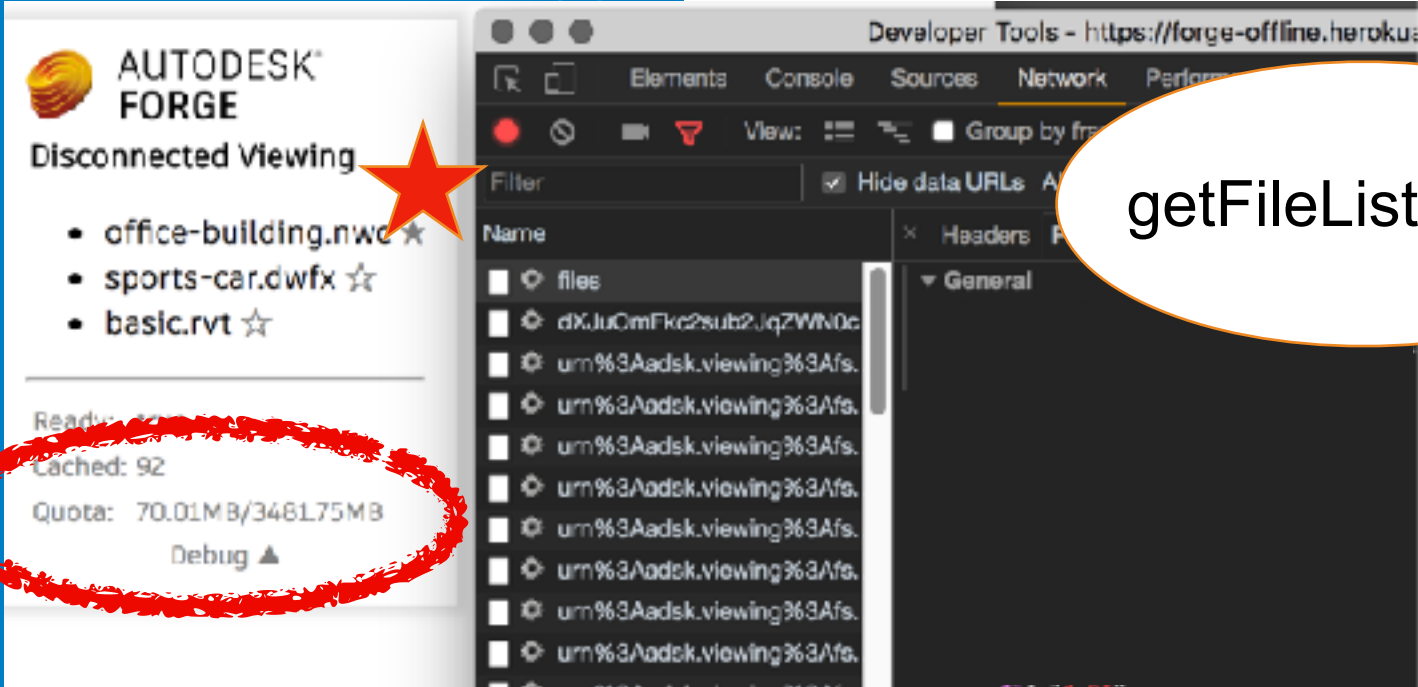

.NET

Augusto - <https://forge.autodesk.com/blog/forge-svf-extractor-c-net>

[http:// github.com/petrbroz/forge-disconnected](http://github.com/petrbroz/forge-disconnected)

SVF contents size? ...ask the cloud !

- How big is the SVF?
- limited iPad Storage quota
- no Forge viewer3D.js required

getFileList(URN)

calculate
.SVF contents

AWS Cloud

A Brief History of 'Offline'

*within the Forge Team

History of trying 'Offline'

“Autodesk A360 App”
Offline mode

“HTML 5 cache manifest”
built-in the browser

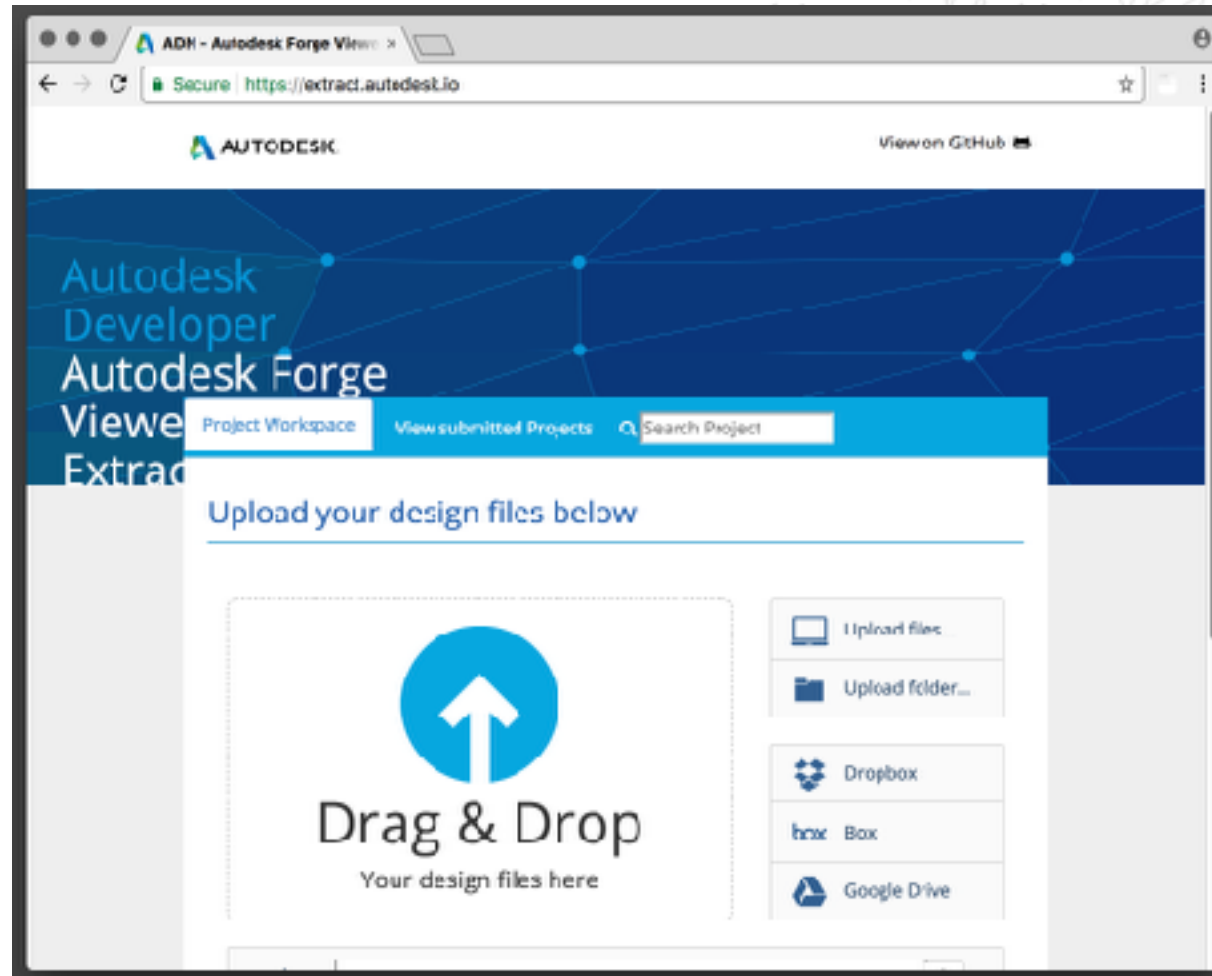

.NET and Node.js
“scripts”

“Extract.autodesk.io”
by Cyrille Fauvel

React Native
with offline

extract.autodesk.io

WebView > 'micro' webServer > local files

iPhone/Android - Cordova

Standalone App of Forge Viewer on iOS without Internet by Cordova

Xiaodong Liang
January 1, 2017

Xiaodong Liang

Xiaodong Liang has been with Autodesk since 2007, focus on providing programming support, consulting, training evangelism to external developers.

Happy New Year!

In the last post, I introduced how to produce a standalone executable application for Forge Viewer. At that time, I was also looking for the way that can apply to mobile OS. Apache Cordova is one of the approaches I was investigating. The practice proved my choice is correct :) By Cordova, the app is successfully running on my iPhone (**no Internet connection**).

Electron - WebView

Standalone Executable Project of Forge Viewer on PC without Internet by Electron

Xiaodong Liang
December 25, 2016

forge viewer 2.11
electron 1.4.11

Forge Viewer is a browser based technology, i.e. structure of BS. Although Forge Viewer supports *offline mode*, you will still need to setup a server-client environment. It is not a problem to run a localhost on the PC, however it would not much be practicable if you configure a localhost on the PC of your customers.

Recently, I got to know Electron. As it says: Electron provides the way to build cross platform desktop apps with JavaScript, HTML, and CSS. By this mean, your project will be looked like a standalone executable project, similar to typical desktop application. Electron accomplishes this by combining Chromium

React Native Offline

Philippe's Blog:

<https://forge.autodesk.com/blog/running-forge-viewer-react-native-offline>

- open source packaged called...
[react-native-static-server](#) does the heavy lifting to serve a folder as a web-server on iPhone/Android.
- Just copy your viewer.js and SVFs into the folder

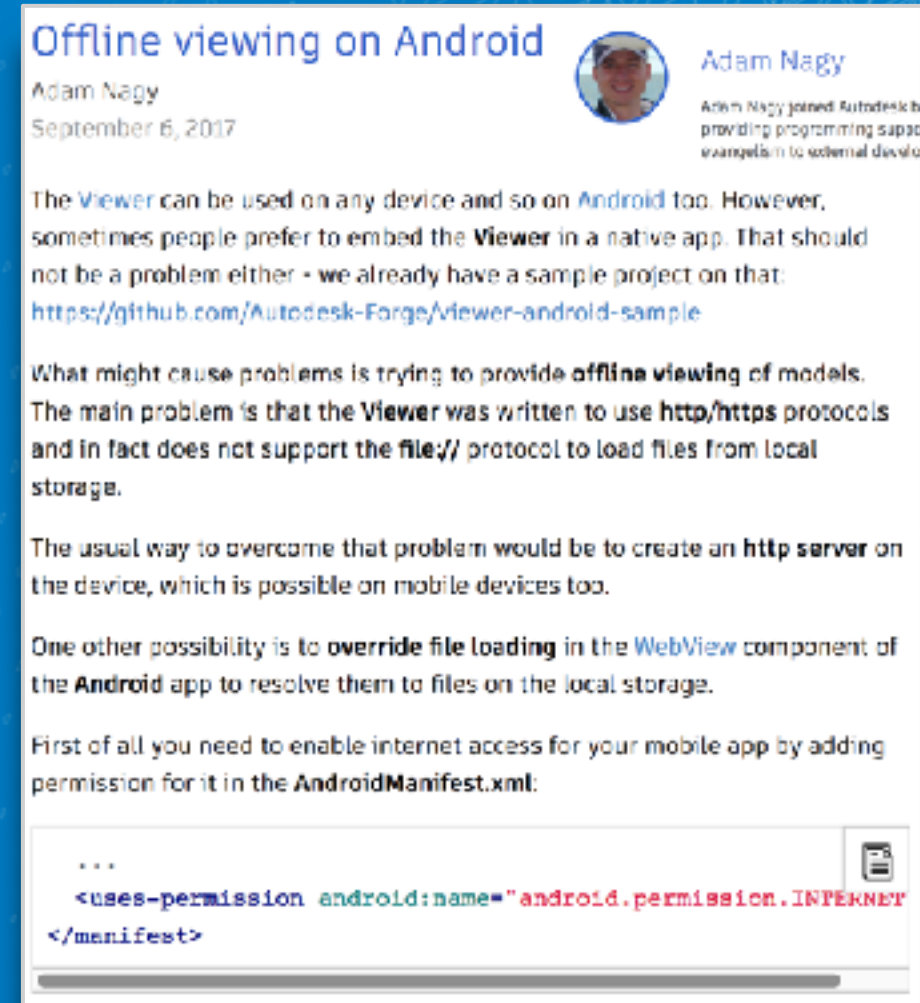

WebView > Files:// (Android only)

Adam's blog post:

Pro's: No 'micro' Server required

How? Rename .pf files to .mp3
(fool Android into decompressing zip stream)

Android - WebView

Offline viewing on Android

Adam Nagy
September 6, 2017

Adam Nagy joined Autodesk by providing programming support and evangelism to external developers.

The Viewer can be used on any device and so on Android too. However, sometimes people prefer to embed the Viewer in a native app. That should not be a problem either - we already have a sample project on that: <https://github.com/Autodesk-Forge/viewer-android-sample>

What might cause problems is trying to provide **offline viewing** of models. The main problem is that the Viewer was written to use **http/https** protocols and in fact does not support the **file://** protocol to load files from local storage.

The usual way to overcome that problem would be to create an **http server** on the device, which is possible on mobile devices too.

One other possibility is to **override file loading** in the **WebView** component of the **Android** app to resolve them to files on the local storage.

First of all you need to enable internet access for your mobile app by adding permission for it in the **AndroidManifest.xml**:

```
...  
<uses-permission android:name="android.permission.INTERNET"  
</manifest>
```

WebView > HTML5's cache.manifest

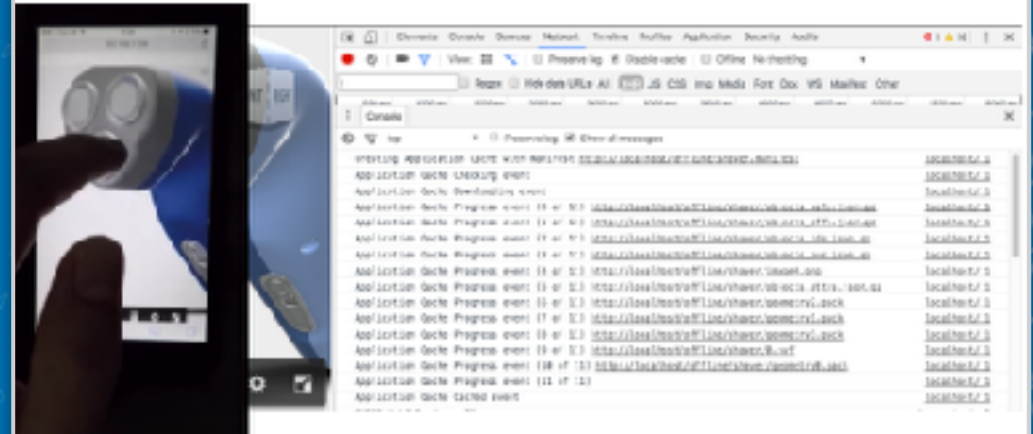

Augusto's blog post:

<https://forge.autodesk.com/blog/viewer-airplane-mode>

Viewer on "airplane mode"

Augusto Goncalves

April 6, 2017

Follow @augustomala

Browsers have a cool feature for cache manifest, described here for [Safari \(iOS\)](#). The idea is quite simple: create a manifest file with a list of all files required to run a specific website (or webapp). Does it work on Viewer? Yes! See this video:

Developer Advocate at Autodesk since 2008, working with both desktop and web/cloud apps using top technologies, like C#, JavaScript, NodeJS and any other that can solve problems

‘Disconnected’ is the new ‘offline’

Petr Broz Blog: [https:// forge.autodesk.com/blog/disconnected-workflows](https://forge.autodesk.com/blog/disconnected-workflows)

PWA - a new HTML5 approach

* Progressive Web Apps

'Disconnected' Applications

Concepts:

- Service Workers
- Channel Messaging
- Cache Strategy

New Tools

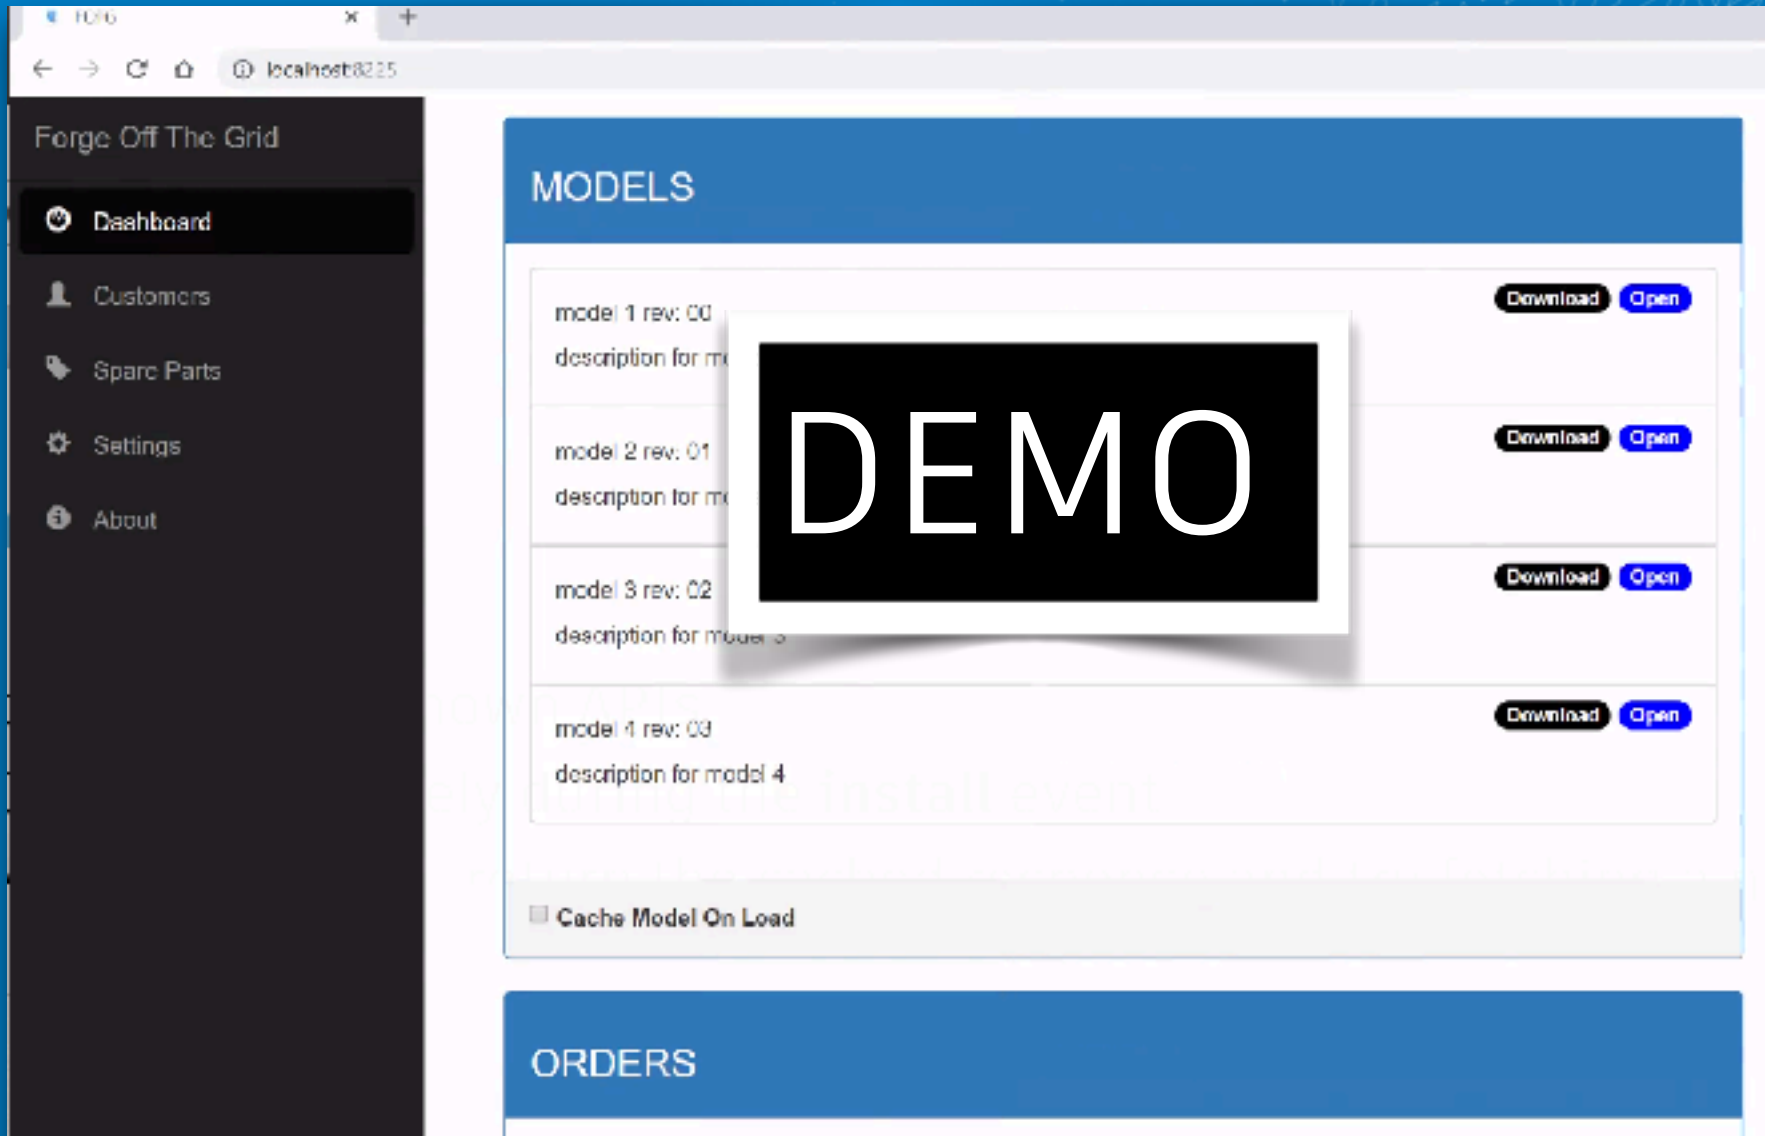

> Chrome Dev Console

Manage:

- Background Processes
- Clear Storage
- IndexedDB

The screenshot shows the Chrome DevTools Application panel for the URL `https://forge-offline.herokuapp.com/`. The 'Service Workers' section is active, displaying the following details:

- Service Workers:** Offline Update on reload Bypass for network
- forge-offline.herokuapp.com** [Update](#)
- Source:** [service-worker.js](#)
- Received:** 11/7/2018, 8:57:03 AM
- Status:** ● #1046 activated and is running [stop](#)
- Clients:** <https://forge-offline.herokuapp.com/> [focus](#)
- Push:** Test push message from DevTools.
- Sync:** test-tag-from-devtools
- Service workers from other domains:**

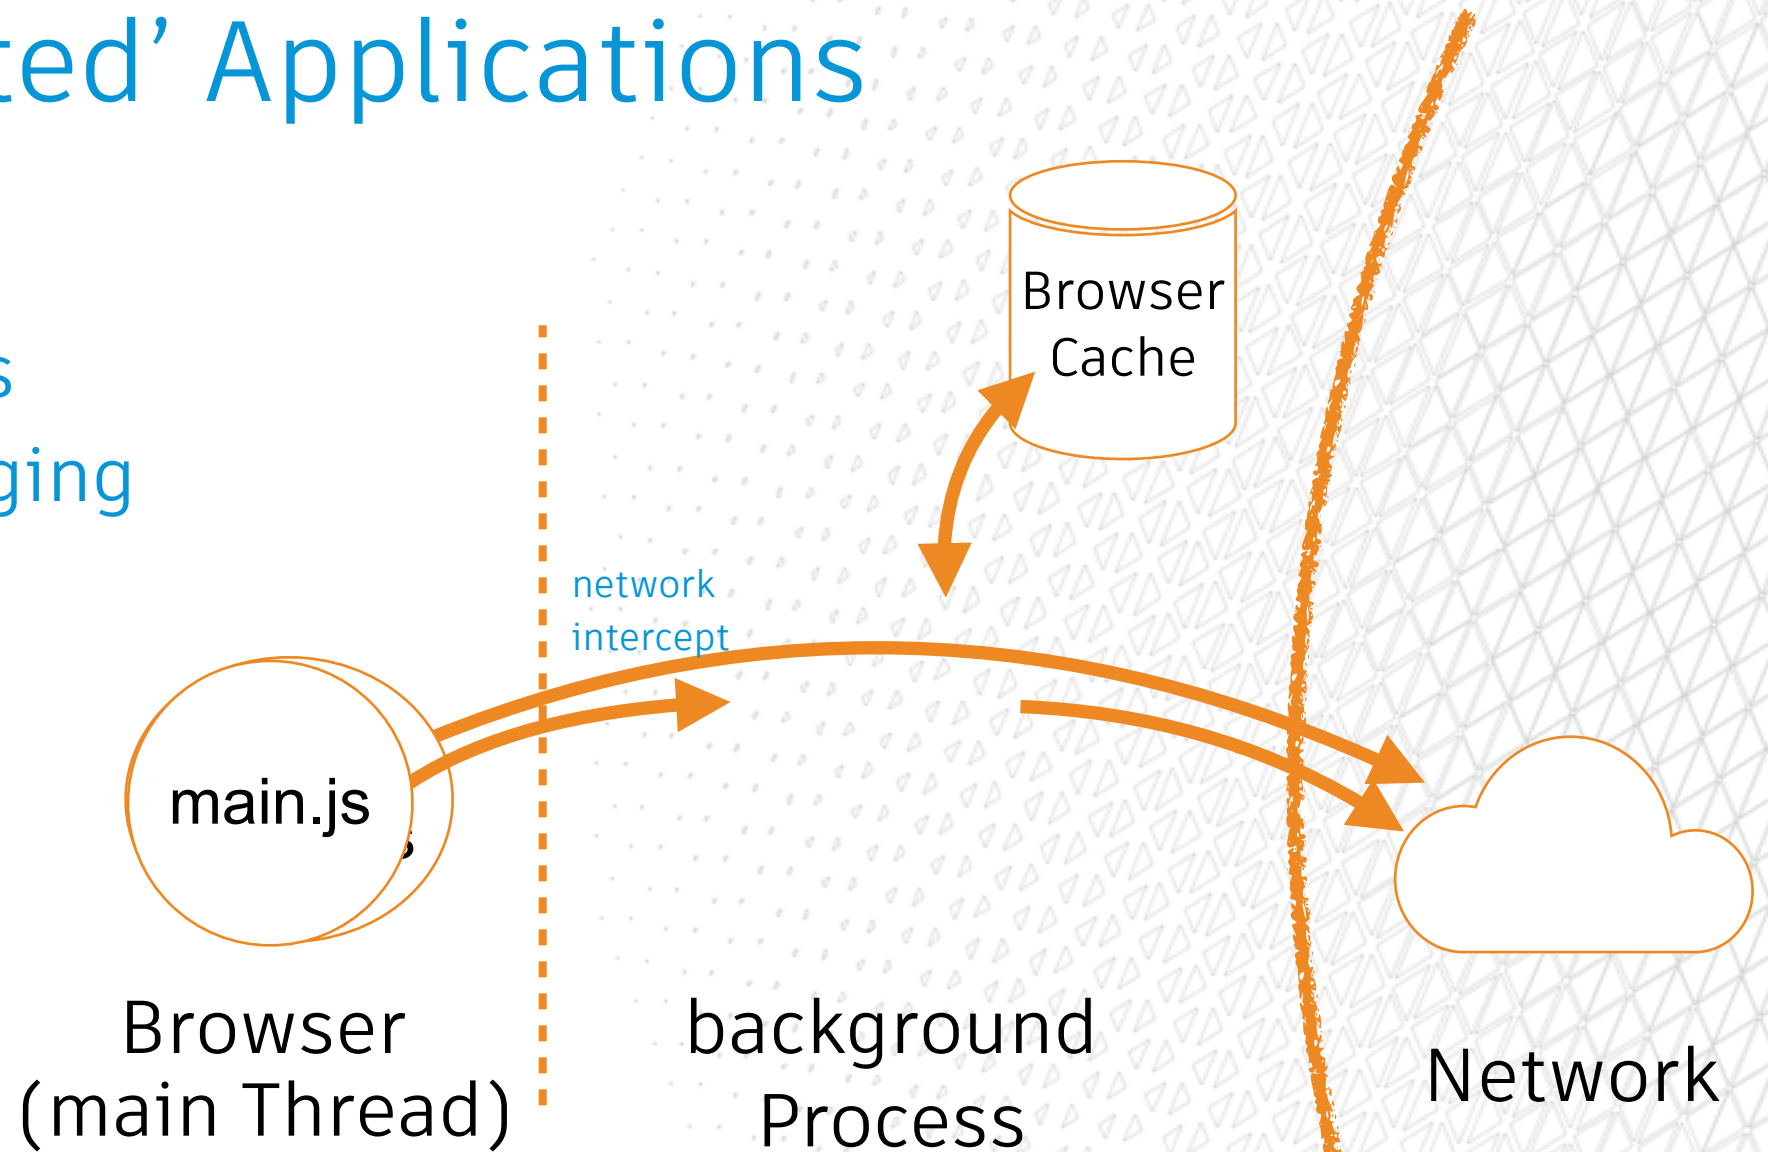

Let's review...

'Disconnected' Applications

Concepts:

- Service Workers
- Channel Messaging
- Cache Strategy

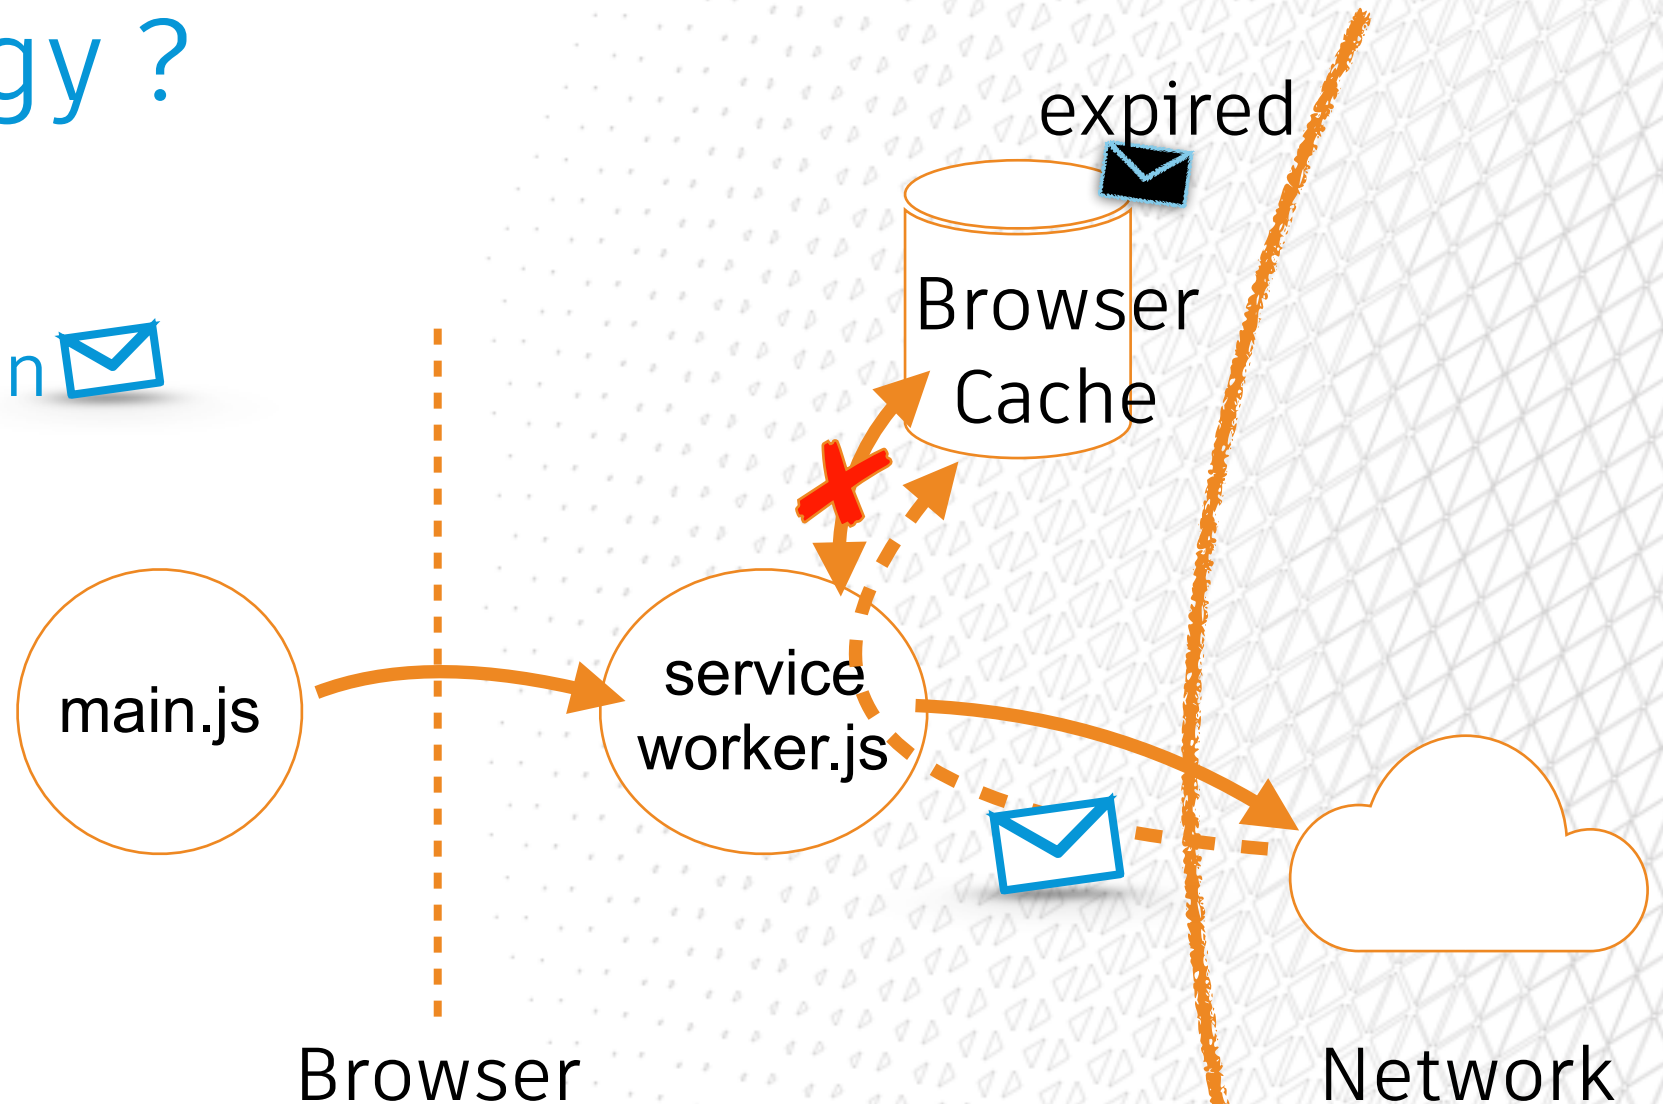

Step2 - add 'Forge Viewer'

- * How to handle 'Auth Tokens' ?
- * What is a Cache Strategy ?

Cache Strategy ?

Business Logic

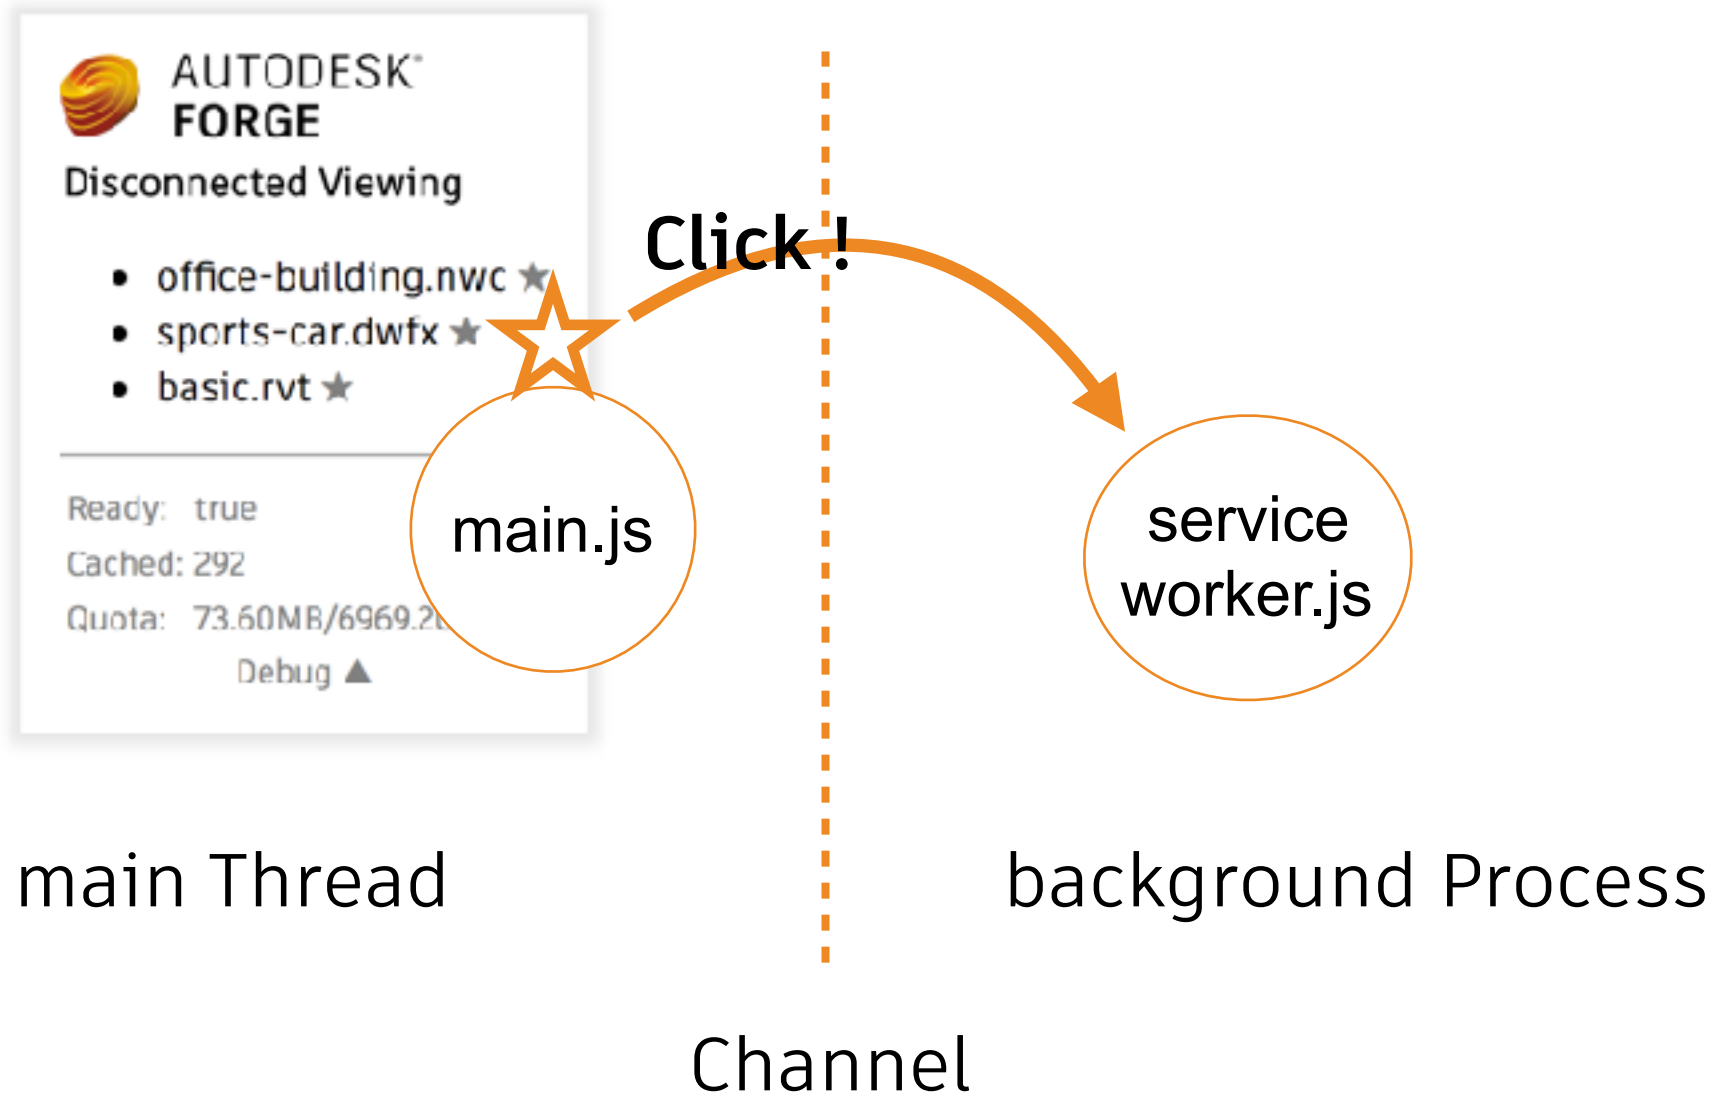

- freshest Auth Token 
- expired Old Files
- etc

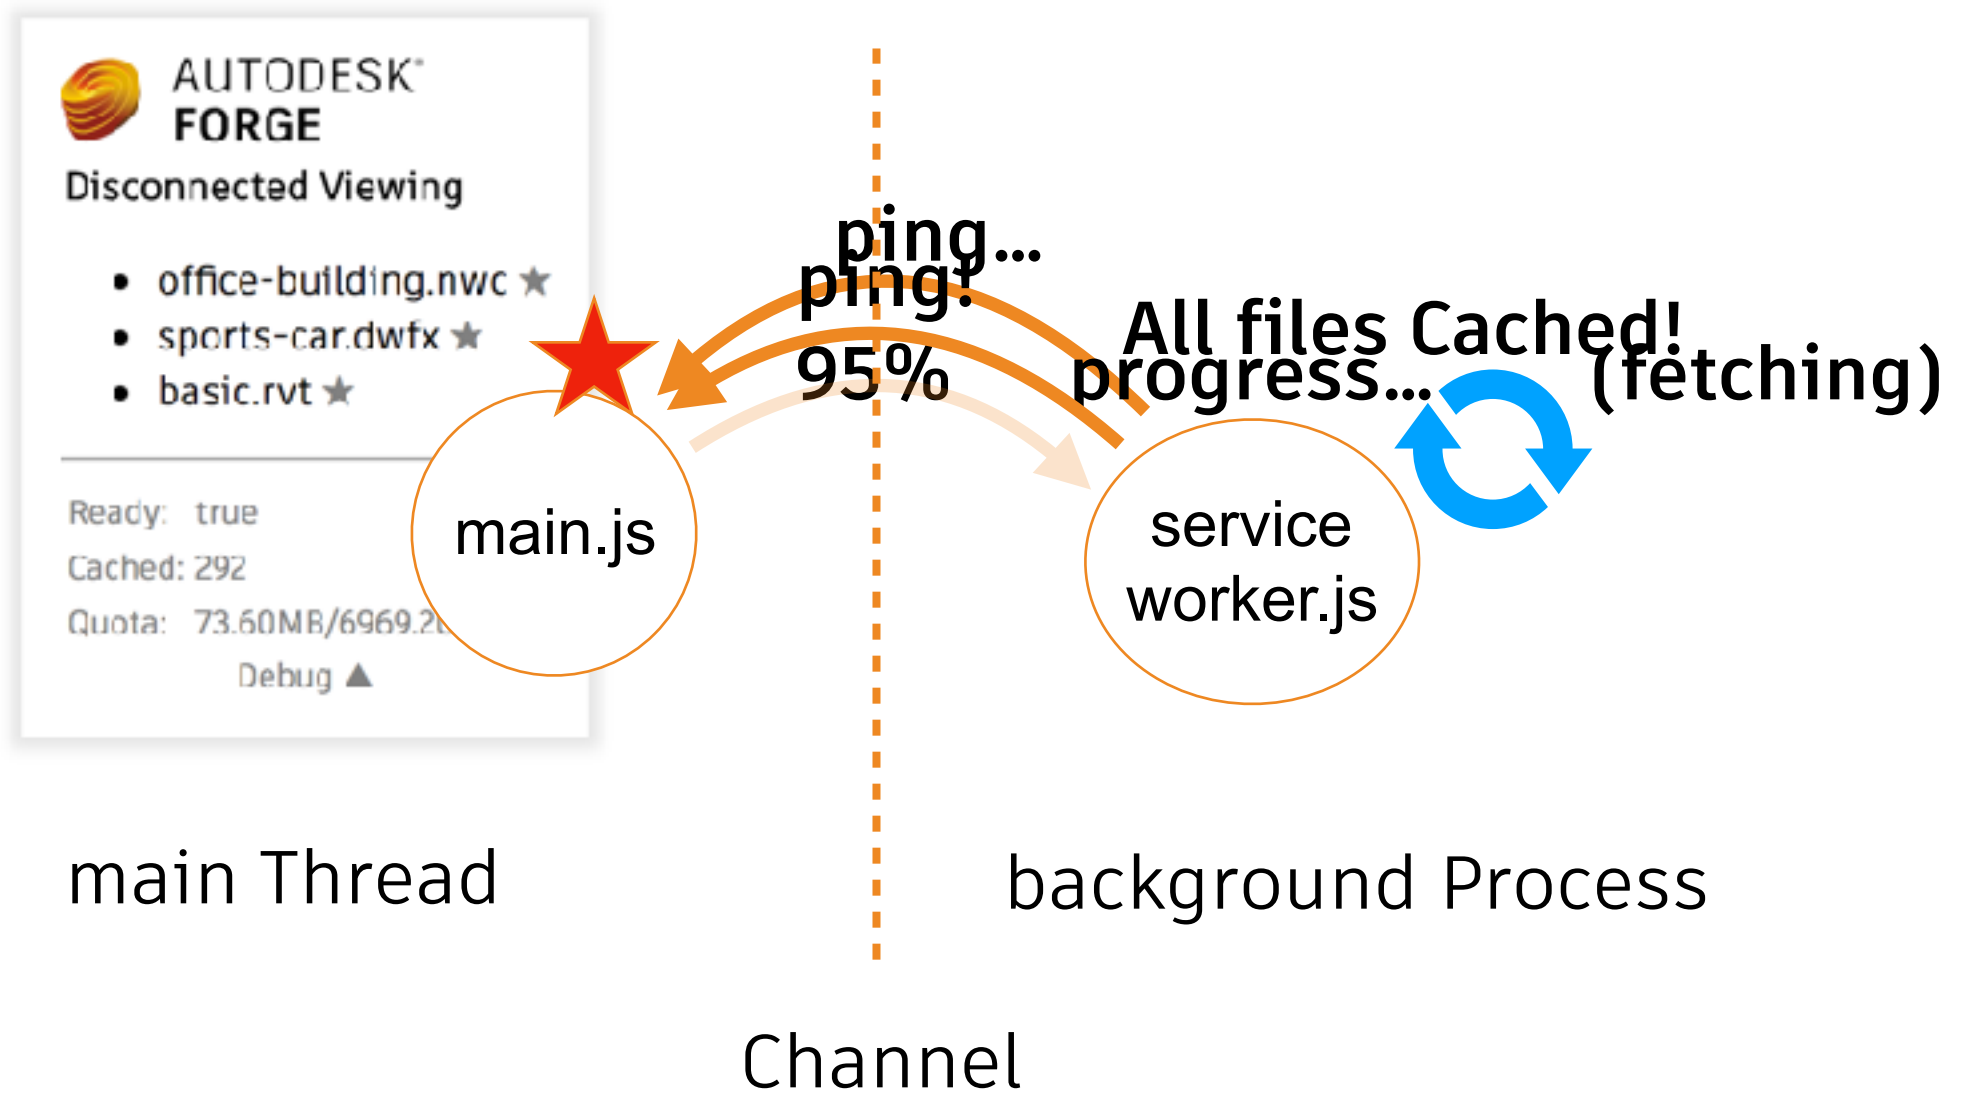

Step3 - Messaging

* What is the “Message Channel” ?

Messaging

Messaging

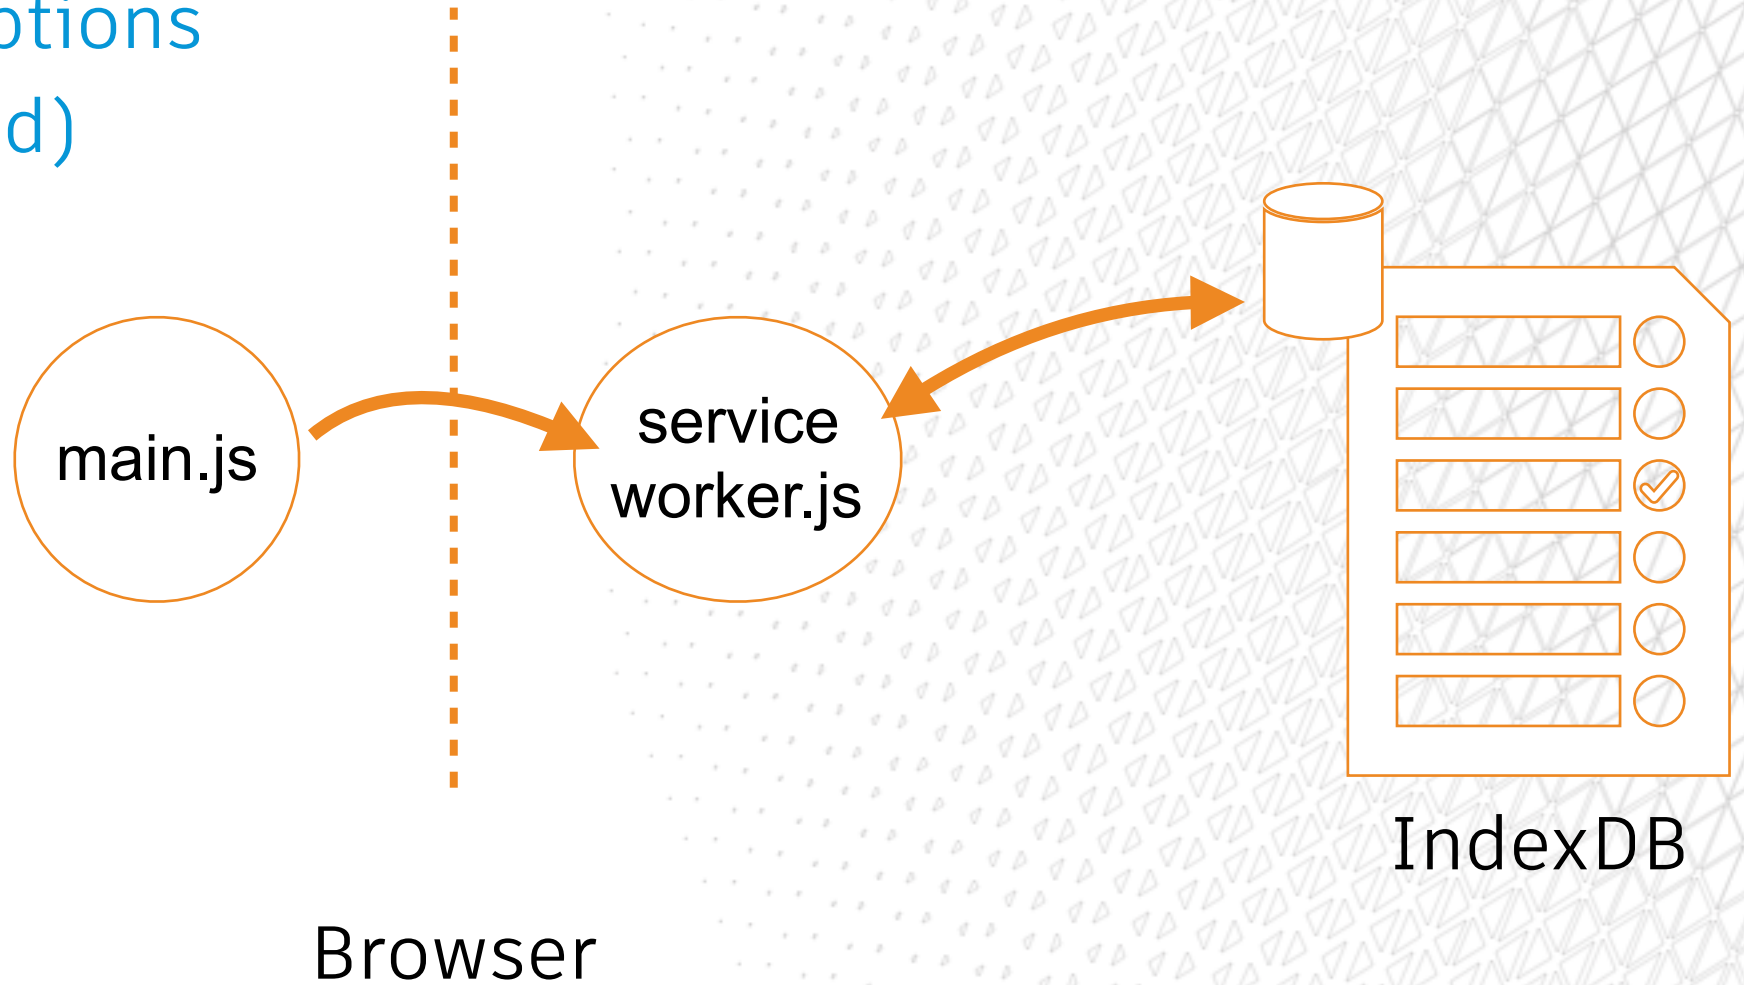

Step4 - browser storage

* How to track what's in my cache ?

Browser Storage

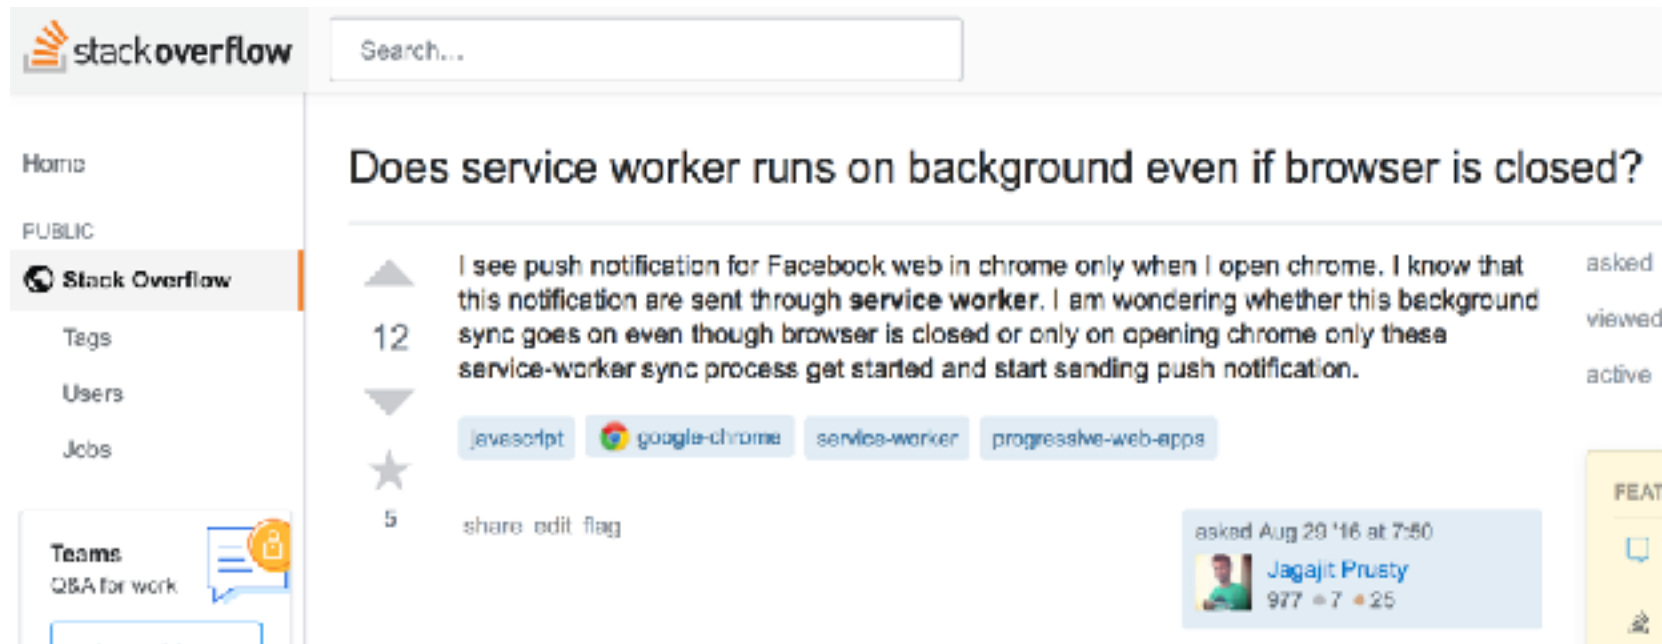

HTTP5 storage options

- indexDB (shared)
- localStorage*
- webSQL*

Gotchas

- Service workers only enabled in HTTPS context (with localhost as an exception)
 - At one point, <http://localhost> not working in Google Chrome, but fine now
- Service workers only intercepting local requests under their scope

The screenshot shows a Stack Overflow question page. The question title is "Does service worker runs on background even if browser is closed?". The question text reads: "I see push notification for Facebook web in chrome only when I open chrome. I know that this notification are sent through service worker. I am wondering whether this background sync goes on even though browser is closed or only on opening chrome only these service-worker sync process get started and start sending push notification." The question has 12 votes, 5 answers, and is marked as "asked", "viewed", and "active". The tags are "javascript", "google-chrome", "service-worker", and "progressive-web-apps". The asker is Jagajit Prusty, asked on Aug 29 '16 at 7:50. The left sidebar shows the Stack Overflow navigation menu with "Stack Overflow" selected.

FORGE DevLab

- Tuesday, November 13, 1:30 p.m. – 5:30 p.m. in Galileo 1002 (Level 1)
- Drop-in workshop / informal lab for software developers of all skill levels - come and go
- Get one-to-one help and advice on using the Forge APIs
- DevLab is open to all Forge DevCon and Autodesk University attendees
- Book a 30 minute slot in the Class Catalog (enter Forge DevLab in the search bar) or
- Forge experts available all afternoon to answer your questions or help you get started
