

# More than the Model: A360 Teams for Architectural Project Management

Jerico Prater

Woods Bagot, Studio Design Technology Manager

Sean McDonald

Shen Milsom & Wilke, Global Design Technology Director

# Class summary

- Gone are the days of uploading models for consultants and sending PDF's back and forth for markups. With A360 Team (soon to be BIM 360 Team) project team members can now host their live Revit models in one place making collaboration incredibly easy. In addition to centralized model hosting, A360 Team allows team members to share 2D and 3D data, view multiple file formats directly in your browser, review and markup documents in real time with your team, and search across all files in the project to find information quickly. In addition to hosting live project information, A360 Teams supports versioning so team members can quickly compare changes between documents and models.
- This class will demonstrate effective workflows for using the various features of A360 Team for coordination and collaboration on projects. We will explore the differences when using the platform for internal coordination within a single firm versus external coordination with many firms in the same A360 Team space. We will show how to utilize the commenting tools to effectively coordinate, reducing printing needs or the need to employ additional software platforms.
- Additionally, we will demonstrate workflows utilizing the Wiki feature of A360 Team to capture critical project information, such as design guidelines and best practices, and document ongoing updates thus enabling greater team understanding of the project and reducing conflicts. This session features A360 Team and Collaboration for Revit.

# Key learning objectives

At the end of this class, you will be able to:

- Collaborate effectively on projects using A360 Teams
- Understand the benefits of using A360 Teams for internal versus external collaboration
- Utilize the Wiki feature to track design decisions in the cloud
- Reduce printing by utilizing digital markups

# Why A360 Teams?

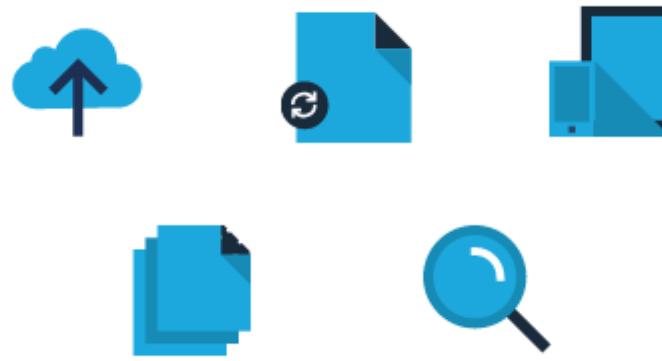

# Immediate access to project data

- Cloud hosted files are accessible from any location for all team members\*
- Upload any file to A360 and share a link instantly
- Mobile access to projects and files

# Find the right information at the right time

- Versioning ensures that all team members are working from the most current information
- Quickly find project information across multiple models and files and project activity feeds\*

# Communicate intelligently

- Live markups connected to data\*
- Web-based viewing of 2D & 3D files
- Relational metadata allows users to understand component relationships including drawings & views

(\*and what to know before you start...)

- **Client & consultant relationships are extremely important! Success requires trust, an open mind, and a willingness to change.**
- Contracts may need to be adjusted
- Office “Standards” may need to be adjusted
  - Model organization strategy, view types, naming conventions, etc.
- Still need local file storage and may need additional platforms
- Understand the limitations of A360
  - Limits on file size and number of users, publishing and markup behavior, etc.
- Understand your team limitations
  - What happens if you have team members who can't / won't use A360?
  - What skills & expertise do you need on your team?

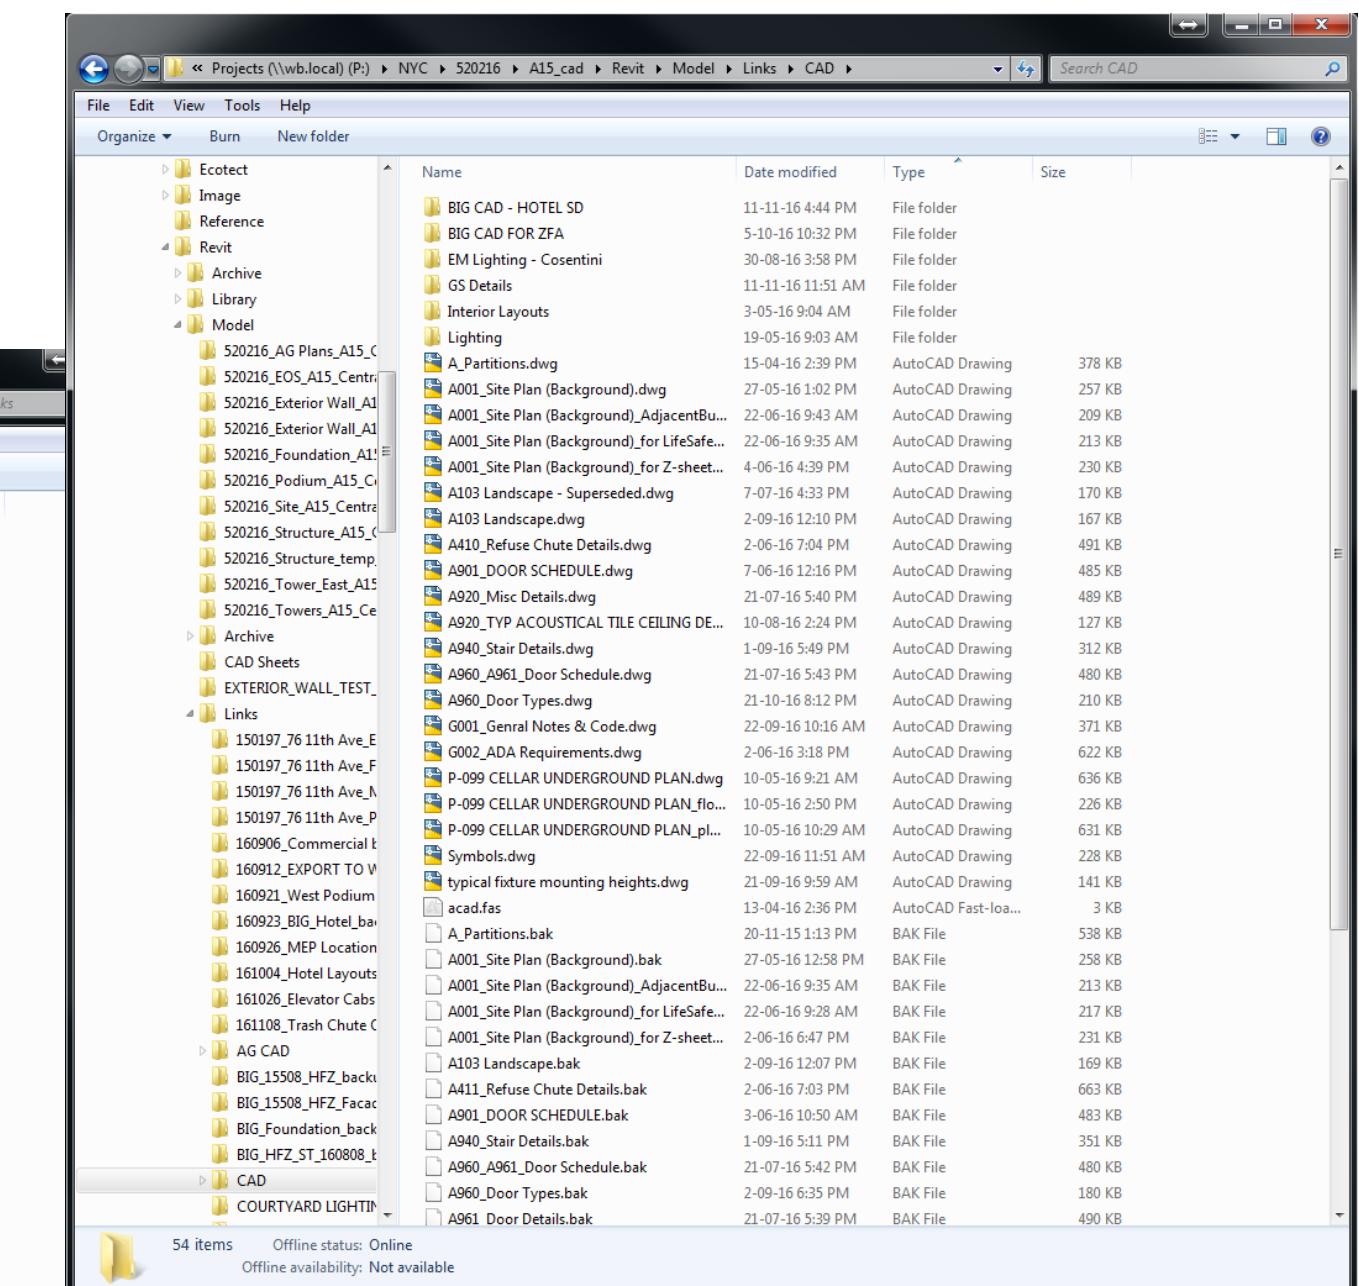

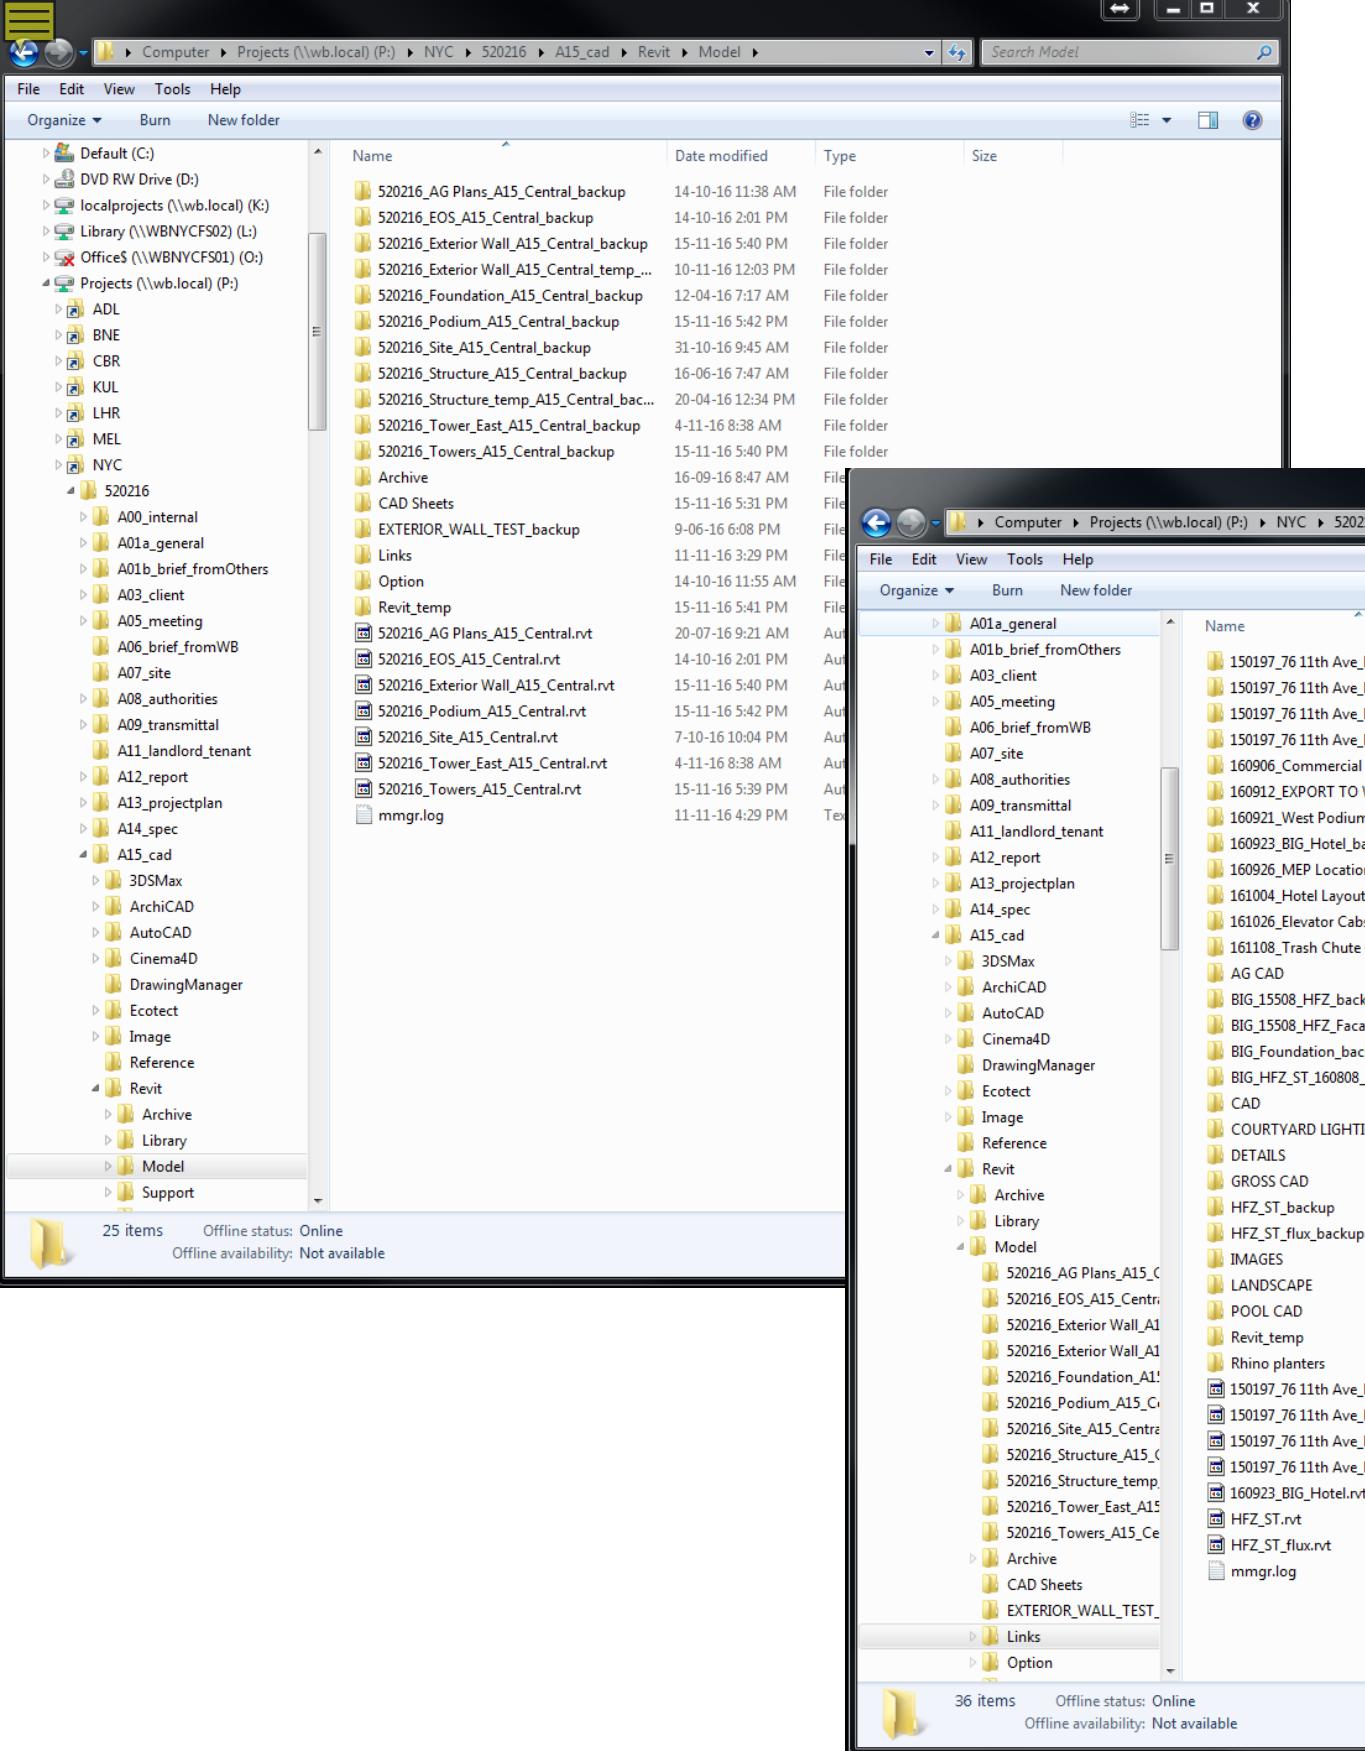

An aerial photograph of a dense urban area, likely Hong Kong, showing a mix of traditional and modern architecture. In the foreground, there are numerous high-rise residential buildings with white and grey facades. A prominent modern skyscraper with a glass and steel facade stands on the left. The area is built on reclaimed land, with a large artificial island visible in the background. The water is a deep blue, and several boats are scattered across the surface. The overall scene is a blend of natural and human-made environments.

The screenshot shows a Autodesk A360 interface with a building floor plan. The top left shows the navigation bar: Home > A360 Architect...ent > 520216\_WB\_Podi...rvt > V.3. The top right has an Overview button and other icons. The main area displays a detailed floor plan with various rooms, walls, and technical annotations. A red wavy line highlights a specific area in the lower-left quadrant. A callout box labeled 'TRENCH DRAIN' points to a specific location. A small inset image shows a 'RAISED ROOM' with a 'FAN RM 1221 SF'. The top right corner features a 'COMMENTS' panel with a blue header 'COMMENTS' and '2 comments in this version'. It includes an 'Add a new comment' input field and a 'Version 3 (2 Comments)' section. The first comment is from 'Matthew Nelson' at 5:22 PM, Nov 15, 2016, with a small thumbnail image. The second comment is from 'Jerico Prater' at 6:22 PM, Nov 15, 2016, with the text 'will coordinate trench location with consultants' and a 'Reply' button. The bottom right corner shows a 'MEASURE' panel with a dark background. It displays two vertex measurements: '1 Vertex' with a height of '~ 3' 0"' and 'Delta X = ~ 2' 9-5/8"' and 'Delta Y = ~ 1' 1"'; and '2 Vertex' with the same dimensions. The 'Unit type' is set to 'Feet and fractional inches' and 'Precision' is set to '1/8'. A 'Restart' button is at the bottom. A toolbar with various icons is at the bottom of the interface.

## Automation Processes

Created at 9:36, November 12, 2016 | Last updated by Jerico Prater | Nov 13, 2016

There are several automation processes being used on this project. Each process is outlined below with links to the necessary support files.

### Apartment numbers and areas:

Apartments are tagged in the Towers model via Revit rooms. There are shared parameters in the rooms for the apartment unit number and apartment area. The apartment area plans are maintained in the Towers model and once the areas are updated (boundaries and name/unit number), we use a Dynamo definition to push that information into the corresponding rooms. The script can be found [here](#).

### Area boundary lines:

Gross building areas are calculated at the exterior face of the enclosure (massing) at a height of 8" above the TOFF level. We use a Dynamo definition to create the area boundary lines, the script can be found [here](#).

### Gypsum board column furring:

The gypsum board column furring throughout the building along the perimeter is generated via Grasshopper and Dynamo. This allows us to coordinate with the structural model, maintain consistency in the column wrapping, and maintain minimum clearances. This is part of the Exterior Wall workflow, supporting files can be found [here](#).

### Edge of Slab (EOS) coordinates:

SECTION 054000  
COLD-FORMED METAL FRAMING

**PART 1 - GENERAL**

**1.1 GENERAL REQUIREMENTS**

A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents and Codes of Governing Agencies having jurisdiction.

**1.2 SECTION INCLUDES**

A. Work of this Section includes labor, materials, equipment and services necessary to complete the fabrication and installation of cold-formed metal framing and related work as shown on the Drawings and specified herein, including but not limited to, the following:

1. Exterior non-load-bearing wall framing.
2. Soffit framing.

**1.3 PREINSTALLATION MEETINGS**

A. Preinstallation Conference: Conduct conference at Project site.

**1.4 SUBMITTALS**

A. Product Data: For each type of cold-formed steel framing product and accessory.

B. Shop Drawings:

1. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
3. Submit, for Architect's information, signed and sealed calculations by the Delegated Design professional engineer for the cold formed metal framing and connections.

C. Delegated-Design Submittal: For cold-formed steel framing.

# Summary / pros & cons

- Linked file workflow is painful
- Wiki is limited
  - Formatting options, mentions, hierarchy, images, versioning
- Markups are not robust
  - Would like action items, issue tracking, push forward options
- Communicator has limitations
- Publishing settings are lacking
  - Would like to be able to publish multiple sets (QC, Construction, etc)
- Some features are unclear or not useful yet
  - Layer manager, calendar, live review session
