

Injection Molding Fiber Orientation, Property Predictions, and Failure Analysis

Presented by

Robert Sherman

Senior CAE Analyst, RTP Company

What We'll **TRY** to Cover

- Source of Fiber Orientation
 - What Causes it
- New AMI 2012 Analysis Features
 - RSC Factor & Its Effects
- Modulus (& Stress) Predictions
 - Without RSC
 - Various RSC Factors
- Improved Stress Predictions

Structural Composites from the Injection Molding Process

- Injection molding products are being utilized in increasingly structural applications
- To date, analysis has consisted of quasi-isotropic analysis
- Quasi-isotropic analysis **CANNOT** optimize orthotropic materials properly
- Orthotropic analysis requires failure analysis and strength allowables
- What can be utilized???

Structural Composites from the Injection Molding Process

- Sensible approach to the problem: Composite laminate analysis
 - Injection molded materials can be treated like continuous fiber composites
 - Problem : Infinite number of orientations!
 - Systematic approach for evaluation is needed in order to prevent unexpected failures
 - Linear material approach initially

What Causes Fiber Orientation ?

- Two primary forces
 - High shear rate & velocity gradient through part thickness
 - Extensional forces in flow front expansion and contraction
- Fiber orientation is “history” dependent – effects are cumulative as polymer flows from gate to end-of-flow

What Causes Fiber Orientation ?

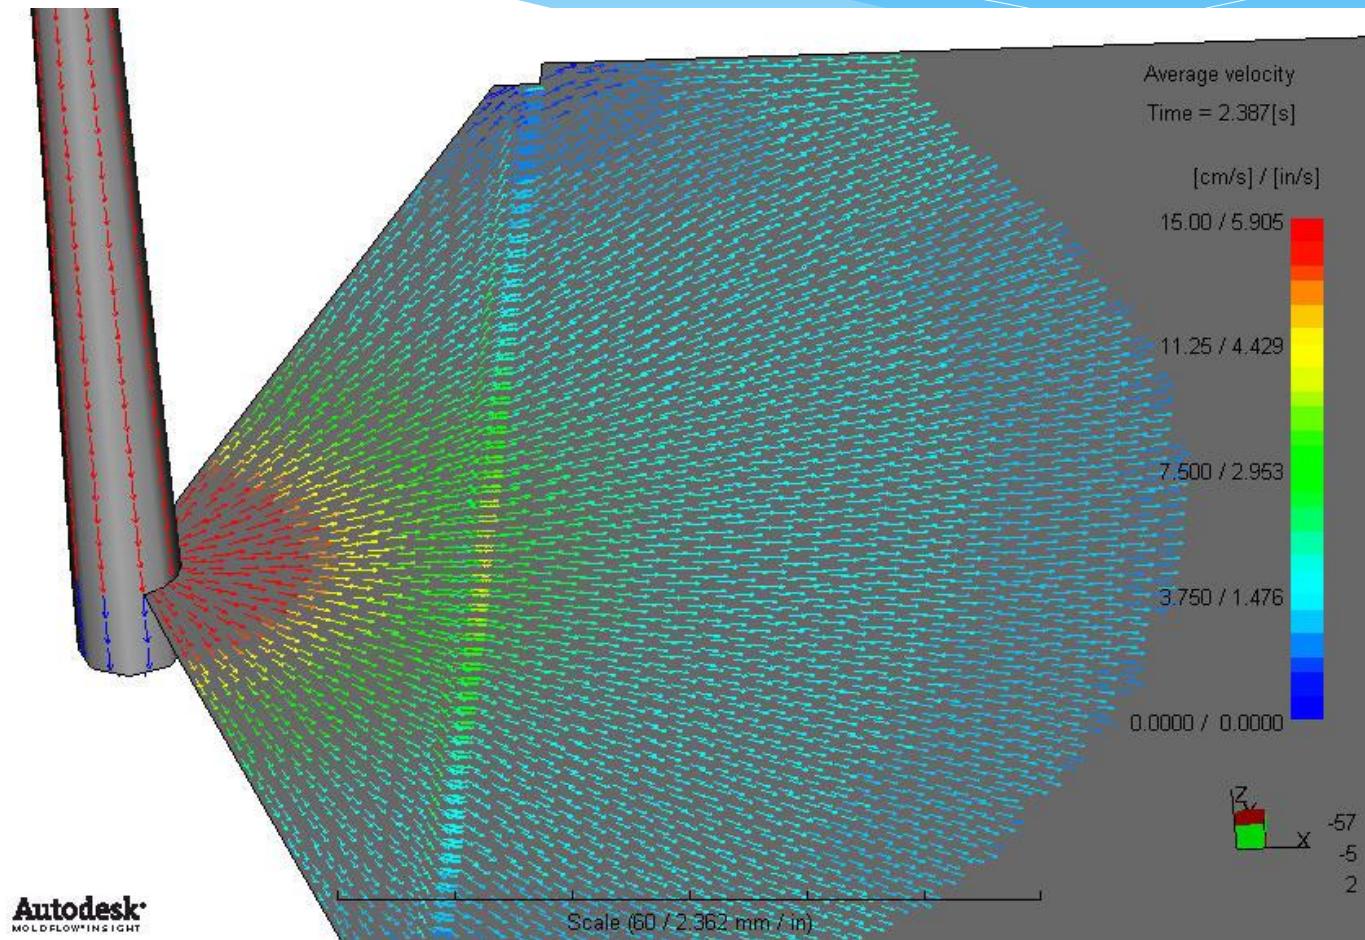

Autodesk
MOLDFLOW OPTIMIZER

What Causes Fiber Orientation ?

What Causes Fiber Orientation ?

Fiber Orientation

- Shearing forces in outer laminates
- Expansional/contractional forces in middle laminates
- Changing flow directions during fill/pack
- Orientation behavior is sum of the cumulative effects

Autodesk® Moldflow® Insight

New Analysis Features

- Fill Preview (real-time fill prediction solver)
- Inventor Fusion Interface for model simplification
- Transient cooling analysis
- Venting analysis
- Long fiber orientation capability (ARD model)
- Short fiber orientation improvements (RSC model)

Reduced Strain Closure (RSC) Factor

- All fiber orientation predictions previously were fully developed “steady state” orientation
- Reality – orientation takes time to fully develop
- RSC factor introduced to control the rate of development of orientation
- Problem: limited validation to date (Delphi; 2 PBT materials)
- Take “cup half-full” approach

How Can We Validate Fiber Orientation ?

- Qualitative validation can utilize microscopy
 - Made quantitative with shape recognition software
- Micro tomography analysis (Skyscan)
- Simpler (cheaper) method of validation needed for number of materials needing validation
- Utilize tensile modulus predictions and measurements as “first cut” validation
- Later confirm with flexural stiffness verification

What does RSC Factor Do?

1.00

0.50

0.20

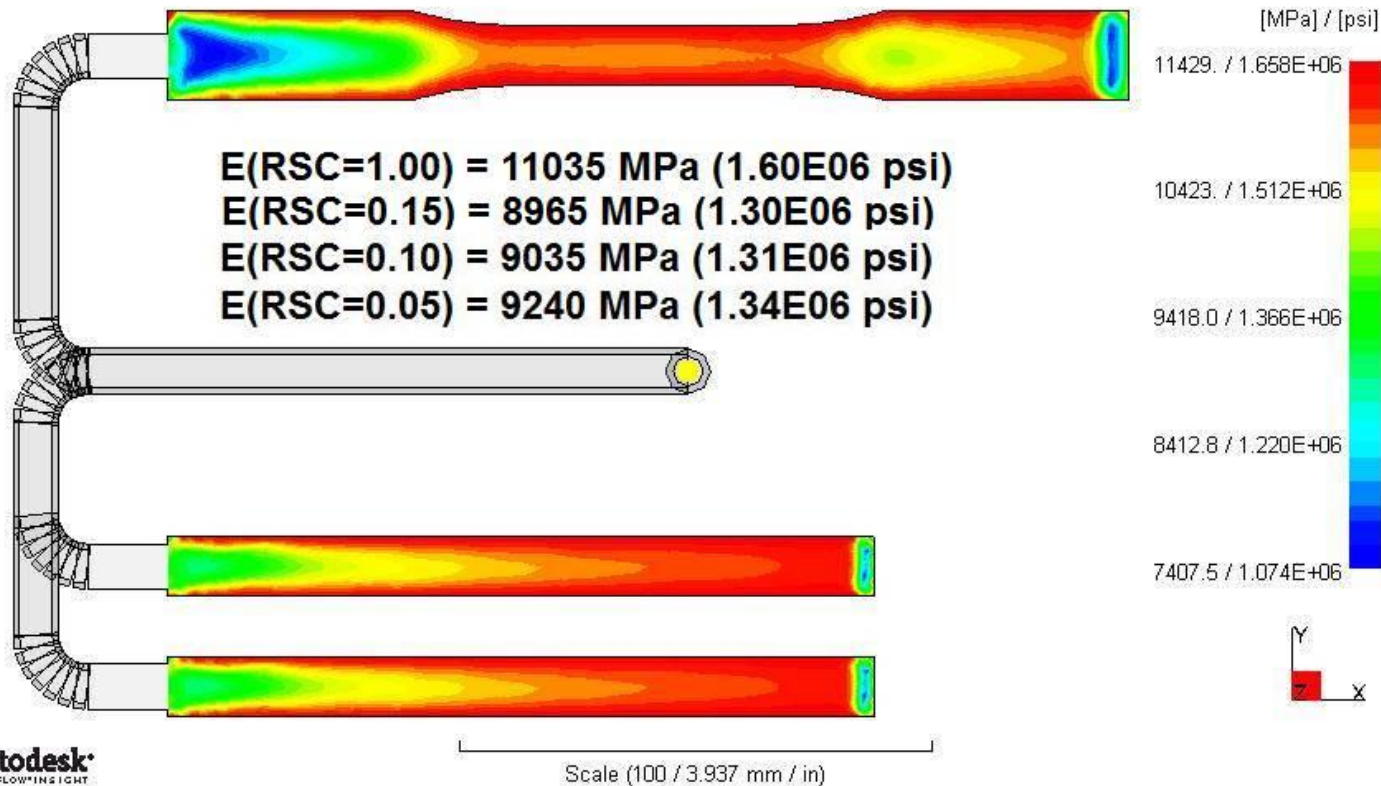

0.05

Look at Molded Tensile Bars First

E(test) = 8760 MPa (1.27E06 psi)

Tensile modulus in first principal direction (fiber)
= 11429. / 1.658E+06 [MPa] / [psi]

Flow Direction Modulus (RSC=1.00)

$t = 3.05 \text{ mm (0.120 in)}$

Flow Direction
Modulus -
MPA (E06 psi)
vs
RSC = 1.00

$t = 3.05 \text{ mm}$
 (0.120 in)

Autodesk
MOLDFLOWINSIGHT

Modulus Transverse to Flow (RSC=1.00)

$t = 3.05 \text{ mm (0.120 in)}$

Transverse
Modulus - MPa
(E06 psi)
vs
RSC = 1.00

$t = 3.05 \text{ mm}$
(0.120 in)

Flow Direction Modulus (RSC=0.15)

$t = 3.05 \text{ mm (0.120 in)}$

Modulus Transverse to Flow (RSC=0.15)

$t = 3.05 \text{ mm (0.120 in)}$

Transverse
Modulus - MPa
(E06 psi)
vs
RSC = 0.15

$t = 3.05 \text{ mm}$
 (0.120 in)

Flow Direction Modulus

$t = 6.35 \text{ mm (0.250 in)}$

Modulus Transverse to Flow

$t = 6.35 \text{ mm (0.250 in)}$

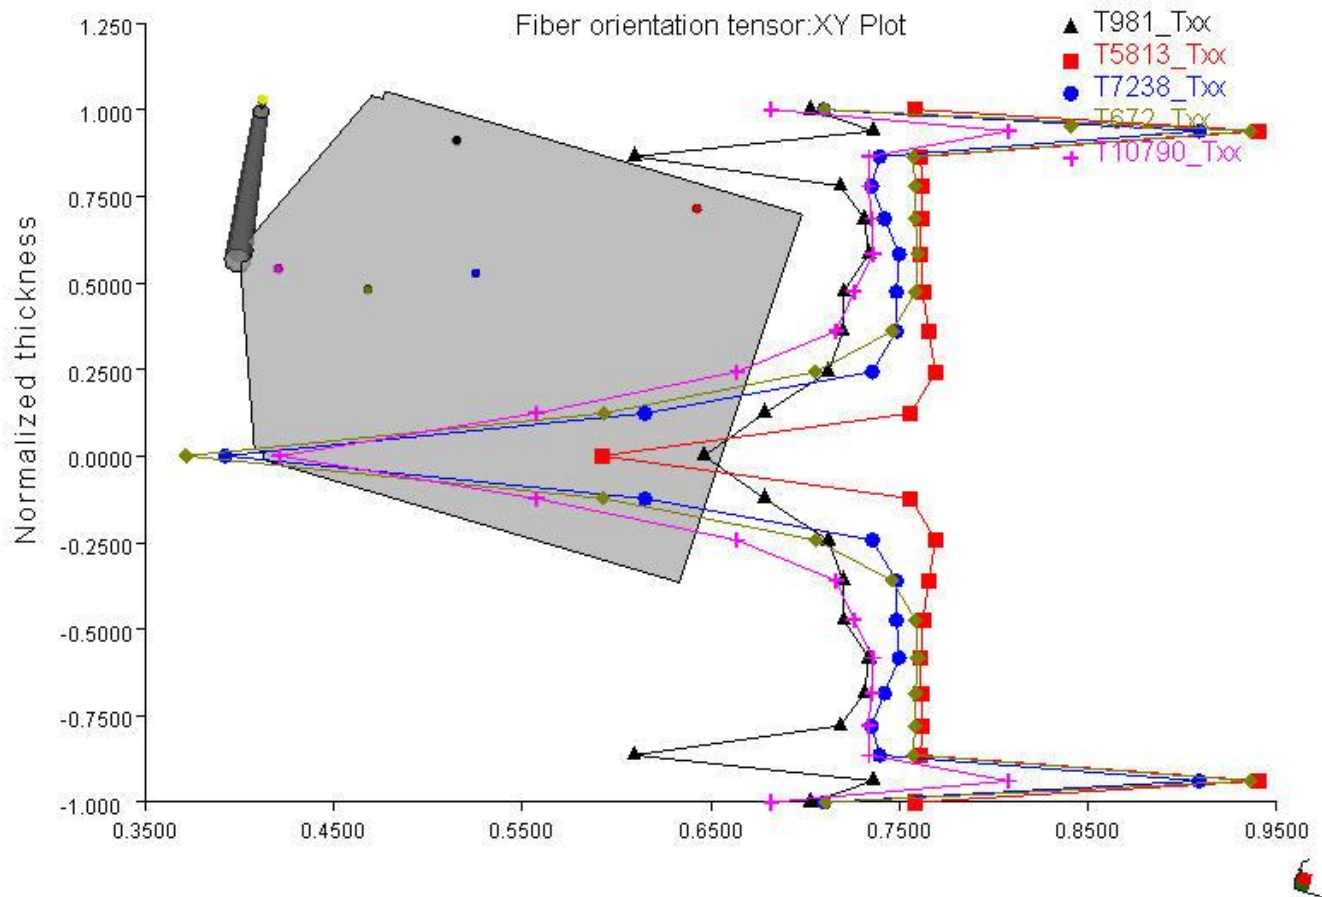

Transverse
Modulus -
MPa
(E06 psi)

$t = 6.35 \text{ mm}$
(0.25 in)

Laminate Stress Analysis

Summary

- RSC factor clearly **seems** to improve the fiber orientation predictions
- More correlation is needed (flexural modulus)
- Other possible influencing factors may need improvement
 - Relook at fiber A/R utilized (usually too low)
 - Other boundary conditions
- More materials to determine factors influencing RSC

Thank You!
