How to Successfully Implement Factory Design Suite

Todd Schmoock

Applications Consultant

Synergis Technologies, LLC

todd.schmoock@synergis.com

Learning Objectives

- Discover the most common mistakes that are made and learn how to avoid them
- Discover what files and folders need to be shared in a multiuser environment
- Discover how to manage 2D and 3D content, and keep them updated
- Discover how to manage asset creation, and how to get started creating it

Description

Are you looking at implementing Factory Design Suite at your company? Maybe you are in the process of implementing Factory Design Suite, or you tried to implement Factory Design Suite and had some issues. With all of the variables to consider like how many employees will need access, will some need to access while traveling, shared content, creating content, templates, drawing/project properties, etc. it can be overwhelming. This class will allow you to see how others have implemented the Factory Design Suite software, and will give best practices from companies using Factory Design Suite who have implemented it successfully.

Your AU Experts

Todd is a graduate of Delaware Valley University in Doylestown, Pa. He has over 25 years' experience in the mechanical engineering field. Ten years of this time was spent as a documentation specialist/designer at Honeywell, Inc. where he worked on several government contracts which required strict drafting and design documentation in accordance with government standards. Additional experience comes from working in the technical ceramic, elevator, and specialty gas industries designing equipment for each of these fields. Todd joined Synergis in 2003 as a Solutions Engineer where he began providing assistance to customers through training and consulting, helpdesk support, as well as providing pre-sales support. The years spent as a CAD Supervisor has helped him make a smooth transition to his Synergis role. Todd is an Autodesk Inventor Certified Expert and a Manufacturing Solutions Implementation Certified Expert.

How to Successfully Implement Factory Design Suite Checklist:

Have you implemented Factory Design Suite? Have you tried implementing Factory Design Suite? Do you want to implement Factory Design Suite? If the answers to any of these questions are yes please consider these questions:

- What are the most common mistakes made and how do you avoid them?
- What files and folders are shared in a multiuser environment?
- How do you manage 2D and 3D content, and keep them updated?
- How do you manage asset creation, and how do you get started creating it?

Now make a list of what you did, or think you should do for each of the questions above.

(Note: Please come to the roundtable with your lists completed)

#1 - What are the most common mistakes made and how do you avoid them?

What mistakes have you discovered, or think they are?

#2 - What files and folders are shared in a multiuser environment?

What files and folders would you share, or think they are?

#3 - How do you manage 2D and 3D content, and keep them updated?

How do you manage 2D and 3D content, or what do you think?

#4 - How do you manage asset creation? How do you get started creating it?

How do you manage asset creation, or what do you think?
